

UA Measurement WG Meeting

12 December 2019

Attendees

Abdalmonem Galila
Dennis Tan Tanaka
Dessalegn Yehuala
Marc Blanchet
Pitinan Kooarmornpatana
Sarmad Hussain

Agenda

1. SOW CMS [https://docs.google.com/document/d/12L5fgTOD5ITbqJ9y-1vPwZgAwOu5EST4PtotqmShpnE/edit?usp=sharing \[docs.google.com\]](https://docs.google.com/document/d/12L5fgTOD5ITbqJ9y-1vPwZgAwOu5EST4PtotqmShpnE/edit?usp=sharing [docs.google.com]) (30 min)
2. Annual Report (10 min)
3. AOB

Meeting Notes

Scope of Work on CMS

The WG discussed that beyond core, the CMSs also have extensions. Relevant extension would include those for emailing, authentication and event management. The members discussed that middleware, drivers include all the artifacts needed for installing the CMSs. It was suggested to also add tools for the OS.

The work should look at commonly used few extensions, and the WG should try to fill in some specific extensions. Some concrete examples were discussed and raised if such specific extensions should be tested as there may be a multitude of such extensions. Content management framework (e.g. Django) was also suggested to be added.

The group will focus on mainstream CMSs. Moodle should be deleted as it is a learning management system. Others could be taken up later. Further, should the CMSs be tested only on desktop mobile platforms or also on mobile. The members considered both options, but suggested including mobile in scope to a limited extent, e.g. as some people use tablets for development and there are also end users who may be interacting using a mobile phone.

In addition, the operating systems were also discussed. The group concluded that variation in the OS on the consumer end is not relevant, as that will be dependent on the browser. For the server end, the OS may be relevant to consider. It is also important to manage the scope of testing.

For 2020, the timing slots will be revised based on the doodle poll.

Action items

No.	Action Item	Owner
1	Continue to work on the CMS SOW document	All
