

Restored Names Accuracy Policy

As of [INSERT Registration Data Policy Effective Date] this Policy was updated to reflect changes required to implement the Registration Data Policy.

When a registrar restores a name (from the redemption grace period) that had been deleted on the basis of submission of false contact data or non-response to registrar inquiries, the name must be placed on Registrar Hold status until the Registered Name Holder has provided updated and accurate contact information.

Notes

The Restored Names Accuracy Policy is one of four [Consensus Policy recommendations](#) on Registration Data Accuracy and Bulk Access from the GNSO Council, and was [approved by the ICANN Board of Directors](#). This Policy went into effect 12 November 2004. This Policy applies to all ICANN-Accredited registrars pursuant to the Consensus Policies provision (§4.1) in the Registrar Accreditation Agreement.

For additional background concerning the Redemption Grace Period, please refer to the Technical Steering Group's Implementation Proposal at <http://www.icann.org/bucharest/redemption-topic.htm>.
