

## Final Report of the Temporary Specification for gTLD Registration Data Phase 2 Expedited Policy Development Process

[Date]

### Status of This Document

---

This is the Final Recommendations Report of the GNSO Expedited Policy Development Process (EPDP) Team on the Temporary Specification for gTLD Registration Data Phase 2 for submission to the GNSO Council.

### Preamble

---

The objective of this Final Report is to document the EPDP Team's: (i) deliberations on charter questions, (ii) input received on the EPDP's Phase 2 Initial Report and the EPDP Team's subsequent analysis, (iii) policy recommendations and associated consensus levels, and (iv) implementation guidance, for GNSO Council consideration.

# 1 Executive Summary

## 1.1 Background

On 17 May 2018, the ICANN Board of Directors (ICANN Board) adopted the [Temporary Specification for generic top-level domain \(gTLD\) Registration Data](#) (“Temporary Specification”). The Temporary Specification provides modifications to existing requirements in the Registrar Accreditation and Registry Agreements in order to comply with the European Union’s General Data Protection Regulation (“GDPR”).<sup>1</sup> In accordance with the ICANN Bylaws, the Temporary Specification will expire on 25 May 2019.

On 19 July 2018, the GNSO Council [initiated](#) an Expedited Policy Development Process (EPDP) and [chartered](#) the EPDP on the Temporary Specification for gTLD Registration Data team. In accordance with the Charter, EPDP team membership was expressly limited. However, all ICANN Stakeholder Groups, Constituencies and Supporting Organizations interested in participating are represented on the EPDP Team.

During phase 1 of its work, the EPDP Team was tasked to determine if the Temporary Specification for gTLD Registration Data should become an ICANN Consensus Policy as is, or with modifications. This Final Report concerns phase 2 of the EPDP Team’s charter which covers: (i) discussion of a system for standardized access/disclosure to nonpublic registration data, (ii) issues noted in the [Annex to the Temporary Specification for gTLD Registration Data](#) (“Important Issues for Further Community Action”), and (iii) outstanding issues deferred from Phase 1, e.g., legal vs. natural persons, redaction of city field, et. al. For further details, please see [here](#).

In order to organize its work, the EPDP Team agreed to divide its work into priority 1 and priority 2 topics. Priority 1 consists of the SSAD and all directly-related questions. Priority 2 includes the following topics:

- Display of information of affiliated vs. accredited privacy / proxy providers
- Legal vs. natural persons
- City field redaction
- Data retention
- Potential Purpose for ICANN’s Office of the Chief Technology Officer
- Feasibility of unique contacts to have a uniform anonymized email address
- Accuracy and WHOIS Accuracy Reporting System

<sup>1</sup> The GDPR can be found at <https://eur-lex.europa.eu/eli/reg/2016/679/oj>; for information on the GDPR see, <https://ico.org.uk/for-organisations/guide-to-the-general-data-protection-regulation-gdpr/lawful-basis-for-processing/contract/>.

39 The EPDP Team agreed that priority should be given to completing the deliberations for  
40 priority 1 items. It agreed, however, that where feasible, the Team would also  
41 endeavor to make progress on priority 2 items in parallel.

## 42 1.2 Initial Report and Addendum to Initial Report

43  
44 On 7 February 2020, the EPDP Team published its [Initial Report for public comment](#).  
45 The Initial Report outlined the core issues discussed in relation to the proposed System  
46 for Standardized Access/Disclosure to non-public gTLD registration data ("SSAD") and  
47 accompanying preliminary recommendations.

48  
49 On 26 March 2020, the EPDP Team published an Addendum to the Initial Report for  
50 public comment. The Addendum concerns the EPDP Team's preliminary  
51 recommendations and/or conclusions on the priority 2 items as listed above.

52  
53 Following the publication of the Initial Report and the Addendum to the Initial Report,  
54 the EPDP Team: (i) continued to seek guidance on legal issues, (ii) carefully reviewed  
55 Public Comments received in response to the publication of the Initial Report and  
56 Addendum, (iii) continued to review the work-in-progress with the community groups  
57 the Team members represent, and (iv) continued its deliberations for the production of  
58 this Final Report that will be reviewed by the GNSO Council and, if approved,  
59 forwarded to the ICANN Board of Directors for approval as an ICANN Consensus Policy.  
60 Consensus calls on the recommendations contained in this Final Report, as required by  
61 the GNSO Working Group Guidelines, were carried out by the EPDP Team Chair, as  
62 described here: [\[include link\]](#).

63  
64 **Recommendations for GNSO Council consideration** (see chapter 3 for full text of  
65 recommendations):

66  
67 SSAD Recommendations:

122		
123		
124		

125 As a result of external dependencies and time constraints, this Final Report does not  
126 address all priority 2 items. Specifically, the following items are not addressed:

Deleted: .

127  
128 Legal vs. natural persons: Although the issue did get some consideration in Phase 2,  
129 this did not result in agreement on new policy recommendations. The requested study  
130 on this topic was received too late in the process to receive due consideration. As a  
131 result, per the EPDP Phase 1 recommendations, Registrars and Registry Operators are  
132 permitted to differentiate between registrations of legal and natural persons, but are  
133 not obligated to do so. Further work on this issue (including consideration of ICANN  
134 org’s Differentiation between Legal and Natural Persons in Domain Name Registration  
135 Data Directory Services (RDDS) Study) is under consideration by the GNSO Council.”

136  
137 Feasibility of unique contacts to have a uniform anonymized email address: The EPDP  
138 Team received legal guidance that indicated that the publication of uniform masked  
139 email addresses results in the publication of personal data; which indicates that wide  
140 publication of masked email addresses may not be currently feasible under the GDPR.  
141 Further work on this issue is under consideration by the GNSO Council.

142  
143 The EPDP Team will consult with the GNSO Council on how to address the remaining  
144 priority 2 items.

### 145 1.3 Conclusions and Next Steps

146  
147 This Final Report will be submitted to the GNSO Council for its consideration and  
148 approval.

### 149 1.4 Other Relevant Sections of this Report

150  
151 For a complete review of the issues and relevant interactions of this EPDP Team, the  
152 following sections are included within this Final Report:

- 153 ■ Background of the issues under consideration;
- 154 ■ Documentation of who participated in the EPDP Team’s deliberations, including  
155 attendance records, and links to Statements of Interest, as applicable;
- 156 ■ An annex that includes the EPDP Team’s mandate as defined in the Charter  
157 adopted by the GNSO Council; and
- 158 ■ Documentation on the solicitation of community input through formal SO/AC and  
159 SG/C channels, including responses.

160

161

## 2 EPDP Team Approach

163

164 This Section provides an overview of the working methodology and approach of the  
165 EPDP Team. The points outlined below are meant to provide the reader with relevant  
166 background information on the EPDP Team's deliberations and processes and should  
167 not be read as representing the entirety of the efforts and deliberations of the EPDP  
168 Team.

### 2.1 Working Methodology

169

170  
171 The EPDP Team began its deliberations for phase 2 on 2 May 2019. The Team agreed to  
172 continue its work primarily through conference calls scheduled one or more times per  
173 week, in addition to email exchanges on its mailing list. Additionally, the EPDP Team  
174 held four face-to-face meetings: the first set of face-to-face discussions took place at  
175 the ICANN65 Public Meeting in Marrakech, Morocco, two dedicated set of face-to-face  
176 meetings, the second and fourth meeting, were held at the ICANN headquarters in Los  
177 Angeles (LA) in September 2019 and January 2020, and the third face-to-face discussion  
178 took place at the ICANN66 Public Meeting in Montreal, Canada. All of the EPDP Team's  
179 meetings are documented on its wiki [workspace](#), including its [mailing list](#), draft  
180 documents, background materials, and input received from ICANN's Supporting  
181 Organizations and Advisory Committees, including the GNSO's Stakeholder Groups and  
182 Constituencies.

183

184 The EPDP Team also prepared a [Work Plan](#), which was reviewed and updated on a  
185 regular basis. In order to facilitate its work, the EPDP Team used a template to tabulate  
186 all input received in response to its request for Constituency and Stakeholder Group  
187 statements (see Annex D). This template was also used to record input from other  
188 ICANN Supporting Organizations and Advisory Committees and can be found in Annex  
189 D.

190

191 The EPDP Team held a [community session](#) at the ICANN66 Public Meeting in Montreal,  
192 during which it presented its methodologies and preliminary findings to the broader  
193 ICANN community for discussion and feedback.

### 2.2 Mind Map, Worksheets and Building Blocks

194

195  
196 In order to ensure a common understanding of the topics to be addressed as part of its  
197 phase 2 deliberations, the EPDP Team mapped the topics using the following mind  
198 maps, which allowed for the regrouping and consolidation of topics (see [mind map](#)).  
199 This formed the basis for the subsequent development of the priority 1 and priority 2  
200 worksheets (see [worksheets](#)) which the EPDP Team used to capture:

201

- Issue description / related charter questions

202

- Expected deliverable

- 203 ● Required reading
- 204 ● Briefings to be provided
- 205 ● Legal questions
- 206 ● Dependencies
- 207 ● Proposed timing and approach

208  
209 The EPDP Team Chair also put forward a number of working definitions to ensure  
210 consistent terminology and a shared understanding of terms used during the EPDP  
211 Team’s deliberations (see [working definitions](#)).

212  
213 Following the review of a number of real life [use cases](#), the EPDP Team established a  
214 set of building blocks that the System for Standardized Access/Disclosure (“SSAD”)  
215 would consist of, recognizing that a decision on the roles and responsibilities of the  
216 different parties involved may be influenced by both legal advice and guidance from  
217 the European Data Protection Board (“EDPB”).

### 218 2.3 Priority 1 and Priority 2 Topics

219  
220 In order to organize its work, the EPDP Team agreed to divide its work into priority 1  
221 and priority 2 topics. Priority 1 consists of the SSAD and all directly-related questions.  
222 Priority 2 includes the following topics:

- 223
- 224 ● Display of information of affiliated vs. accredited privacy / proxy providers
- 225 ● Legal vs. natural persons
- 226 ● City field redaction
- 227 ● Data retention
- 228 ● Potential Purpose for ICANN’s Office of the Chief Technology Officer
- 229 ● Feasibility of unique contacts to have a uniform anonymized email address
- 230 ● Accuracy and WHOIS Accuracy Reporting System

231  
232 The EPDP Team agreed that priority should be given to completing the deliberations for  
233 priority 1 items. It agreed, however, that where feasible, the Team would also  
234 endeavor to make progress on priority 2 items in parallel.

235  
236 As a result of external dependencies and time constraints, this Final Report does not  
237 address all priority 2 items. Specifically, the following items are not addressed:

238  
239 Legal vs. natural persons: Although the issue did get some consideration in Phase 2,  
240 this did not result in agreement on new policy recommendations. The requested study  
241 on this topic was received too late in the process to receive due consideration. As a  
242 result, per the EPDP Phase 1 recommendations, Registrars and Registry Operators are  
243 permitted to differentiate between registrations of legal and natural persons, but are  
244 not obligated to do so. Further work on this issue (including consideration of ICANN

245 [org's Differentiation between Legal and Natural Persons in Domain Name Registration](#)  
246 [Data Directory Services \(RDDS\) Study](#) is under consideration by the GNSO Council."

247  
248 [Feasibility of unique contacts to have a uniform anonymized email address: The EPDP](#)  
249 [Team received legal guidance that indicated that the publication of uniform masked](#)  
250 [email addresses results in the publication of personal data; which indicates that wide](#)  
251 [publication of masked email addresses may not be currently feasible under the GDPR.](#)  
252 [Further work on this issue is under consideration by the GNSO Council.](#)

## 253 2.4 Legal Committee

254  
255 Recognizing the complexity of many issues the EPDP Team was chartered to work  
256 through in Phase 2, the EPDP Team requested resources for the external legal counsel  
257 of Bird & Bird. To assist in preparing draft legal questions for Bird & Bird, EPDP  
258 Leadership chose to assemble a [Legal Committee](#), comprised of [members of the EPDP](#)  
259 [Team with legal experience](#).

260  
261 The Phase 2 Legal Committee worked together to review questions proposed by the  
262 members EPDP Team to ensure:

- 263 1. the questions were truly legal in nature, as opposed to policy or policy  
264 implementation questions;
- 265 2. the questions were phrased in a neutral manner, avoiding both presumed  
266 outcomes as well as constituency positioning;
- 267 3. the questions were both apposite and timely to the EPDP Team's work; and  
268 4. the limited budget for external legal counsel was used responsibly.

269  
270  
271 The Legal Committee presented all agreed-upon questions to the EPDP Team for its  
272 final sign-off before sending questions to Bird & Bird, [with the exception of the](#)  
273 [questions on automation of decision making](#).

274  
275 To date, the EPDP Team agreed to send eight SSAD-related questions to Bird & Bird.  
276 The full text of the questions and executive summaries of the legal advice received in  
277 response to the questions can be found in Annex F.

## 278 2.5 Charter Questions

279  
280 In addressing the charter questions,<sup>2</sup> the EPDP Team considered both (1) the input  
281 provided by each group as part of the deliberations; (2) relevant input from phase 1; (3)  
282 the input provided by each group in response to the request for [Early Input](#) in relation  
283 to the specific charter questions; (4) the required reading identified for each topic in

---

<sup>2</sup> Annex A covers in further detail the linkage between each of the topics addressed in the recommendations and the relevant charter questions.

Deleted: one

Deleted: from each SO/AC represented on the EPDP Team...

---

287 the [worksheets](#), (5) [input provided in response to the public comment forums](#), and (6)  
288 [input](#) provided by the EPDP Team's legal advisors, Bird & Bird.  
289

## 3 EPDP Team Responses to Charter Questions & Recommendations

After reviewing public comments on the Initial Report and the Addendum to the Initial Report, the EPDP Team presents its recommendations for GNSO Council consideration. This Final Report states the level of consensus within the EPDP Team achieved for the different recommendations. [Placeholder for consensus level statement]. Only in relation to the SSAD related recommendations, the EPDP Team considers these interdependent and as a result, these must be considered as one package by the GNSO Council and subsequently the ICANN Board.

