Universal Acceptance

UA Measurement WG Meeting
20 September 2021

Attendees
Nabil Benamar
Vadim Mikhaylov
Fionna Pallock
Sarmad Hussain
Seda Akbulut

Agenda
1. Welcome and roll call
2. Discussing SOW Action Plan
3. Plan next set of work items
4. AOB

Meeting Notes

In this meeting, it was decided to take two things from FY22 Action Plan first:
- The first is online web hosting tools to check their UA readiness.
- Second thing is to continue working on Content Management Systems (CMS). This is the last year work and we can expand that.

There are two kinds of tools: open source, and paid services.
Idea is to look at both based on their popularity.
There is an advantage in this work as we built a know-how on testing these systems.

Web hosting tools like cPanel do not support UA properly. To develop SOW for such software, we need to look at the **services** what cPanel should provide to be UA compliant. In SOW, we need to specify what should be done for testing of such software.

It was decided to start with the web hosting tools first as part of "M2" item in the FY22 Action Plan. We might need to look at software popularity **geographically.** List of URLs were shared in this regard and then it was decided to **shortlist** them. And then the group will come up with a **testing plan** for cPanel and similar platforms. Following are the links of the websites from which shortlisting can be done:

- URL for the 15 Best cPanel https://www.guru99.com/best-cpanel-alternatives.html
- Comparison of 12cPanel software: https://blog.ssdnodes.com/blog/cpanel-alternatives-vps/
- Russian regional list for hosting panels: https://tagline.ru/hosting-panels-rating/

There is a need to keep in mind the potential usage of each software (web hosting tools). We might also need to keep in mind how active the community is for a particular tool during shortlisting. Usually, it is hard to interact with the community of open-source software as compared to paid software.

The agenda of next meeting was identified as discussing further on the main framework of the SOW document.

Next meeting: Monday 4 October 2021 UTC 1400-1500

Action items

No.	Action Item	Owner
1	Provide list of software used in Russian region	Vadim
2	List of popular software (global and for other regions)	Sarmad
3	Review of the SOW document	Sarmad / Seda
4	Go through the list in those URLs. Review and compare from the following aspects offline to shortlist: • Open source (free) / Commercial (paid) • UA-ready / not UA-ready	All