Deleted: 1

Note: During Phase 1 of the EPDP Team's work, the EPDP Team was tasked with reviewing the Temporary Specification. The [Temporary Specification](#) was established as a response to the GDPR.<sup>3</sup> Accordingly, the GDPR is the only law that is specifically referenced in this report. The EPDP team has deliberated whether this Final Report could be drafted in a way that is agnostic to any specific law, but the EPDP Team determined that the report would benefit from explicit references to facilitate the implementation of the Team's recommendations. The GDPR is a regional law covering multiple jurisdictions and - given the strict criteria it contains - compliance with this law has a high probability of being compliant with other national [or applicable regional](#) data protection laws. The EPDP team fully endorses ICANN's aspiration to be globally inclusive, and nothing in this report shall overturn the basic principle that contracted parties can and must comply with locally applicable statutory laws and regulations.

Deleted: extensively

### 3.1 System for Standardized Access/Disclosure to Non-Public Registration Data (SSAD)

In Annex A, further details are provided in relation to the approach and the materials that the EPDP Team reviewed in order to address the charter questions and develop the following recommendations.

As part of its deliberations, the EPDP Team considered a centralized model, in which both requests and disclosure authorization would be done by ICANN or its delegated processor, and a decentralized model, in which both requests and disclosure decisions would be handled by contracted parties. The Team was not able to agree on either option and instead put forward a hybrid model in which requests would be centralized and disclosure decisions would typically (in the initial implementation) be made by

<sup>3</sup> "This Temporary Specification for gTLD Registration Data (Temporary Specification) establishes temporary requirements to allow ICANN and gTLD registry operators and registrars to continue to comply with existing ICANN contractual requirements and community-developed policies in light of the GDPR."

329 contracted parties. The hybrid model SSAD is based on the following high-level  
330 principles:

- 332 • The receipt, authentication, and transmission of SSAD requests to the  
333 Contracted Party must be fully automated insofar as it is technically and  
334 commercially feasible and legally permissible. Disclosure decisions will typically  
335 (in the initial implementation) by made by the Contracted Party and should be  
336 automated only where technically and commercially feasible and legally  
337 permissible. In areas where automation does not meet these criteria,  
338 standardization of the disclosure decision process is the baseline objective.  
339 Experience gained over time with SSAD disclosure requests and responses must  
340 inform further streamlining and standardization of responses.
- 341 • In recognition of the need for experience-based adjustments in the function of  
342 SSAD, there should be a GNSO Standing Committee, which will monitor the  
343 implementation of the SSAD and recommend improvements that could be  
344 made. Improvements recommended through this process must not violate the  
345 policies established by the EPDP, data protection laws, ICANN Bylaws, or GNSO  
346 Procedures and Guidelines.
- 347 • Service level agreements (SLAs) need to be put in place and be enforceable, but  
348 these may need to be of an evolutionary nature to recognize that there will be a  
349 learning curve.
- 350 • Responses to disclosure requests, regardless of whether review is conducted  
351 manually or an automated responses is triggered, are returned from the  
352 relevant Contracted Party directly to the Requestor, but appropriate logging  
353 mechanisms must be in place to allow for the SSAD to confirm that SLAs are  
354 met and responses are being processed according to the policy (for example,  
355 the Central Gateway MUST be notified when disclosure requests are rejected or  
356 granted).

**Deleted:** As part of its deliberations, the EPDP Team considered various models but agreed to put the following SSAD model forward for public comment. This SSAD model is based on the following high-level principles/concepts:

357 The benefits of this model are:

358 **Single location to submit requests**

- 359 • Reduces time and effort spent by requestors to track down individual points of  
360 contact or follow individual procedures
- 361 • Ensures that requests are routed directly to the responsible party at each  
362 disclosing entity, thereby eliminating the uncertainty that requests are not  
363 received or go to someone unqualified to process them
- 364 • Allows for clear outreach opportunities to socialize the location and method for  
365 requesting non-public registration data
- 366 • Requests and responses can be tracked to see if there is compliance with the  
367 SLAs

**Deleted:** requester

**Deleted:** for

**Deleted:** adherence

369 **Standardized request forms**

- 377
- 378
- 379
- 380
- 381
- 382
- Reduces the number of disclosure requests that are denied due to insufficient information
  - Increases the efficiency with which disclosing entities can review requests
  - Reduces uncertainty for requestors who now have a standard/uniform set of data to provide when submitting disclosure requests.
  - Reduces the need for individual set of required information by disclosing parties

Deleted: requester

383 **Built-in authentication process**

- 384
- 385
- 386
- 387
- Speeds up the review process for disclosing entities as they will not need to re-verify the Requestor
  - External assurance that Requestors have been verified can increase the likelihood and/or speed of disclosure

388 **Standardized review and response process**

- 389
- 390
- 391
- 392
- 393
- 394
- 395
- 396
- 397
- 398
- 399
- Allows creation of a common response format
  - Allows creation of rules, guidelines, and best practices disclosing parties can follow in reviewing and responding to requests
  - Allows adoption of common response review system
  - Allows automation of certain yet-to-be-defined requests by yet-to-be-defined Requestors
  - Facilitates automated disclosure decision making in some scenarios
  - The logging of requests and responses also allows ICANN Org to audit the actions of disclosing entities, identifying any instances of systemic non-compliance, and take appropriate enforcement action

400 **Main SSAD Roles & Responsibilities:**

- 401
- 402
- 403
- 404
- 405
- 406
- 407
- 408
- 409
- 410
- 411
- 412
- 413
- 414
- 415
- 416
- 417
- 418
- Central Gateway Manager – role performed by or overseen by ICANN Org. Responsible for managing intake and routing of SSAD requests that require manual review to responsible Contracted Parties. Responsible for managing and directing requests that are confirmed to be automated to Contracted Parties for release of data, consistent with the criteria established and agreed to in these policy recommendations or based on the recommendation of the GNSO Standing Committee for the review of the implementation of policy recommendations concerning SSAD. Responsible for collecting data on requests, responses, and disclosure decisions taken.
  - Accreditation Authority – role performed by or overseen by ICANN Org. A management entity who has been designated to have the formal authority to "accredit" users of SSAD, i.e., to confirm and verify the identity of the user (represented by an Identifier Credential) and assertions (or claims) associated with the Identity Credential (represented by Signed Assertions).
  - Identity Provider - Responsible for 1) Verifying the identity of a Requestor and managing an Identifier Credential associated with the Requestor, 2) Verifying and managing Signed Assertions associated with the Identifier Credential. For

420 the purpose of the SSAD, the Identity Provider may be the Accreditation  
 421 Authority itself or the Accreditation Authority may rely on zero or more third  
 422 parties to perform the Identity Provider services.

- 423 • Contracted Parties – Responsible for responding to disclosure requests that do  
 424 not meet the criteria for an automated response.<sup>4</sup>
- 425 • GNSO Standing Committee for the review of the implementation of policy  
 426 recommendations concerning SSAD – Committee representative of the ICANN  
 427 community responsible for evaluating SSAD operational issues emerging as a  
 428 result of adopted ICANN Consensus Policies and/or their implementation. The  
 429 GNSO Standing Committee is intended to examine data being produced as a  
 430 result of SSAD operations, and provide the GNSO Council with  
 431 recommendations on how best to make operational changes to the SSAD, which  
 432 are strictly implementation measures, in addition to recommendations based  
 433 on reviewing the impact of existing Consensus Policies on SSAD operations.

Formatted: Footnote Reference, Font: 12 pt, Font color: Black

Formatted: Footnote Reference, Font: (Default) Calibri, 11 pt, Font color: Auto, Not Superscript/ Subscript

434  
 435 It is the expectation that the different roles and responsibilities will be outlined in  
 436 detail and confirmed in the applicable agreements.

437  
 438 Below is a detailed breakdown of the underlying assumptions and policy  
 439 recommendations that the EPDP Team is putting forward for community input.

### 440 3.2 ICANN Board and ICANN Org Input

441  
 442 In order to help inform its deliberations, the EPDP Team reached out to both the ICANN  
 443 Board and ICANN Org “to understand the Board’s position on the scope of operational  
 444 responsibility and level of liability (related to decision-making on disclosure of non-  
 445 public registration data) they are willing to accept on behalf of the ICANN organization  
 446 along with any prerequisites that may need to be met in order to do so”.

447  
 448 ICANN Org provided its [response](#) on 19 November 2019, noting in part that “ICANN org  
 449 proposed that it could operate a gateway for authorized data to pass through. As noted  
 450 above, the gateway operator does not make the decision to authorize disclosure. In the  
 451 proposed model, the authorization provider would decide whether or not the criteria  
 452 for disclosure are met. If a request is authorized and authenticated, the gateway  
 453 operator would request the data from the contracted party and disclose the relevant  
 454 data set to the Requestor”.<sup>5</sup>

455  
 456 The ICANN Board provided its [response](#) on 20 November 2019 noting in part that “the  
 457 Board has consistently advocated for the development of an access model for non-

<sup>4</sup> As a default, the Central Gateway Manager will send disclosure requests to Registrars, but that does not preclude the Central Gateway Manager from sending disclosure requests to Registries in certain circumstances (see recommendation #5 for further details).

<sup>5</sup> Please note that the model described here is not the same as the SSAD model put forward in this report by the EPDP Team.

Deleted: s

458 public gTLD registration data. If the EPDP Phase 2 Team’s work results in a consensus  
 459 recommendation that ICANN org take on responsibility for one or more operational  
 460 functions within a SSAD, the Board would adopt that recommendation unless the  
 461 Board determined, by a vote of more than two-thirds, that such a policy would not be  
 462 in the best interests of the ICANN community or ICANN. Given the Board’s advocacy for  
 463 the development of an access model, and support for ICANN org’s dialogue with the  
 464 EDPB on a proposed UAM, it is likely that the Board would adopt an EPDP  
 465 recommendation to this effect”.

466  
 467 The EPDP Team posed a number of additional clarifying questions to ICANN org, and  
 468 they can be found, together with the responses here:

469 <https://community.icann.org/x/5BdlBg>. This input also included ICANN org’s cost  
 470 estimate for a proposed system for Standardized Access/Disclosure.

471  
 472 The EPDP Team considered this input, the [feedback received from the Belgian DPA](#), and  
 473 the input received during the public comment period, to make a final determination of  
 474 the division of roles and responsibilities in the SSAD.

### 475 3.3 SSAD Underlying Assumptions

476  
 477 The EPDP Team used the underlying assumptions outlined below to develop its policy  
 478 recommendations. These underlying assumptions do not necessarily create new  
 479 requirements for contracted parties; instead, the assumptions are designed to assist  
 480 both the readers of this Final Report and the ultimate policy implementers in  
 481 understanding the intent and underlying assumptions of the EPDP Team in putting  
 482 forward the SSAD model and related recommendations.

- 483
- 484 ● The objective of the SSAD is to provide a predictable, transparent, efficient, and
- 485 accountable mechanism for the access/disclosure of non-public registration
- 486 data.
- 487 ● The SSAD must be compliant with the GDPR.
- 488 ● The SSAD must have the ability to adhere to these policy principles and
- 489 recommendations.
- 490 ● Given the decisions made by the EPDP team regarding the SSAD model, the
- 491 working assumption is that ICANN and Contracted Parties will be Joint
- 492 Controllers. This designation is based on a factual analysis of the policy as is
- 493 proposed.

### 494 3.4 Conventions Used in this Document

495  
 496 The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD",  
 497 "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL"  
 498 in this document are to be interpreted as described in [BCP 148](#), [RFC2119](#), and [RFC8174](#).

Deleted: [

Deleted: ]

Deleted: [

Deleted: ]

504 Note: Noting the EPDP team’s choice of model, and pending the specific legal advice as  
505 to the responsibility of the parties and the identification as to the controllership of the  
506 data, as it applies to the proposed model, the EPDP team notes that certain  
507 statements, throughout the recommendations, may require refinement from  
508 mandatory to permissive and vice versa. (e.g., “Shall” to “should”, “MUST” to “MAY”,  
509 etc.).

510  
511 Where Implementation Guidance is referenced, the EPDP Team considers this  
512 supplemental context and/or clarifying information to help inform the implementation  
513 of the policy recommendations but the EPDP Team notes that implementation  
514 guidance does not have the same weight and standing as recommendation text to  
515 create policy.

## 516 3.5 EPDP Team SSAD Recommendations

### 517 3.5.1. Definitions

- 518 • **Accreditation** - An administrative action by which the accreditation authority  
519 declares that a user is eligible to use SSAD in a particular security configuration  
520 with a prescribed set of safeguards.
- 521 • **Accreditation Authority** - A management entity who has been designated to  
522 have the formal authority to “accredit” users of SSAD, i.e., to confirm and Verify  
523 the identity of the user (represented by an Identifier Credential) and assertions  
524 (or claims) associated with the Identity Credential (represented by Signed  
525 Assertions).
- 526 • **Accreditation Authority Auditor** – The entity responsible for carrying out the  
527 auditing requirements of the Accreditation Authority, as outlined in  
528 Recommendation #16 (Audits). The entity could be an independent body or, if  
529 ICANN Org ultimately outsources the role of Accreditation Authority to a third  
530 party, ICANN Org MAY be the Accreditation Authority Auditor.
- 531 • **Authentication** - The process or action of Validating the Identity Credential and  
532 Signed Assertions of a Requestor.
- 533 • **Authorization** - A process for approving or denying disclosure of non-public  
534 registration data.
- 535 • **Central Gateway Manager (CGM)** - role performed by or overseen by ICANN  
536 Org. Responsible for managing intake and routing of SSAD requests that require  
537 manual review to responsible Contracted Parties. Responsible for managing and  
538 directing requests that are confirmed to be automated to Contracted Parties for  
539 release of data, consistent with the criteria established and agreed to in these  
540 policy recommendations or based on the recommendation of the GNSO  
541 Standing Committee for the review of the implementation of policy  
542 recommendations concerning SSAD. Responsible for collecting data on  
543 requests, responses, and disclosure decisions taken.  
544  
545

- 546 • **De-accreditation of Accreditation Authority** – An administrative action by  
547 which ICANN org revokes the agreement with the accreditation authority, if this  
548 function is outsourced to a third party, following which it is no longer approved  
549 to operate as the accreditation authority.
- 550 • **Eligible government entity**: a government entity (including local government  
551 and International Governmental Organizations) that has a purpose to access  
552 non-public registration data for the exercise of a public policy task within its  
553 mandate.
- 554 • **Identity Credential**: A data object that is a portable representation of the  
555 association between an identifier and authenticated information, and that  
556 can be presented for use in Validating an identity claimed by an entity that  
557 attempts to access a system. Example: Username/Password, OpenID credential,  
558 X.509 public-key certificate.
- 559 • **Identity Provider** - Responsible for 1) Verifying the identity of a Requestor and  
560 managing an Identifier Credential associated with the Requestor and 2)  
561 Verifying and managing Signed Assertions associated with the Identifier  
562 Credential. For the purpose of the SSAD, the Identity Provider may be the  
563 Accreditation Authority itself or the Accreditation Authority may rely on zero or  
564 more third parties to perform the Identity Provider services.
- 565 • **Requestor** – An accredited user seeking disclosure of domain name registration  
566 data through the SSAD
- 567 • **Revocation of User Credentials**- The event that occurs when an Identity  
568 Provider declares that a previously valid credential has become invalid.
- 569 • **Signed Assertion**: A data object that is a portable representation of the  
570 association between an Identifier Credential and one or more access assertions,  
571 and that can be presented for use in Validating those assertions for an  
572 entity that attempts such access. Example: [OAuth credential], X.509 attribute  
573 certificate. Signed Assertions may be user-specific (e.g. to indicate professional  
574 affiliation or affirmation of lawful data handling processes) or request-specific  
575 (e.g. indicating the lawful basis for the disclosure request).
- 576 • **System for Standardized Access/Disclosure to non-public gTLD registration**  
577 data (SSAD) - The SSAD is the overall suite of parties and parts that make up the  
578 request, validation and disclosure system.
- 579 • **Validate/validation** - To test, prove or establish the soundness or correctness of  
580 a construct. (Example: The Discloser will Validate the Identity Credential and  
581 Signed Assertions as part of its Authorization process.)
- 582 • **Verify** - To test or prove the truth or accuracy of a fact or value. (Example:  
583 Identity Providers Verify the identity of the Requestor prior to issuing an  
584 Identity Credential.)
- 585 • **Verification** - The process of examining information to establish the truth of a  
586 claimed fact or value.

3.5.2. Recommendations

Deleted: “

Deleted: ”

Deleted: “

Deleted: ”

Deleted: ¶

595 **Recommendation #1. Accreditation<sup>6</sup>**

596  
597 1.1 The EPDP Team recommends the establishment of, or selection of, an  
598 Accreditation Authority.

600 1.2 The EPDP Team recommends that the Accreditation Authority establish a policy  
601 for accreditation of SSAD users in accordance with the recommendations  
602 outlined below.

604 1.3 The following recommendations MUST be included in the accreditation policy:

605 1.3.1. SSAD MUST only accept requests for access/disclosure from  
606 accredited organizations or individuals. However, accreditation  
607 requirements MUST accommodate any intended user of the  
608 system, including an individual or organization who makes a  
609 single request. The accreditation requirements for repeat users  
610 of the system and a one-time user of the system MAY differ.

611 1.3.2. Both legal persons and/or individuals are eligible for  
612 accreditation. An individual accessing SSAD using the credentials  
613 of an accredited entity (e.g. legal persons) warrants that the  
614 individual is acting on the authority of the accredited entity.

615 1.3.3. The accreditation policy defines a single Accreditation Authority,  
616 managed by ICANN org, which is responsible for the verification,  
617 issuance, and ongoing management of both Identity Credentials  
618 and Signed Assertions. The Accreditation Authority MUST  
619 develop a privacy policy. The Accreditation Authority MAY work  
620 with external or third-party Identity Providers that could serve as  
621 clearinghouses to Verify identity and authorization information  
622 associated with those requesting accreditation. The responsibility  
623 for the processing of personal data, regardless of the party  
624 carrying out that processing, shall remain with the Accreditation  
625 Authority. If ICANN org chooses to outsource the Accreditation  
626 Authority function or parts thereof, ICANN org will remain  
627 responsible for overseeing the party(ies) to which the function or  
628 parts thereof is/are outsourced. Overseeing MUST include  
629 monitoring for and addressing potential abuse by the party(ies)  
630 to which the function of parts thereof has been outsourced.

631 1.3.4. The decision to authorize disclosure of registration data, based  
632 on validation of the Identity Credential, Signed Assertions, and  
633 data as required in the recommendation concerning criteria and  
634 content of requests (Recommendation #3), will reside with the  
635 Registrar, Registry or the Central Gateway Manager, as  
636 applicable.

**1.4 Requirements of the Accreditation Authority**

- 1.4.1. Verify the Identity of the Requestor: The Accreditation Authority **MUST** verify the identity of the Requestor, resulting in an Identity Credential.
- 1.4.2. Management of Signed Assertions: The Accreditation Authority **MAY** verify and manage a set of dynamic assertions/claims associated with and bound to the Identity Credential of the Requestor. This verification, which may be performed by an Identity Provider, results in a Signed Assertion. Signed Assertions<sup>9</sup> convey information such as:
  - Assertion as to the purpose(s) of the request
  - Assertion as to the legal basis of the request
  - Assertion that the user identified by the Identity Credential is affiliated with the relevant organization
  - Assertion regarding compliance with laws (e.g., storage, protection and retention/disposal of data)
  - Assertion regarding agreement to use the disclosed data for the legitimate and lawful purposes stated
  - Assertion regarding adherence to safeguards and/or terms of service and to be subject to revocation if they are found to be in violation
  - Assertions regarding prevention of abuse, auditing requirements, dispute resolution and complaints process, etc.
  - Assertions specific to the Requestor – trademark ownership/registration for example
  - Power of Attorney statements, when/if applicable.
- 1.4.3. **MUST validate** Identity Credentials and Signed Assertions, in addition to the information contained in the request, facilitate the decision to accept or reject the Authorization of an SSAD request. For the avoidance of doubt, the presence of these credentials alone **MUST NOT** result in or mandate an automatic access / disclosure authorization. However, the ability to automate access/disclosure authorization decision making is possible under certain circumstances where lawful.
- 1.4.4. **The Accreditation Authority MUST define** a baseline “code of conduct”<sup>10</sup> that establishes a set of rules that contribute to the proper application of data protection laws – **such as** the GDPR, including:

**Deleted:** <sup>8</sup>

**Deleted:** Validation

**Deleted:** of

**Deleted:** DOES

**Deleted:** Define

**Deleted:** -

**Deleted:** including

<sup>9</sup> For clarity, Signed Assertions are dynamic and may change based on the request (purpose, legal basis, type, urgency, etc.) compared to an Identifier Credential, which is static and typically does not change. Signed assertions are only used to associate/bind attributes to an identity. These attributes are dynamic per request, but can be vetted and managed up front as part of the Accreditation Process as needed. The Accreditation Authority can establish various assertions for a specific Identifier Credential up front or dynamically create them on a per request basis. How this is determined is to be further worked out in the implementation phase. The Accreditation Authority may store multiple Signed Assertions per Identifier Credential, but the Requestor must invoke the relevant assertions per request.

<sup>10</sup> For the avoidance of doubt, the code of conduct referenced here is not intended to refer to the Code of Conduct as described in the GDPR. The code of conduct referenced here refers to a set of rules and standards to be followed by the Accreditation Authority.

**Deleted:** It should not be the objective to attach as many signed assertions as possible to a request.

- 687 • A clear and concise explanatory statement.
- 688 • A defined scope that determines the processing operations covered (the
- 689 focus for SSAD would be on the Disclosure operation.)
- 690 • Mechanism that allow for the monitoring of compliance with the
- 691 provisions.
- 692 • Identification of an Accreditation Authority Auditor (a.k.a. monitoring
- 693 body) and definition of mechanism(s) which enable that body to carry
- 694 out its functions.
- 695 • Description as to the extent a “consultation” with stakeholders has been
- 696 carried out.
- 697 1.4.5. The Accreditation Authority MUST develop a privacy policy for the
- 698 processing of personal data it undertakes as well as terms of service for
- 699 its accredited users (as outlined in recommendation #11).
- 700 1.4.6. Develop a baseline application procedure: The Accreditation Authority
- 701 MUST develop a uniform baseline application procedure and
- 702 accompanying requirements for all Identity Providers (when applicable)
- 703 and all applicants requesting accreditation, including:
- 704 i. Accreditation timeline
- 705 ii. Definition of eligibility requirements for accredited users
- 706 iii. Identity Validation, Procedures
- 707 iv. Identity Credential Management Policies: lifetime/expiration, renewal
- 708 frequency, security properties (password or key policies/strength), etc.
- 709 v. Identity Credential Revocation Procedures: circumstances for
- 710 revocation, revocation mechanism(s), etc. (see also “Accredited User
- 711 Revocation & abuse section below]
- 712 vi. Signed Assertions Management: lifetime/expiration, renewal frequency,
- 713 etc.
- 714 vii. NOTE: requirements beyond the baseline listed above may be necessary
- 715 for certain classes of Requestors.
- 716 1.4.7. Define dispute resolution and complaints process: The Accreditation
- 717 Authority MUST define a dispute resolution and complaints process to
- 718 challenge actions taken by the Accreditation Authority. The defined
- 719 process MUST include due process checks and balances.
- 720 1.4.8. Audits: The Accreditation Authority MUST be audited by an auditor on a
- 721 regular basis. Should the Accreditation Authority be found in breach of
- 722 the accreditation policy and requirements, it will be given an
- 723 opportunity to cure the breach, but in cases of repeated failure, a new
- 724 Accreditation Authority must be identified or created. Additionally,
- 725 accredited entities MUST be audited for compliance with the
- 726 accreditation policy and requirements on a regular basis; (Note: detailed
- 727 information regarding auditing requirements for both the Accreditation

Deleted: specific

Deleted: ,

Deleted:

Deleted: [

Deleted:

- 733 Authority and any Identity Providers it may use can be found in the  
 734 Auditing recommendation #16).  
 735 1.4.9. User Groups: The Accreditation Authority MAY develop user groups /  
 736 categories to facilitate the accreditation process as all Requestors will  
 737 need to be accredited, and accreditation will include identity  
 738 verification.  
 739 1.4.10. Reporting: The Accreditation Authority MUST report publicly and on a  
 740 regular basis on the number of accreditation requests received,  
 741 accreditation requests approved/renewed, accreditations denied,  
 742 accreditations revoked, complaints received and information about the  
 743 identity providers it is working with. See also recommendation #17 on  
 744 reporting.  
 745 1.4.11. Renewal: The Accreditation Authority MUST establish a timeline and  
 746 requirements for the renewal of the accreditation.  
 747 1.4.12. Confirmation of user data: The Accreditation Authority MUST send  
 748 periodic reminders (e.g., yearly) to accredited users to confirm user data  
 749 and remind accredited users to keep the information required for  
 750 accreditation up to date. Changes to this required information MAY  
 751 result in the need to re-accredit.  
 752  
 753 **1.5 Accredited User Revocation**  
 754  
 755 1.5.1. Revocation, within the context of the SSAD, means the Accreditation  
 756 Authority can revoke the accredited user’s status as an accredited user  
 757 of the SSAD.<sup>12</sup> A non-exhaustive list of examples where revocation may  
 758 apply include 1) the accredited user’s violation of any applicable  
 759 safeguards or terms of service, 2) a change in affiliation of the accredited  
 760 user, 3) violation of data retention / destruction requirements or 4)  
 761 where prerequisites for accreditation no longer exist.  
 762 1.5.2. The Accreditation Authority MUST make available an appeals  
 763 mechanism to allow an accredited user to challenge the decision to  
 764 revoke the accredited user’s status within a defined time frame to be  
 765 decided by the Accreditation Authority. However, for the duration of the  
 766 appeal, the accredited user’s status will remain suspended. Outcomes of  
 767 an appeal MUST be reported in a transparent manner.  
 768 1.5.3. A mechanism to report an accredited user’s violation of any safeguards  
 769 or terms of service MUST be provided by SSAD.<sup>13</sup> Reports MUST be  
 770 relayed to the Accreditation Authority for handling. The Accreditation  
 771 Authority MAY also obtain information from other parties in making a  
 772 determination that abuse has taken place.

<sup>12</sup> For clarity, a legal entity would not be automatically de-accredited for the single action of an individual user whose accreditation is linked to the accreditation of the legal entity, but the entity may be held responsible for the actions of the individual user whose accreditation is linked to that of the legal entity.

<sup>13</sup> Note, abuse of SSAD by an accredited user is addressed in recommendation #13.

Deleted: , amongst others

- 774 1.5.4. The revocation policy for individuals/entities SHOULD include graduated
- 775 penalties; the penalties will be further detailed during implementation,
- 776 factoring in how graduated penalties are applied in other ICANN areas.
- 777 In other words, not every violation of the system will result in
- 778 Revocation; however, Revocation MAY occur if the Accreditation
- 779 Authority determines that the accredited individual or entity has
- 780 materially breached the conditions of its accreditation and failed to cure
- 781 based on: i) a third-party verified complaint received; ii) results of an
- 782 audit or investigation by the Accreditation Authority or auditor; iii) any
- 783 misuse or abuse of privileges afforded; iv) repeated violations of the
- 784 accreditation policy; v) results of audit or investigation by a DPA.
- 785 1.5.5. In the event there is a pattern or practice of abusive behavior within an
- 786 individual/entity, the credential for the individual/entity MAY be
- 787 suspended or revoked as part of a graduated sanction.
- 788 1.5.6. Revocation MUST prevent re-accreditation in the future absent special
- 789 circumstances presented to the satisfaction of the Accreditation
- 790 Authority.
- 791 1.5.7. For the avoidance of doubt, De-accreditation does not prevent
- 792 individuals or entities from submitting future requests under the access
- 793 method provisioned in Recommendation 18 (Reasonable Requests for
- 794 Lawful Disclosure) of the EPDP Phase 1 Report.

796 1.6 De-authorization of Identity Providers

- 798 1.6.1. De-authorization of Identity Providers: The Identity Providers Validation
- 799 Procedures SHOULD include graduated penalties. In other words, not
- 800 every violation of the policy will result in De-authorization; however, De-
- 801 authorization may occur if it has been determined that the Identity
- 802 Provider has materially breached the conditions of its contract and failed
- 803 to cure based on: i) a third-party complaint received; ii) results of an
- 804 audit or investigation by the Accreditation Auditor or auditor; iii) any
- 805 misuse or abuse of privileges afforded; d) repeated violations of the
- 806 accreditation policy. Depending upon the nature and circumstances
- 807 leading to the de-authorization of an Identity Provider, some or all of its
- 808 outstanding credentials may be revoked or transitioned to a different
- 809 Identity Provider.
- 810 1.6.2. The Accreditation Authority MUST make available an appeals
- 811 mechanism to allow an Identity Provider to challenge the decision to de-
- 812 authorize the Identity Provider. However, for the duration of the appeal,
- 813 the Identity Provider's status will remain suspended. Outcomes of an
- 814 appeal MUST be reported in a transparent manner.

816 1.7 Additional considerations for accredited entities or individuals:

- 824 **1.7.1.** MUST agree to:
- 825 **1.7.1.1.** only use the data for the legitimate and lawful purpose stated;
- 826 1.7.1.2. the terms of service, in which the lawful uses of data are described;
- 827 1.7.1.3. prevent abuse of data received;
- 828 1.7.1.4. cooperate with any audit or information requests as a component of
- 829 an audit;
- 830 1.7.1.5. be subject to de-accreditation if they are found to abuse use of data
- 831 or accreditation policy / requirements;
- 832 1.7.1.6. store, protect and dispose of the gTLD registration data in
- 833 accordance with applicable law;
- 834 1.7.2. only retain the gTLD registration data for as long as necessary to achieve
- 835 the purpose stated in the disclosure request.
- 836 1.7.3. The number of SSAD requests that can be submitted during a specific
- 837 period of time MUST NOT be restricted, except where the accredited
- 838 entity poses a demonstrable threat to the SSAD, or where they may be
- 839 otherwise restricted under these recommendations (such as under
- 840 recommendation 1.5(d) and 13(b)). It is understood that possible
- 841 limitations in SSAD's response capacity and speed may apply.
- 842 1.7.4. MUST keep the information required for accreditation and verification
- 843 up to date and inform the Accreditation Authority promptly when there
- 844 are changes to this information. Any changes MAY result in re-
- 845 accreditation or re-verification of certain pieces of information provided.

**Implementation Guidance**

847 **1.8** In relation to accreditation, the EPDP Team provides the following

848 implementation guidance, with the understanding that further details will be

849 developed in the implementation phase:

- 853 1.8.1. Recognized, applicable, and well-established organizations could
- 854 support the Accreditation Authority as an Identity Provider. Proper
- 855 vetting, as described in 1.3(f) above, MUST take place if any such
- 856 reputable and well-established organizations are to collaborate with the
- 857 Accreditation Authority.
- 858 1.8.2. Examples of additional information the Accreditation Authority or
- 859 Identity Provider MAY require an applicant for accreditation to provide
- 860 could include:
- 861 • a business registration number and the name of the authority that
- 862 issued this number (if the entity applying for accreditation is a legal
- 863 person);
- 864 • information asserting trademark ownership.<sup>14</sup>

**1.9. Auditing / logging by Accreditation Authority and Identity Providers**

- 1.9.1. The accreditation/verification activity (such as accreditation request, information on the basis of which the decision to accredit or verify identity was made) will be logged by the Accreditation Authority and Identity Providers.
- 1.9.2. Logged data SHALL only be disclosed, or otherwise made available for review, by the Accreditation Authority or Identity Provider, where disclosure is considered necessary to a) fulfill or meet an applicable legal obligation of the Accreditation Authority or Identity Provider; b) carry out an audit under this policy or; c) to support the reasonable functioning of SSAD and the accreditation policy.

See also auditing and logging recommendations for further details.

**1.10 Verification.** ICANN org should use its experience in other areas where verification is involved, such as registrar accreditation, to put forward a proposal for verification of the identity of the Requestor during the implementation phase.

**1.11 Re-Accreditation Periods.** As a best practice, the re-accreditation period and requirements for Registrars may be considered, which is currently 5 years. For the avoidance of doubt, nothing prohibits the Accreditation Authority from requiring additional documentation upon accreditation renewal.

**1.12** The accredited entity is expected to develop appropriate policies and procedures to ensure appropriate use by an individual of its credentials. Each user must be accredited, but a user acting on behalf of an organization, must have their accreditation tied to its organization's accreditation.

**Recommendation #2. Accreditation of governmental entities**

**2.1 Objective of accreditation**

SSAD MUST provide reasonable access to registration data for entities that require access to this data for the exercise of their public policy tasks. In view of their obligations under applicable data protection rules, the final responsibility for granting access to non-public registration data will remain with the party that is considered to

must be provided with such data, and it must be clear that such a breach may be considered in the future disclosures for trade mark owner on whose behalf the agent is acting. The use of different 3rd party agents cannot be used as a means to avoid past sanctions for misuse of the SSAD.

910 be a controller for the processing of that registration data that constitutes personal  
911 data.

912  
913 The development and implementation of an accreditation procedure that specifically  
914 applies to governmental entities will facilitate decisions that Contracted Parties will  
915 need to make before granting access to [non-public](#) registration data to a particular  
916 entity or automated processing of disclosure decisions by the Central Gateway  
917 Manager, if applicable. This accreditation procedure can provide data controllers with  
918 information necessary to allow them to assess and decide about the disclosure of data.

## 919 920 **2.2 Eligibility**

921  
922 Accreditation by a country's/territory's government body or its authorized body<sup>15</sup>  
923 would be available to various eligible government entities<sup>16</sup> that require access to non-  
924 public registration data for the exercise of their public policy task, including, but not  
925 limited to:

- 926 • Civil and criminal law enforcement authorities
- 927 • Data protection and regulatory authorities
- 928 • Judicial authorities
- 929 • Consumer rights organizations granted a public policy task by law or delegation  
930 from a governmental entity
- 931 • Cybersecurity authorities granted a public policy task by law or delegation from  
932 a governmental entity including national Computer Emergency Response Teams  
933 (CERTs)

## 934 935 **2.3 Determining eligibility**

936  
937 Eligible government entities are those that require access to [non-public](#) registration  
938 data for the exercise of their public policy task, in compliance with applicable data  
939 protection laws. Whether an entity should be eligible is determined by a  
940 country/territory- designated Accreditation Authority. This eligibility determination  
941 does not affect the final responsibility of the Contracted Party to determine whether or  
942 not to disclose personal data following a request for [non-public](#) registration data or by  
943 the Central Gateway Manager in the case of requests that meet the criteria for  
944 automated processing of disclosure decisions, if applicable.

## 945 946 **2.4 Governmental Accreditation Authority requirements**

947  
948 Governmental Accreditation requirements MUST follow the requirements set out in  
949 Rec. 1.3.

---

<sup>15</sup> Implementation consideration: such a body could be an International Governmental Organization.

<sup>16</sup> Intergovernmental organizations (IGOs) are also eligible for accreditation under recommendation #2. An IGO that wants to be accredited MUST seek accreditation via its host country's Accreditation Authority.

950  
951 Additionally, the requirements MUST be listed and made available to eligible  
952 government entities. Failure to abide by these requirements may result in de-  
953 accreditation of the Accreditation Authority by ICANN Org.  
954

955 **2.5 Accreditation procedure**

956  
957 Accreditation MUST be provided by an approved accreditation authority. This authority  
958 may be either a country's/territory's governmental agency (e.g. a Ministry) or  
959 delegated to an intergovernmental organization. This authority SHOULD publish the  
960 requirements for accreditation and carry out the accreditation procedure for eligible  
961 government entities.  
962

- 963 2.5.1. Accreditation emphasizes the responsibilities of the data Requestor  
964 (recipient), who is responsible for complying with law.
- 965 2.5.2. Accreditation will focus on the requirements of the law, such as  
966 requirements regarding data retention length, secure storage,  
967 organizational data controls, and breach notifications.
- 968 2.5.3. Renewal, Logging, Auditing, Complaint and De-accreditation will be  
969 handled as per Rec. 1.

Deleted: the

970  
971 **Implementation Guidance:**

Deleted: ¶

972  
973 **2.6** Accreditation is required for a governmental entity to participate in the SSAD.  
974 Unaccredited governmental entities can make data requests outside the SSAD, and  
975 Contracted Parties should have procedures in place to provide reasonable access.

Deleted: ¶

976 **2.7** Accredited users will be required to follow the safeguards as set by the policy (see  
977 also recommendation #11, SSAD Terms and Conditions). This is without prejudice  
978 for the entity to respect safeguards under its domestic law.

Deleted: [x]

Deleted: ¶

979 **2.8** Accredited entities SHOULD provide details to aid the disclosure decision to  
980 Contracted Parties such as any applicable local law relating to the request.  
981

982 **Recommendation #3. Criteria and Content of Requests**

983  
984 **3.1** The objective of this recommendation is to allow for the standardized  
985 submission of requested data elements, including any supporting  
986 documentation.  
987

988 **3.2** The EPDP Team recommends that each SSAD request MUST include all  
989 information necessary for a disclosure decision, including the following  
990 information:  
991

- 992 3.2.1. Domain name pertaining to the request for access/disclosure;

- 998 3.2.2. Identification of and information about the Requestor including
- 999 Identity and Signed Assertion information as defined in
- 1000 Recommendation #1 Section 1.4a) and Section 1.4b);<sup>17</sup>
- 1001 3.2.3. Information about the legal rights of the Requestor specific to the
- 1002 request and legitimate interest or other lawful basis and/or
- 1003 justification for the request, (e.g., What is the legitimate interest or
- 1004 other lawful basis; Why is it necessary for the Requestor to ask for
- 1005 this data?);
- 1006 3.2.4. Affirmation that the request is being made in good faith and that
- 1007 data received (if any) will be processed lawfully and only in
- 1008 accordance with the purpose specified in (c);
- 1009 3.2.5. A list of data elements requested by the Requestor, and why the
- 1010 data elements requested are necessary for the purpose of the
- 1011 request;
- 1012 3.2.6. Request type (e.g. Urgent – see also recommendation #6 Priority
- 1013 Levels, Confidential – see also recommendation #12 – Disclosure
- 1014 Requirements).

Deleted: (

Deleted: , Requestor’s accreditation status, if applicable, the nature/type of business entity or individual, Power of Attorney statements, where applicable and relevant, jurisdiction of Requestor)

1015

1016 3.3 The Central Gateway Manager<sup>18</sup> MUST confirm that all required information is

1017 provided. Should the Central Gateway Manager detect that the request is

1018 incomplete, the Central Gateway Manager MUST notify the Requestor that the

1019 request is incomplete, detailing which required data is missing, and provide an

1020 opportunity for the Requestor to complete its request. It must not be possible

1021 for a Requestor to submit a request that is incomplete.

**Implementation Guidance**

The EPDP Team expects that:

1022

1023

1024

1025

1026

1027 3.4 Each request must include data associated with the information detailed in

1028 Section 3.2 above. While the mechanism to collect and place this data into a

1029 request (be it a web form, an API or similar) is not specified by this policy, the

1030 offering of pre-populated fields, tick boxes and/or dropdown options should be

1031 considered. However, the use of pre-populated fields, tick boxes or

1032 dropdown options must not exclude the ability of Requestors from submitting

1033 free form responses.

Deleted: needs to respond to the same questions, using the same form. ...

Deleted: user interface for submitting requests is considered an implementation detail,

Deleted: ¶

1034

1035 3.5 Requests must be in English unless the Contracted Party that is receiving the

1036 request indicates they are also willing to receive the request and/or supporting

1037 documents in other language(s).

1038

Deleted: ¶

<sup>17</sup> Consideration will need to be given by all parties involved in SSAD to the requirements that may apply to cross-border data transfers.

<sup>18</sup> See definition in section 3.5.1 – Definitions.

Deleted: .

1050 3.6 \_\_\_ A signed assertion may provide one or more of the requirements as listed  
1051 \_\_\_ above.

1052 **Recommendation #4. Acknowledgement of receipt and relay of the disclosure**  
1054 **request**

1055 **4.1 Acknowledgement of receipt**

Deleted: 4.1

1056 **4.1.1.** Following confirmation that the request is syntactically correct and  
1057 that all required fields have been filled out, the Central Gateway Manager  
1058 **MUST** immediately and synchronously respond with the acknowledgement  
1059 of receipt and relay the disclosure request<sup>19</sup> to the responsible Contracted  
1060 Party.  
1061

1062 **4.1.2.** The response provided by the Central Gateway Manager **to the**  
1063 **Requestor** **SHOULD** also include information about the subsequent steps,  
1064 information on how public registration data can be obtained as well as the  
1065 expected timeline consistent with the SLAs outlined in recommendation  
1066 #10.  
1067

1068 **4.2 Relay of disclosure request**

Deleted: ¶

1069 **4.2.1.** By default, the Central Gateway Manager **MUST** relay the disclosure  
1070 request to the Registrar of Record. However, where the Central \_\_\_  
1071 Gateway Manager is aware of any circumstance, assessed in line with  
1072 these recommendations, that necessitates the provision of a disclosure  
1073 request to the relevant Registry Operator, the Central Gateway Manager  
1074 **MAY** relay the disclosure request to the relevant Registry Operator,  
1075 provided that the reasons necessitating such a transfer of a request, are  
1076 provided to the registry operator for their consideration. **The Requestor**  
1077 **MUST be able** to flag such circumstance to the Central Gateway \_\_\_  
1078 Manager, but the Central Gateway Manager **MUST** make its own \_  
1079 assessment of whether the identified circumstance necessitates the  
1080 provision of the disclosure request to the relevant Registry Operator. For  
1081 clarity, nothing in this recommendation prevents a Requestor **from**  
1082 directly contacting, outside of SSAD, the relevant Registry Operator  
1083 with a disclosure request.

1086 **Implementation guidance**

1087 The EPDP Team expects that:  
1088  
1089  
1090

**Moved [3]:** <sup>19</sup> Implementation guidance: the Central Gateway Manager is expected to relay the disclosure request as well as all relevant information about the Requestor to the Contracted Party. In the case of disclosure requests for which automated processing of the disclosure decision applies (see recommendation Automation), the relay of the disclosure request and all relevant information may happen at the same time as the Central Gateway Manager would direct the Contracted Party to automatically disclose the requested data to the Requestor.

1100 **4.3** The acknowledgement of receipt will include a “ticket number” or similar  
 1101 mechanism to facilitate interactions between the Requestor and the SSAD,  
 1102 details to be worked out in implementation.

1103 **4.4** The Central Gateway Manager relays the disclosure request as well as necessary  
 1104 and appropriate information about the Requestor to the Contracted Party. If it  
 1105 concerns a disclosure requests for which automated processing of the  
 1106 disclosure decision applies (see recommendation Automation), the relay of the  
 1107 disclosure request and all relevant information may happen at the same time as  
 1108 the Central Gateway Manager would direct the Contracted Party to  
 1109 automatically disclose the requested data to the Requestor.

1110 **4.5** The Central Gateway Manager is expected to relay the disclosure request as  
 1111 well as all relevant information about the Requestor to the Contracted Party. In  
 1112 the case of disclosure requests for which automated processing of the  
 1113 disclosure decision applies (see recommendation Automation), the relay of the  
 1114 disclosure request and all relevant information may happen at the same time as  
 1115 the Central Gateway Manager would direct the Contracted Party to  
 1116 automatically disclose the requested data to the Requestor.

Moved (insertion) [3]  
 Deleted: <sup>1</sup> Implementation guidance:

**Recommendation #5. Response Requirements**

1120 **5.1** For the Central Gateway Manager:<sup>20</sup>

1121 **5.1.1** As part of its relay to the responsible Contracted Party, the Central  
 1122 Gateway Manager MAY provide a recommendation to the Contracted Party  
 1123 whether to disclose or not.

1124

1125 **5.2** For Contracted Parties:

1126 **5.2.1.** The Contracted Party MAY follow the recommendation of the Central  
 1127 Gateway Manager but is not obligated to do so. If the Contracted Party  
 1128 decides not to follow the recommendation of the Central Gateway  
 1129 Manager, the Contracted Party MUST communicate its reasons for not  
 1130 following the Central Gateway Manager’s recommendation so the Central  
 1131 Gateway Manager can learn and improve on future response  
 1132 recommendations.

1133 **5.2.2.** MUST provide a disclosure response without undue delay, unless there are  
 1134 exceptional circumstances. Such exceptional circumstances MAY include the  
 1135 overall number of requests received if the number far exceeds the  
 1136 established SLAs.<sup>21</sup> SSAD requests that meet the automatic response criteria  
 1137 must receive an automatic disclosure response. For requests that do not  
 1138 meet the automatic response criteria, a response MUST be received in line  
 1139 with the SLAs described in the SLA recommendation.

<sup>20</sup> Note that the requirements for disclosure requests that meet the criteria for automated disclosure decisions are covered in recommendation #9.  
<sup>21</sup> See recommendation #12 for further details on what is considered abusive use of SSAD.

1145 5.2.3. Responses where disclosure of data (in whole or in part) has been denied  
 1146 MUST include a rationale sufficient for the Requestor to objectively  
 1147 understand the reasons for the decision, including, for example, an analysis  
 1148 and explanation of how the balancing test was applied<sup>22</sup> (if applicable).  
 1149 Additionally, in its response, the Contracted Party MAY include information  
 1150 on how public registration data can be obtained.

1151 5.2.4. If the Contracted Party determines that disclosure would be in violation of  
 1152 applicable laws or result in inconsistency with these policy  
 1153 recommendations, the Contracted Party MUST document the rationale and  
 1154 communicate this information to the Requestor, and, if requested, ICANN  
 1155 Org.

1157 5.3 If a Requestor is of the view that its request was denied in violation of the  
 1158 procedural requirements of this policy, a complaint MAY be filed with ICANN  
 1159 Org. ICANN Org MUST investigate complaints regarding disclosure requests  
 1160 under its enforcement processes.

1162 5.4 ICANN org MUST make available an alert mechanism by which Requestors as  
 1163 well as data subjects whose data has been disclosed can alert ICANN org if they  
 1164 are of the view that disclosure or non-disclosure is the result of systemic abuse  
 1165 by a Contracted Party. This alert mechanism is not an appeal mechanism – to  
 1166 contest disclosure or non-disclosure affected parties are expected to use  
 1167 available dispute resolution mechanisms such as courts or Data Protection  
 1168 Authorities – but it should help inform ICANN Compliance of allegations of  
 1169 systemic failure to follow the requirements in this policy, which should trigger  
 1170 appropriate enforcement action.

1171 **Implementation Guidance**

1172 **5.5.** Information resulting from the alert mechanism is also expected to be included  
 1173 in the SSAD Implementation Status Report (see recommendation #18) to allow  
 1174 for further consideration of potential remedies to address abusive behavior.  
 1175  
 1176

1177 **5.6** It is not the EPDP Team’s expectation that the Central Gateway Manager will  
 1178 provide a recommendation from day one as it is understood that experience  
 1179 will need to be gained before the Central Gateway Manager may be in a  
 1180 position to provide such a recommendation to the Contracted Party. It is the  
 1181 expectation that a recommendation would be developed in an automated  
 1182 fashion by factoring in information contained in the request, information about  
 1183 the Requestor, and the history of requests by the Requestor.

<sup>22</sup> As per recommendation #6, care must be taken to ensure that no personal data is revealed to the Requestor within this explanation.

1198 **Recommendation #6. Priority Levels**

- 1199
- 1200 6.1 The EPDP Team recommends that the Central Gateway Manager accommodate
- 1201 at least the following three (3) priority levels, which a Requestor can choose
- 1202 from when submitting requests through the SSAD. The priority level defines the
- 1203 urgency with which the disclosure request should be actioned by the
- 1204 Contracted Party:
- 1205
- 1206 6.1.1. **Priority 1** - Urgent Requests - The criteria to determine urgent
- 1207 requests is limited to circumstances that pose an imminent threat to
- 1208 life, serious bodily injury, critical infrastructure (online and offline) or
- 1209 child exploitation. For the avoidance of doubt, Priority 1 is not
- 1210 limited to requests from law enforcement agencies.
- 1211 6.1.2. **Priority 2** - ICANN Administrative Proceedings – disclosure requests
- 1212 that are the result of administrative proceedings under ICANN’s
- 1213 contractual requirements or existing Consensus Policies, such as
- 1214 UDRP and URS verification requests.<sup>24</sup>
- 1215 6.1.3. **Priority 3** - All other requests.
- 1216
- 1217 6.2 For Priority 3 requests, Requestors MUST have the ability to indicate that the
- 1218 disclosure request concerns a consumer protection issue (phishing, malware or
- 1219 fraud), in which case the Contracted Party **SHOULD** prioritize the request over
- 1220 other Priority 3 requests. Persistent abuse of this indication can result in the
- 1221 Requestor’s de-accreditation.
- 1222
- 1223 6.3 The Contracted Party:
- 1224 • MAY reassign the priority level during the review of the request. For
- 1225 example, as a request is manually reviewed, the Contracted Party MAY note
- 1226 that although the priority is set as priority 2 (ICANN Administrative
- 1227 Proceeding), the request shows no evidence documenting an ICANN
- 1228 Administrative Proceeding such as a filed UDRP case, and accordingly, the
- 1229 request should be recategorized as Priority 3.
- 1230 • MUST communicate any recategorization to the Central Gateway Manager
- 1231 and Requestor.
- 1232
- 1233 6.4 The EPDP Team recommends that the SSAD MUST support ‘urgent’ SSAD
- 1234 disclosure requests to which the following requirements apply:
- 1235
- 1236 6.4.1. Abuse of urgent requests: Violations of the use of Urgent SSAD
- 1237 Requests will result in a response from the Central Gateway
- 1238 Manager to ensure that the requirements for Urgent SSAD Requests

Deleted: MAY

<sup>24</sup> For clarity, this priority assignment is expected to be limited to ICANN-approved dispute resolution service providers or its employees in the context of ICANN Administrative Proceedings.

1240 are known and met in the first instance, but repeated violations may  
1241 result in the Central Gateway Manager suspending the ability to  
1242 make urgent requests via the SSAD.

1243 6.4.2. Contracted Parties MUST maintain a dedicated contact for dealing  
1244 with Urgent SSAD Requests which can be stored and used by the  
1245 Central Gateway Manager, in circumstances where an SSAD request  
1246 has been flagged as Urgent.

1247  
1248 6.5 The EPDP Team recommends that Contracted Parties MUST publish their  
1249 standard business hours, business days, and accompanying time zone in the  
1250 SSAD portal.

- Deleted: →

1251 **Implementation Guidance**

1252  
1253  
1254 6.6 See, for reference, the [Framework for Registry Operator to Respond to Security](#)  
1255 [Threats](#) which notes: *"Initial judgment of a request being "High Priority" should*  
1256 *be self-evident and require no unique skills in order to determine a public safety*  
1257 *nexus. "High Priority" should be considered an imminent threat to human life,*  
1258 *critical infrastructure or child exploitation".*

Deleted: ¶

1259  
1260 6.7 Critical infrastructure means the physical and cyber systems that are vital that  
1261 their incapacity or destruction would have a major detrimental impact on the  
1262 physical or economic security or public health or safety.

Deleted: ¶

1263  
1264 6.8 See also recommendation #10 which contains further details in relation to the  
1265 requirements for an Urgent SSAD request.

1266 **How is priority defined?**

1267 Priority is a code assigned to requests for disclosure that assumes processing will  
1268 happen based upon agreed to, best effort target response times.

Deleted: contain

1269 **Who sets the priority?**

1270  
1271 The initial priority of a disclosure request is set by the Requestor, using the priority  
1272 options defined by this policy. When selecting a priority, the Central Gateway Manager  
1273 will clearly state the criteria applicable for an Urgent Request and the potential  
1274 consequences of abusing this priority setting.

Deleted: provided by the Central Gateway Manager

Deleted: , based on the criteria outlined below

1275 **What happens if priority needs to be shifted?**

1276  
1277 It is possible that the initially-set priority may need to be reassigned during the review  
1278 of the request. For example, as a request is manually reviewed, the Contracted Party  
1279 MAY note that although the priority is set as 2 (UDRP/URS), the request shows no  
1280 evidence documenting a filed UDRP case, and accordingly, the request should be  
1281 recategorized as Priority 3. Any recategorization MUST be communicated to the Central  
1282 Gateway Manager and Requestor. Following receipt of a non-automated disclosure  
1283

1294 request from the Central Gateway Manager, the Contracted Party is responsible for  
1295 determining whether to disclose the nonpublic data. Within the above-defined  
1296 response times, the Contracted Party MUST respond to the request.

1297  
1298 **Recommendation #7. Requestor Purposes**  
1299

1300 7.1 The EPDP Team recommends that:

1301  
1302 7.1.1. Requestors **MUST** submit data disclosure requests for specific purposes  
1303 such as but not limited to: (i) criminal law enforcement, national or  
1304 public security, (ii) non law enforcement investigations and civil claims,  
1305 including, intellectual property infringement and UDRP and URS claims,  
1306 (iii) consumer protection, abuse prevention, obligations applicable to  
1307 digital service providers (DSP)<sup>25</sup> and network security. Requestors MAY  
1308 also submit data verification requests on the basis of Registered Name  
1309 Holder (RNH) consent that has been obtained by the Requestor (and is  
1310 at the sole responsibility of that Requestor), for example to validate the  
1311 RNH's claim of ownership of a domain name registration, or contract  
1312 with the Requestor.

1313 7.1.2. Assertion of one of these specific purposes does not guarantee access in  
1314 all cases, but will depend on evaluation of the merits of the specific  
1315 request, compliance with all applicable policy requirements, and the  
1316 legal basis for the request.

1317  
1318 **Recommendation #8. Contracted Party Authorization.**  
1319

1320 *For clarity, this recommendation pertains to disclosure requests that are routed to the*  
1321 *Contracted Party for review. These requirements DO NOT apply to disclosure requests*  
1322 *that meet the criteria for automated processing of disclosure decisions as described in*  
1323 *recommendation #9, regardless of whether automated processing of disclosure*  
1324 *decisions is mandated or at the request of the Contracted Party. This recommendation*  
1325 *does not override the ability for Contracted Parties to differentiate between registrants*  
1326 *based on geographic basis as outlined in recommendation #16 (from EPDP Phase 1) nor*  
1327 *does it override the ability for Contracted Parties to differentiate between legal and*  
1328 *natural persons as per recommendation #17 (from EPDP Phase 1) for this specific*  
1329 *recommendation.*

1330  
1331 **General requirements**  
1332

1333 The Contracted Party  
1334

Deleted: MAY

Deleted: 16

<sup>25</sup> For the purposes of this Recommendation, the obligations of DSPs are specified under EU NIS Directive of 2018  
<<https://ico.org.uk/for-organisations/the-guide-to-nis/key-concepts-and-definitions/>.

- 1337 8.1. MUST review every request individually and not in bulk, regardless of whether
- 1338 the review is done automatically or through meaningful review and MUST NOT
- 1339 disclose data on the basis of accredited user category alone.
- 1340
- 1341 8.2. MAY outsource the authorization responsibility to a third-party provider, but
- 1342 the Contracted Party will remain ultimately responsible for ensuring that the
- 1343 applicable requirements are met.
- 1344
- 1345 8.3. MUST determine its own lawful basis for the processing related to the
- 1346 disclosure decision.<sup>26</sup> The Requestor will have the ability to identify the lawful
- 1347 basis under which it expects the Contracted Party to disclose the data
- 1348 requested; however, in all instances where the Contracted Party is responsible
- 1349 for making the decision to disclose, the Contracted Party MUST make the final
- 1350 determination of the appropriate lawful basis.
- 1351
- 1352 8.4. MUST support reexamination requests received via the SSAD system and MUST
- 1353 consider them based on the rationale provided by the Requestor. For clarity,
- 1354 the resubmission of a disclosure request that is identical to the original request,
- 1355 without a supporting rationale as to why the request must be reconsidered,
- 1356 does not need to be reconsidered by the Contracted Party.
- 1357
- 1358 8.5. Absent any legal requirements to the contrary, disclosure MUST NOT be refused
- 1359 solely for lack of any of the following: (i) a court order; (ii) a subpoena; (iii) a
- 1360 pending civil action; or (iv) a UDRP or URS proceeding; nor can refusal to
- 1361 disclose be solely based on the fact that the request is founded on alleged
- 1362 intellectual property infringement.
- 1363

**Authorization determination requirements**

Following receipt of a request from the Central Gateway Manager, the Contracted Party:

- 1369 8.6. MUST conduct a prima facie<sup>27</sup> review of the request’s validity, i.e., is the request
- 1370 sufficient for the Contracted Party to ground a substantive review and process
- 1371 the associated underlying data. If the Contracted Party determines that the
- 1372 request is not valid, e.g. it does not provide sufficient ground for a substantive
- 1373 review of the underlying data, the Contracted Party MUST request the
- 1374 Requestor to provide further information prior to denying the request;
- 1375
- 1376 8.7. If the request is deemed valid based on the prima facie review, MUST conduct a
- 1377 substantive review of the request and the underlying data:

Deleted: MAY

<sup>26</sup> See also implementation guidance #17.

<sup>27</sup> Per [the Cambridge Dictionary](#), at first sight (based on what seems to be the truth when first seen or heard).

- 1385 8.7.1. If, following the evaluation of the underlying data, the Contracted Party  
 1386 reasonably determines that disclosing the requested data elements  
 1387 \_\_\_\_\_ would not result in the disclosure of personal data, the Contracted  
 1388 \_\_\_\_\_ Party MUST disclose the data, unless the disclosure is prohibited under  
 1389 applicable law.<sup>28</sup> For clarity, if the disclosure would not result in the  
 1390 \_\_\_\_\_ disclosure of personal data, the Contracted Party does not have to  
 1391 \_\_\_\_\_ further evaluate the request.
- 1392 8.7.2. If following the evaluation of the underlying data, the Contracted Party  
 1393 determines that disclosing the requested data elements would result in  
 1394 the disclosure of personal data, the Contracted Party MUST determine,  
 1395 at a minimum, as part of its substantive review of the request and the  
 1396 underlying data:
- 1397
- 1398 8.7.2.1 whether the Contracted Party has a lawful basis for disclosure;<sup>29</sup>  
 1399 8.7.2.2 whether all the requested data elements are necessary;<sup>30</sup>  
 1400 8.7.2.3 whether balancing or review is required per the lawful basis  
 1401 identified by the Contracted Party as in 8.3.
- 1402
- 1403 8.8. If the request is subject to balancing or review as per paragraph 8.7.2.3;  
 1404 8.8.1 MUST disclose the data if, based on its evaluation, the Contracted Party  
 1405 determines that the Requestor’s legitimate interest is not outweighed  
 1406 by the interests or fundamental rights and freedoms of the data subject.  
 1407 The Contracted Party MUST document the rationale for its approval.
- 1408 8.8.2 MUST deny the request, if, based on its evaluation, the Contracted Party  
 1409 determines that the Requestor’s legitimate interest is outweighed by the  
 1410 interests or fundamental rights and freedoms of the data subject. The  
 1411 Contracted Party MUST document the rationale for its denial and MUST  
 1412 communicate the reason for denial to the Central Gateway Manager,  
 1413 with care taken to ensure no personal data is included in the reason for  
 1414 denial.
- 1415
- 1416 8.9. If the request is not subject to balancing or review as per paragraph 8.7.2.3;  
 1417 8.9.1 MUST disclose if the Contracted Party determines it has a lawful basis or  
 1418 is not prohibited under applicable law to disclose the data. The  
 1419 Contracted Party MUST document the rationale for its approval.
- 1420 8.9.2 MUST deny the request if the Contracted Party determines it does not  
 1421 have a lawful basis or is prohibited under applicable law to disclose the  
 1422 data. The Contracted Party MUST document the rationale for its denial

Deleted: expressly

Deleted: under applicable law

Deleted: 7.2

Deleted: .

Deleted: 7.2

Deleted: .

<sup>28</sup> When considering the publication of non-public data of legal persons, particularly with respect to NGOs and parties engaged in human rights activities that may be protected by local law (e.g. Constitutional and Charter Rights law), the Contracted Party should consider the impact on individuals that could potentially be identified by disclosing the legal person data.

<sup>29</sup> See also implementation guidance #17

<sup>30</sup> For further context regarding the definition of necessary, please refer to p. 7 of [the legal guidance](#) the EPDP Team referenced when formulating this definition.

1429 and MUST communicate the reason for denial to the Central Gateway  
 1430 Manager, with care taken to ensure no personal data is included in the  
 1431 reason for denial.

1432  
 1433 The Requestor:

1434  
 1435 8.10. MAY file a reexamination request if it believes its request was improperly  
 1436 denied.

1437  
 1438 8.11. MUST, within its reexamination request, provide a supporting rationale as to  
 1439 why its request must be reexamined. The supporting rationale should provide  
 1440 sufficient detail as to why the Requestor believes its request was improperly  
 1441 denied.

1442  
 1443 8.12. If a Requestor believes a Contracted Party is not complying with any of the  
 1444 requirements of this policy, the Requestor SHOULD notify ICANN [org](#)  
 1445 further to the alert mechanism described in Recommendation #5 – Response  
 1446 Requirements.

1447  
 1448 **Implementation Guidance**

1449  
 1450 8.13. The EPDP Team envisions the Contracted Party having the ability to  
 1451 communicate with the Requestor via a dedicated ticket in the SSAD. The EPDP  
 1452 Team also envisions the SSAD to be fully protected by industry-standard data  
 1453 protection technology including encryption to protect the transmission of  
 1454 personal data, in accordance with applicable data protection laws and cyber  
 1455 security acts.

1456  
 1457 8.14. The EPDP Team notes the specifics of how the communication in paragraph [8.6](#)  
 1458 will be assessed in the policy implementation phase; however, the EPDP Team  
 1459 provides this additional guidance to assist. The EPDP Team envisions the  
 1460 Contracted Party sending a notice to the Requestor, via the relevant SSAD  
 1461 ticket, noting its decision to deny the request. The Requestor would then have  
 1462 (x) amount of days to provide updated information to the Contracted Party.  
 1463 Upon the Requestor’s provision of updated information, the SLA response time  
 1464 would reset. For example, the Contracted Party would have 1 business day to  
 1465 respond to the updated urgent request. If the Requestor chooses not to provide  
 1466 the information, the SLA would be counted when the Contracted Party sends  
 1467 the “intent to deny” notice to the Requestor. If the Requestor decides not to  
 1468 respond, the request is denied as soon as the time period has expired.

1469  
 1470 8.15. In situations where the Contracted Party is evaluating the legitimate interest [of](#)  
 1471 the Requestor, the Contracted Party SHOULD consider the following:

Deleted: Compliance

Deleted: offering

Deleted: 6

- 1475 8.15.1 Interest must be specific, real, and present rather than vague and
- 1476 speculative.
- 1477 8.15.2 An interest is generally deemed legitimate so long as it can be pursued
- 1478 \_\_\_\_\_ consistent with data protection and other laws.
- 1479 8.15.3 Examples of legitimate interests include: (i) enforcement, exercise, or
- 1480 defense of legal claims, including IP infringement; (ii) prevention of fraud
- 1481 and misuse of services; (iii) physical, IT, and network security.
- 1482
- 1483 8.16. The Contracted Party SHOULD, as part of its substantive review, assess at least:
- 1484 8.16.1 Where applicable, the following factors should be used to determine
- 1485 whether the legitimate interest of the Requestor is not outweighed by
- 1486 the interests or fundamental rights and freedoms of the data subject. No
- 1487 single factor is determinative; instead, the Contracted Party SHOULD
- 1488 consider the totality of the circumstances outlined below:
- 1489 8.16.1.1 \_\_\_\_\_ *Assessment of impact*. Consider the direct impact on data
- 1490 \_\_\_\_\_ subjects as well as any broader possible consequences of
- 1491 \_\_\_\_\_ the data processing. Consider the public interest and
- 1492 \_\_\_\_\_ legitimate interests pursued by the Requestor to, for
- 1493 \_\_\_\_\_ example, maintain the security and stability of the DNS.
- 1494 \_\_\_\_\_ Whenever the circumstances of the disclosure request or
- 1495 \_\_\_\_\_ the nature of the data to be disclosed suggest an \_\_\_\_\_
- 1496 \_\_\_\_\_ increased risk for the data subject affected, this shall
- 1497 \_\_\_\_\_ be taken into account during the decision-making.
- 1498 8.16.1.2 \_\_\_\_\_ *Nature of the data*. Consider the level of sensitivity of the
- 1499 \_\_\_\_\_ data as well as whether the data is already publicly \_\_\_\_\_
- 1500 \_\_\_\_\_ available.
- 1501 8.16.1.3 \_\_\_\_\_ *Status of the data subject*. Consider whether the data
- 1502 \_\_\_\_\_ subject’s status increases their vulnerability (e.g., \_\_\_\_\_
- 1503 \_\_\_\_\_ children, asylum seekers, other protected classes)
- 1504 8.16.1.4 \_\_\_\_\_ *Scope of processing*. Consider information from the
- 1505 \_\_\_\_\_ disclosure request or other relevant circumstances that
- 1506 \_\_\_\_\_ indicates whether data will be securely held (lower risk)
- 1507 \_\_\_\_\_ versus publicly disclosed, made accessible to a large
- 1508 \_\_\_\_\_ number of persons, or combined with other data (higher
- 1509 \_\_\_\_\_ risk),<sup>32</sup> provided that this is not intended to prohibit
- 1510 \_\_\_\_\_ public disclosures for legal actions or administrative
- 1511 \_\_\_\_\_ dispute resolution proceedings such as the UDRP or URS.
- 1512 8.16.1.5 \_\_\_\_\_ *Reasonable expectations of the data subject*. Consider
- 1513 \_\_\_\_\_ whether the data subject would reasonably expect their
- 1514 \_\_\_\_\_ data to be processed/disclosed in this manner.

Deleted: <sup>31</sup>

Deleted:

<sup>32</sup> For further context regarding the higher risk when data is combined, please refer to p. 5 of [the legal guidance](#) the EPDP Team referenced when considering these factors.

- 1517 8.16.1.6        *Status of the controller and data subject.* Consider
- 1518        negotiating power and any imbalances in authority       .
- 1519        between the controller and the data subject.<sup>33</sup>
- 1520 8.16.1.7        *Legal frameworks involved.* Consider the jurisdictional
- 1521        legal frameworks of the Requestor, Contracted
- 1522        Party/Parties, and the data subject, and how this may
- 1523        affect potential disclosures.
- 1524 8.16.1.8        *Cross-border data transfers.* Consider the requirements
- 1525        that may apply to cross-border data transfers.

1527 8.17. A lawful basis may be based on the presence of a lawful basis under ICANN

1528 policy (or applicable law).

Deleted: either

Deleted: >

Deleted: ; or on the absence of a prohibition on the processing and disclosure of the data requested under applicable law...

1530 The application of the balancing test and factors considered in this section SHOULD be

1531 revised, as appropriate, to address applicable case law interpreting GDPR, guidelines

1532 issued by the EDPB or revisions to GDPR or other applicable privacy laws that may

1533 occur in the future.

1534 **Recommendation #9. Automation of SSAD Processing**

- 1536 9.1. The EPDP Team recommends that the Central Gateway manager MUST
- 1537 automate the receipt, authentication, and transmission of SSAD requests to the
- 1538 relevant Contracted Party insofar as it is technically and commercially feasible
- 1539 and legally permissible.
- 1540
- 1541 9.2. The SSAD MUST allow for the automation of the processing of well-formed,
- 1542 valid, complete, properly identified requests from accredited users as described
- 1543 below.
- 1544
- 1545

1546 **Automated processing of disclosure decisions**

- 1547
- 1548 9.3. Contracted Parties MUST process in an automated manner disclosure decisions
- 1549 for any categories of requests for which automation is determined (see 9.4
- 1550 and the processes detailed in recommendation #18) to be technically and
- 1551 commercially<sup>34</sup> feasible<sup>35</sup> and legally permissible. For the avoidance of doubt,

Deleted: 16

Deleted: 19

<sup>33</sup> In the context of Contracted Party authorization, the relevant parties are the Contracted Party (controller) and the registrant (data subject); however, the roles and responsibilities of the parties will be further discussed in implementation.

<sup>34</sup> During implementation, further consideration will need to be given to the commercial feasibility for registrars that may receive a very limited number of requests that will meet the criteria for automated processing of disclosure decisions and whether the financial burden of enabling this automated processing is of such a nature that an exemption may need to be provided. As part of this consideration, the Central Gateway Manager also should consider how it can facilitate the integration of a Contracted Party's system with the SSAD to reduce any potential burden of automated processing of disclosure decisions.

<sup>35</sup> Initial consideration of the financial feasibility of automation will be addressed by ICANN org with the Implementation Review Team and subsequently by the mechanism for the evolution of SSAD, as applicable.

1559 the EPDP Team recommends that any categories of disclosure decisions that do  
1560 not currently meet these criteria will not be foreclosed from consideration of  
1561 automated disclosure in the future, subject to the processes detailed in  
1562 Recommendation #18. In areas where disclosure decisions do not meet these  
1563 criteria, standardization of the disclosure decision process is the baseline  
1564 objective.

Deleted: 19

1566 9.4. Per the legal guidance obtained (see Advice on use cases re automation in  
1567 the context of disclosure of non-public registrant data - April 2020), the EPDP  
1568 Team recommends that the following types of disclosure requests, for which  
1569 legal permissibility has been indicated, under GDPR for full automation (in-take  
1570 as well as processing of disclosure decision) MUST be automated from the  
1571 time of the launch of the SSAD:

Deleted: here

Deleted: >

1576 legislation allegedly committed by ICANN/Contracted Parties  
1577 affecting the registrant;

Deleted: I

Deleted: infringement

1578 9.4.3 Request for city field only, to evaluate whether to pursue a claim or  
1579 for statistical purposes;

Deleted: a

Deleted: by a data protection authority

1580 9.4.4 No personal data on registration record that has been previously  
1581 disclosed by the Contracted Party.

1583 9.5. For clarity, if a Contracted Party determines that automated processing of  
1584 disclosure decisions for the use cases specified in this recommendation or  
1585 through the processes detailed in Recommendation #18 is not legally  
1586 permissible or brings with it a significant risk that was not recognized in the  
1587 legal guidance obtained by the EPDP Team but has been subsequently identified  
1588 and documented through, for example, a Data Protection Impact Assessment  
1589 (DPIA), the Contracted Party MUST notify ICANN org it requires an exemption,  
1590 from automated processing of disclosure decisions for the identified use case(s)  
1591 and MUST include supporting documentation with its notice. Unreasonable  
1592 exemption notifications MAY be subject to review by ICANN Org. ICANN org  
1593 MUST reverse the exemption recognition if it finds the Contracted Party  
1594 notification incorrect or abusive.

Deleted: including supporting documentation

1596 9.6. As soon as ICANN org has been notified, the Central Gateway Manager MUST  
1597 halt the transmission of the identified use cases as requiring automated  
1598 processing and MUST transmit the request pursuant to the requirements in  
1599 Recommendation 8 – Contracted Party Authorization.

1601 9.7. ICANN org MUST provide a notice and comment process to allow affected  
1602 stakeholders to provide input on the exemptions provided for in paragraph 9.5.

1614 ICANN org MAY facilitate a subsequent discussion between affected  
 1615 stakeholders and the Contracted Party in question to facilitate mutual  
 1616 understanding of the exemption and supporting information. Further details  
 1617 will be determined in implementation, including potential confidentiality of the  
 1618 process.  
 1619  
 1620 9.8. As soon as the Contracted Party becomes aware that the exemption is no longer  
 1621 applicable, it MUST inform ICANN org accordingly.  
 1622  
 1623 9.9. Following a Contracted Party’s notification under paragraph 9.8, the Central  
 1624 Gateway Manager MUST transmit requests that meet the criteria for  
 1625 automated processing to the Contracted Party in accordance with this  
 1626 recommendation and the Contracted Party MUST resume automated  
 1627 processing of disclosure decisions for the relevant use cases.  
 1628  
 1629 9.10. With respect to disclosure requests that would be sent to a Contracted Party for  
 1630 review, a Contracted Party MAY request the Central Gateway to automate the  
 1631 processing of the disclosure decision of all, or certain types of, disclosure  
 1632 requests and/or requests coming from a certain Requestor,<sup>36</sup> after the  
 1633 Contracted Party has weighed the risk and assessed the legal permissibility, as  
 1634 applicable.  
 1635  
 1636 9.11. A Contracted Party MAY retract or revise a request for automating the  
 1637 disclosure decision that is not required by these policy recommendations at  
 1638 any time.  
 1639  
 1640 9.12. For clarity, the Central Gateway Manager oversees whether a disclosure  
 1641 request has met the criteria for automated processing of disclosure decisions  
 1642 \_\_\_\_\_ which MAY involve non-automated review at the Central Gateway. Similarly,  
 1643 \_\_\_\_\_ the Central Gateway MAY request the Contracted Party for further information  
 1644 \_\_\_\_\_ that may help the Central Gateway Manager in determining whether or not the  
 1645 \_\_\_\_\_ criteria for an automated processing of disclosure decisions have been met. A  
 1646 \_\_\_\_\_ Contracted Party MAY provide such further information, if requested. There is  
 1647 \_\_\_\_\_ no expectation that personal data is transferred in response to such an  
 1648 \_\_\_\_\_ information request.

Deleted: decision

1649  
 1650 **Implementation Guidance**

1651  
 1652 In addition to the requirements detailed in Recommendation #4 (Acknowledgement of  
 1653 Receipt) and Recommendation #10 (SLAs), which will also apply to automated  
 1654 processing of disclosure decisions, the following implementation guidance will apply to

Deleted: 8

<sup>36</sup> For example, a Contracted Party could consider implementing a Trusted Notifier scheme that would allow qualification of Requestors that meet certain criteria established by the relevant Contracted Party to obtain automated responses to their disclosure requests.

- 1657 automated processing of disclosure decisions, i.e., requests for which the Central  
 1658 Gateway Manager determines an automated decision to the disclosure request from  
 1659 the Contracted Party is required, as per this recommendation.  
 1660
- 1661 9.13. The EPDP Team expects that aspects of the SSAD such as intake of  
 1662 requests, credential check, request submission validation (format &  
 1663 completeness, not content) could be automated, while it is likely not  
 1664 possible to completely automate all aspects of disclosure request review and  
 1665 disclosure in all cases.  
 1666
- 1667 9.14. In the context of further consideration of potential use cases that are  
 1668 deemed legally permissible in the context of recommendation #18, legally  
 1669 permissible is expected to be determined, in the absence of authoritative  
 1670 guidance (e.g. EDPB, European Court of Justice (ECJ), new law), by the  
 1671 party/parties bearing liability for the automated processing of disclosure  
 1672 decisions.  
 1673
- 1674 9.15. Further to the legal guidance referenced above, the EPDP Team recommends  
 1675 the GNSO Standing Committee (see recommendation #18), in its review, further  
 1676 consider both the safeguards outlined in appendix 2 of the [Advice on use cases](#)  
 1677 [re automation in the context of disclosure of non-public registrant data - April](#)  
 1678 [2020](#) and the use cases outlined in Section 3.4 of [that Advice](#), to consider  
 1679 whether disclosure would constitute a legal or similar significant effect, which  
 1680 might prevent automation of disclosure.  
 1681
- 1682 9.16. The way automated processing of disclosure decisions is expected to work in  
 1683 practice is that the Central Gateway Manager would confirm the request meets  
 1684 the requirements for automated processing and direct the Contracted Party to  
 1685 automatically disclose the requested data to the Requestor. [The mechanism is](#)  
 1686 [expected to be determined during implementation.](#)  
 1687
- 1688 9.17. Consideration will need to be given by all parties involved in SSAD to the  
 1689 requirements that may apply to cross-border data transfers.  
 1690
- 1691 **Recommendation #10. Determining Variable SLAs for response times for SSAD**  
 1692
- 1693 10.1. The EPDP Team recommends that Contracted Parties MUST abide by Service  
 1694 Level Agreements (SLAs) that are developed, implemented, and enforced, and  
 1695 as updated from time to time per Recommendation #18, in accordance with the  
 1696 implementation guidance provided below.  
 1697
- 1698 10.2. For purposes of calculating SLA response time, the EPDP Team recommends the  
 1699 SLA starts when a validated request with all supporting information is provided  
 1700 to the Contracted Party by the Central Gateway Manager and stops when the

Deleted: legal memo

Deleted: the legal memo

Deleted: This could be done in the form of a command via a secure mechanism or some other way that is to be determined during implementation.

1706 Contracted Party responds (via the Central Gateway) with either the  
 1707 information requested, a rejection response, or a request for additional  
 1708 information. A reexamination request or a Requestor response with more  
 1709 information would be considered the start of a new request for SLA calculation  
 1710 purposes.

1711  
 1712 **Priority Matrix for non-automated disclosure requests**  
 1713

Request Type	Priority	Proposed SLA <sup>37</sup> (Compliance at 6 months / 12 months / 18 months)
Urgent Requests	1	1 business day, not to exceed 3 calendar days (85% / 90% / 95%)
ICANN Administrative proceedings	2	Max. 2 business days (85% / 90% / 95%)
All other requests*	3	See implementation guidance below.

1714  
 1715 \*Note: Nothing in these policy recommendations explicitly prohibits the development  
 1716 of new categories and defined SLAs.  
 1717

1718 **Implementation Guidance**

1719  
 1720 10.3 Priority 1 and 2 requirements are intended to be made binding by the  
 1721 consensus policy document. Priority 3 service level requirements can also be  
 1722 made binding as part of the consensus policy document, in consultation with  
 1723 the IRT.

1724 **Proposed Definitions**

1725 **Business days**<sup>38</sup> as defined in the jurisdiction of the Contracted Party.  
 1726 **Mean Response Time:** A rolling average of all response times, automatically calculated  
 1727 frequently (e.g. daily or weekly) as a utility to a Contracted Party to evaluate their own  
 1728 performance at any time.  
 1729 **Response Target Evaluation Interval:** A 3-month period allowing for review of  
 1730 response time performance 4 times per year.  
 1731 **Response Target Value:** The value of the Mean Response Time measurement on the  
 1732 closing day of the Response Target Evaluation Interval.  
 1733 **Compliance Target Value:** The same definition as the Response Target Value, but with  
 1734 a Compliance review of this SLA target.

Deleted: :

<sup>37</sup> Note, the business days referenced in the table are from the moment of Contracted Party receipt of the disclosure request from the Central Gateway Manager.

<sup>38</sup> See also recommendation #6.5.

1736 Contracted Party response time requirements for SSAD requests will ramp up over two  
1737 phases:

Deleted: occur

- 1738 • Phase 1 begins **six (6) months** following the SSAD Policy Effective Date.
- 1739 • Phase 2 begins **one (1) year** following the SSAD Policy Effective Date.

1740 **PHASE 1 (only applies to priority 3 requests)**

1741 10.4. During Phase 1, and continuing on thereafter, Contracted Party response  
1742 \_\_\_\_\_ targets for SSAD Priority 3 requests will be five (5) business days.

Deleted: 3

Deleted:

Deleted: >

1743 10.5. The Central Gateway Manager MUST measure response targets using a Mean  
1744 Response Time, not on a per-response basis.

Deleted: 4

1745 10.6. The SSAD MUST calculate Contracted Party's ongoing Mean Response Time as a  
1746 rolling average, as a utility to a Contracted Party to evaluate their own  
1747 performance at any time.

Deleted: 5

1748 10.7. The SSAD MUST also measure the Response Target Value of the ongoing rolling  
1749 average at the end of the Response Target Evaluation Interval. Only the 3-  
1750 month Response Target Value MUST be used to determine success or failure to  
1751 meet response targets as described below. For the avoidance of doubt, the  
1752 intent of the SSAD providing the Contracted Party with the Mean Response  
1753 Time is to provide a warning to the Contracted Party that there may be an issue  
1754 with its response times and to allow the Contracted Party to remedy the issue in  
1755 a cooperative manner. Contracted Parties must therefore at all times have  
1756 \_\_\_\_\_ access to view their own current Response Target Value. If the Contracted  
1757 \_\_\_\_\_ Party's Response Target Value exceeds five (5) business days, this MUST NOT  
1758 \_\_\_\_\_ result in a policy breach.

Deleted: 6

Deleted: During Phase 1,

Deleted: if

Deleted: >

Deleted: >

1759 Instead, failure to meet a response target will prompt ICANN to alert the  
1760 Contracted Party of a response target failure.

Formatted: Font: (Default) Times New Roman, 12 pt, Font color: Auto

1761 10.8. The Contracted Party MUST respond to the ICANN's response target failure  
1762 notice within five (5) business days.

Deleted: 7

1763 10.9. The Contracted Party's response must include a rationale as to why the  
1764 Contracted Party could not meet its response target.

Deleted: 8

1765 10.10. Failure of the Contracted Party to respond to ICANN's notice MUST be  
1766 considered a breach of the policy; accordingly, the failure to respond to the  
1767 compliance notice will result in an ICANN Compliance inquiry.

Deleted: 9

1782 PHASE 2 (only applies to priority 3 requests)

1783 10.11. In Phase 2, Contracted Party Compliance Targets for SSAD Priority 3 requests  
1784 will be ten (10) business days.

1785 10.12. The Central Gateway Manager MUST measure Compliance Targets using a  
1786 mean response time, not on a per-response basis. The SSAD will calculate  
1787 Contracted Party's mean Compliance Target on the final day of the Response  
1788 Target Evaluation Interval.

1789 10.13. If the Contracted Party's Response Target Value exceeds ten business days, this  
1790 will result in a policy breach, and, accordingly, the Contracted Party will be  
1791 subject to compliance enforcement.

1792 10.14. Response Targets and Compliance Targets MUST be reviewed, at a minimum,  
1793 after every six months in the first year, thereafter annually (depending on the  
1794 outcome of the first review).

1795 10.15. Response targets for disclosure requests that meet the criteria for fully-  
1796 automated responses are expected to be further developed during the  
1797 implementation phase, but these are expected to be under 60 seconds.  
1798

1799 10.16. The Implementation Review Team should further consider the effect of the SLAs  
1800 in instances where additional information is requested from the Contracted  
1801 Party and provided by the Requestor. (Please see Recommendation #8  
1802 Contracted Party Authorization for additional information.)  
1803

1804 Recommendation #11. SSAD Terms and Conditions

1805  
1806 11.1. The EPDP Team recommends that minimum expectations for appropriate  
1807 agreements and policies, such as terms of use for the SSAD, an SSAD privacy  
1808 policy, disclosure agreement and an acceptable use policy are further defined  
1809 during the implementation phase, to be subsequently developed and enforced  
1810 by the entity responsible for the SSAD (by ICANN Org or a third party that has  
1811 been tasked by ICANN Org to take on this enforcement function). These  
1812 agreements and policies MUST take into account all recommendations from  
1813 this policy. These agreements and policies are expected to be developed and  
1814 negotiated, as appropriate, by the parties involved in SSAD, taking the below  
1815 implementation guidance into account.  
1816

1817 11.2 All necessary agreements relating to the processing of data requests via the  
1818 SSAD, MUST include clauses relating to cross border transfers, ensuring a  
1819 commitment by the parties, where applicable, to ensure and provide for an  
1820 adequate level of data protection.

1842  
1843 11.3. The SSAD Terms and Conditions MAY be updated as appropriate by ICANN org  
1844 to address applicable law and practices.

Deleted: 2

1845  
1846 **Implementation guidance:**

1847  
1848 11.4 Privacy Policy for processing of personal data of SSAD Users (SSAD Requestors  
1849 and Contracted Parties) by SSAD

1850  
1851 The EPDP recommends, at a minimum, the privacy policy MUST include  
1852 relevant data protection principles, including:

Deleted: SHALL

- 1853
- 1854 • The type(s) of personal data processed
  - 1854 • How and why the personal data is processed, for example,
    - 1855 ○ verifying identity
    - 1856 ○ communicating service notices
  - 1857 • How long personal data will be retained
  - 1858 • The types of third parties with whom personal data is shared
  - 1859 • Where applicable, details of any international data transfers/requirements thereof
  - 1860 • Information about the data subject rights and the method by which they can exercise these rights
  - 1861 • Notification of how changes to the privacy policy will be communicated
  - 1862 • Transparency requirements
  - 1863 • Data security requirements
  - 1864 • Accountability measures (privacy by design, by default, Data Protection Officer (DPO) above certain size, etc)

1865  
1866  
1867  
1868  
1869 11.5 Terms of Use for SSAD users (SSAD Requestors and Contracted Parties)

1870  
1871 The EPDP recommends, at a minimum, the terms of use MUST address:

Deleted: SHALL

- 1872
- 1873 • Requestor's indemnification of the controllers (entity responsible for disclosure decision) based on the following principles:
    - 1874 ○ Requestors are responsible for damages or costs related to third party claims arising from (i) their misrepresentations in the accreditation or request process; or (ii) misuse of the requested data in violation of the applicable terms of use or applicable law(s).
    - 1875 ○ Nothing in these terms limits any parties' liability or rights of recovery under applicable laws (i.e. Requestors are not precluded from seeking recovery from controllers where those rights are provided under law).
    - 1876 ○ Nothing in these terms shall be construed to create indemnification obligations for public authority Requestors who lack the legal authority to enter into such indemnification clauses. Further, nothing

1889 in this clause shall alter potentially existing government liability as a  
1890 recourse for the operators of the SSAD.

- 1891 ● Data request requirements
- 1892 ● Logging and audit requirements
- 1893 ● Ability to demonstrate compliance
- 1894 ● Applicable prohibitions
- 1895 ● Abuse prevention requirements

1896  
1897 11.6 Disclosure agreements for SSAD Requestors

1898  
1899        The EPDP recommends, at a minimum, disclosure agreements **MUST** address  
1900        the requirements for Requestors after data has been disclosed to the  
1901        Requestor:

Deleted: SHALL

- 1902 ● Use of the data for the purpose indicated in the request
- 1903 ● Requirements for use of data for a new purpose other than the one
- 1904 indicated in the request
- 1905 ● Retention and destruction of data: Requestors MUST confirm that they will
- 1906 store, protect and dispose of the gTLD registration data in accordance with
- 1907 applicable law. Requestors MUST retain only the gTLD registration data for
- 1908 as long as necessary to achieve the purpose stated in the disclosure request,
- 1909 unless otherwise required to retain such data for a longer period under
- 1910 applicable law.
- 1911 ● Lawful use of data

1912  
1913  
1914 11.7 Acceptable Use Policy for SSAD Requestors. The Requestor MUST accept the  
1915        Acceptable Use Policy before disclosure requests can be submitted through  
1916        SSAD.

1917  
1918        At a minimum, the Acceptable Use Policy MUST include the following  
1919        requirements:

1920  
1921        The Requestor:

- 1922 11.7.1. MUST only request data from the current RDS data set (no historic data);
- 1923 **11.7.2** MUST, for each request for RDS data, provide representations of the
- 1924 corresponding purpose and lawful basis for the processing, which will be
- 1925 subject to auditing (see the auditing recommendation #16 for further
- 1926 details);
- 1927 **11.7.3** MAY request data from the SSAD for multiple purposes per request, for
- 1928 the same set of data requested;
- 1929 11.7.4 For each stated purpose must provide (i) representation regarding the
- 1930 intended use of the requested data and (ii) representation that the
- 1931 Requestor will only process the data for the stated purpose(s). These
- 1932

1936 representations will be subject to auditing (see auditing recommendation  
1937 #16 further details).

Formatted: Font color: Black

1938  
1939 **Recommendation #12. Disclosure Requirement**

1940  
1941 12.1. The EPDP Team recommends:

1942  
1943 Contracted Parties:

1944 12.1.1. MUST only disclose the data requested by the Requestor;

Formatted: List Paragraph, Outline numbered + Level: 3 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 0.25" + Indent at: 0.75"

1945 12.1.2. MUST return current data or a subset thereof (no historic data);

1946  
1947 **12.2. Contracted Parties and the Central Gateway Manager:**

Deleted: <sup>39</sup>

1948 **12.2.1.** MUST process data in compliance with applicable law;

Formatted: List Paragraph, Outline numbered + Level: 2 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 0.13" + Indent at: 0.58"

1949 12.2.2. Where required by applicable law, MUST disclose to the Registered  
1950 Name Holder (data subject), on reasonable request, confirmation of the  
1951 processing of personal data relating to them, noting, however, the  
1952 nature of legal investigations or procedures MAY require SSAD and/or  
1953 the disclosing entity to keep the nature or existence of certain requests  
1954 confidential from the data subject. Confidential requests MAY be  
1955 disclosed to data subjects in cooperation with the requesting entity, and  
1956 in accordance with the data subject's rights under applicable law;

Formatted: Indent: Left: 0.46", No bullets or numbering

Formatted: Font: 12 pt

1957 12.2.3. Where required by applicable law, MUST provide mechanism under  
1958 which the data subject may exercise its right to erasure, to object to  
1959 automated processing of its personal information should this processing  
1960 have a legal or similarly significant effect, and any other applicable rights;

Formatted: List Paragraph, Outline numbered + Level: 3 + Numbering Style: 1, 2, 3, ... + Start at: 2 + Alignment: Left + Aligned at: 0.46" + Indent at: 0.96"

Deleted: <sup>40</sup>

Formatted: Font: 12 pt

1961 **12.2.4.** MUST, in a concise, transparent, intelligible and easily accessible form,  
1962 using clear and plain language, provide notice to data subjects, of the  
1963 types of entities/third parties which may process their data. For the  
1964 avoidance of doubt, Contracted Parties MUST provide the above-  
1965 described notice to its registrant customers, and the SSAD MUST provide  
1966 the above-described notice to SSAD users. For Contracted Parties, this  
1967 notice MUST contain information on potential recipients of non-public  
1968 registration data including, but not limited to the recipients listed in  
1969 Recommendation #7 Requestor Purposes, as legally permissible.  
1970 Information duties according to applicable laws may apply additionally,  
1971 but the information referenced above MUST be contained as a minimum.

Formatted: Font: 12 pt

1972  
1973 **Implementation Guidance**

Moved (insertion) [4]

1974  
1975 **12.3** Current data means the data reviewed by the Contracted Party when making  
1976 the determination whether to disclose the data. In order to lower the possibility  
1977 of changes to the data during the pendency of an outstanding disclosure  
1978 request, e.g., if the registrant updates its contact data, Contracted Parties are  
1979 encouraged to disclose data as soon as possible following its decision on

Deleted: <sup>1</sup>

Formatted: Font: 12 pt

Deleted: Implementation guidance:

Formatted: Font: 12 pt

Formatted: Font: 12 pt

Formatted: Font: 12 pt

Formatted: Font: 12 pt

1984 whether to disclose. For the avoidance of doubt, historic data refers to the  
 1985 registration data in place before the request for disclosure was made, not  
 1986 registration data that may have changed as a result of any updates made by the  
 1987 registrant between the time the request for disclosure is reviewed and the  
 1988 decision to disclose the registration data.

1989

1990 **12.4** The nature of legal investigations or procedures are not limited to criminal  
 1991 investigations or to other investigations (e.g. many civil investigations require  
 1992 confidentiality).

1993

1994 **Recommendation #13. Query Policy**

1995

1996 **13.1** The EPDP Team recommends that the Central Gateway Manager:

1997

1998 **13.1.1.** MUST monitor the system and take appropriate action,<sup>41</sup> such as revoking  
 1999 or limiting access, to protect against abuse or misuse of the system;

2000 **13.1.2.** MAY take measures to limit the number of requests that are submitted by  
 2001 the same Requestor if it is demonstrated that the requests are of an abusive  
 2002 nature;

2003

2004 “Abusive” use of SSAD MAY include (but is not limited to) the detection of one  
 2005 or more of the following behaviors/practices:

2006

2007 13.1.2.1. High volume automated submissions of malformed or  
 2008 incomplete requests.

2009 13.1.2.2. High volume<sup>42</sup> automated duplicate requests that are; frivolous,  
 2010 malicious or vexatious.

2011 13.1.2.3. Use of false, stolen or counterfeit credentials to access the  
 2012 system.

2013 13.1.2.4. Storing/delaying and sending high-volume requests causing the  
 2014 SSAD or other parties to fail SLA performance. When  
 2015 investigating abuse based on this specific behavior, the concept  
 2016 of proportionality should be considered.

2017

2018 **13.1.3.** As with other access policy violations, abusive behavior can ultimately result  
 2019 in suspension or termination of access to the SSAD. In the event the Central  
 2020 Gateway Manager makes a determination based on abuse to limit the  
 2021 number of requests from a Requestor, the Requestor MAY seek redress<sup>43</sup> via  
 2022 ICANN org if it believes the determination is unjustified. For the avoidance  
 2023 of doubt, if the SSAD receives a high volume of requests from the same

- Moved [1]: Implementation guidance: Abusive behavior can ultimately result in suspension or termination of access to the SSAD; however, a graduated penalty scheme should be considered in implementation. There may, however, be certain instances of egregious abuse, such as counterfeiting

<sup>41</sup> The EPDP Team expects that ‘appropriate action’ will be further defined in the implementation phase.

<sup>42</sup> The EPDP Team expects that ‘high volume’ will be further defined in the implementation phase.

<sup>43</sup> For clarity, redress would be in the form of reconsideration by the Central Gateway Manager, for which the Requestor may provide new information but is not required to do so.

2038 Requestor, the volume alone must not result in a de facto determination of  
2039 system abuse.

2041 13.1.4. MUST respond only to requests for a specific domain name for which non-  
2042 public registration data is requested to be disclosed and MUST examine<sup>44</sup>  
2043 each request individually and not in bulk, regardless of whether the  
2044 consideration is done automatically or through meaningful review.

2046 13.2. The EPDP Team recommends that Contracted Parties:

2047 13.2.1. MUST NOT reject disclosure requests from SSAD on the basis of abusive  
2048 behavior which has not been determined abusive by the Central  
2049 Gateway Manager as per a) and b) above. However, Contracted Parties  
2050 must also have some means to report this behavior back up to the  
2051 CGM/SSAD. The Central Gateway Manager MUST provide a mechanism  
2052 for Contracted Parties to report perceived abusive requestors/requests  
2053 and provide a determination regarding the requestor/request within the  
2054 timeframe allowed for the Contracted Party to provide a response.  
2055 Alternatively, the Contracted Party shall be permitted to delay  
2056 providing a response until such time that the Central Gateway  
2057 Manager has reviewed the report of abuse and made a determination.

2059 13.3. The EPDP Team recommends:

2060 13.3.1. The Central Gateway Manager MUST support requests keyed on fully  
2061 qualified domain names (without wildcards).

2062 13.3.2. The Central Gateway Manager MUST support the ability of a Requestor  
2063 to submit multiple domain names in a single request.<sup>46</sup>

2064 13.3.3. For disclosure requests that are not subject to the automated processing  
2065 of the disclosure decision, the Central Gateway Manager MUST route  
2066 each domain individually to the Contracted Party responsible for the  
2067 disclosure decision (this may require SSAD to split a request into multiple  
2068 transactions).

2069 13.3.4. Notwithstanding the recommendations relating to the management of  
2070 abusive behavior, the Central Gateway Manager and Contracted Parties  
2071 MUST have the capacity to handle a reasonable number of requests in  
2072 alignment with the SLAs established.

2073 13.3.5. The Central Gateway Manager MUST only support requests for current  
2074 data (no data about the domain name registration's history).

2075 13.3.6. The SSAD MUST be able to save the history of the different disclosure  
2076 requests, in order to keep traceability of exchanges between the SSAD  
2077 Requestors and Contracted Parties via the SSAD. Appropriate safeguards  
2078 need to put in place to safeguard this information. Appropriate access to

Deleted: Implementation guidance: an SSAD request must be received for each domain name registration for which non-public registration is requested to be disclosed but it must be possible for Requestors to submit multiple requests at the same time, for example, by entering multiple domain name registrations in the same request form provided that the same request information applies.

<sup>44</sup> It is the expectation that this examination is done automatically.

<sup>46</sup> The EPDP Team expects implementation to reasonably determine how many may be submitted at a time, consistent with the Query Policy.

2083 such relevant activity statistics should be provided to the CPs, as deemed  
 2084 necessary, to ensure that all relevant information relating to requests for  
 2085 disclosure are available for consideration in such disclosure decisions.

Deleted: 47

2087 See also the Acceptable Use Policy requirements in recommendation #11 – Terms and  
 2088 Conditions.

2089 Implementation Guidance

2092 13.4 Abusive behavior can ultimately result in suspension or termination of access to  
 2093 the SSAD; however, a graduated penalty scheme should be considered in  
 2094 implementation. There may, however, be certain instances of egregious abuse,  
 2095 such as counterfeiting or stealing credentials, where termination would be  
 2096 immediate.

Moved (insertion) [1]  
 Deleted: Implementation guidance:

2098 13.5 An SSAD request must be received for each domain name registration for which  
 2099 non-public registration is requested to be disclosed but it must be possible for  
 2100 Requestors to submit multiple requests at the same time, for example, by  
 2101 entering multiple domain name registrations in the same request form provided  
 2102 that the same request information applies.

2104 13.6 In relation to “Appropriate access to such relevant activity statistics should be  
 2105 provided to the CPs, as deemed necessary” in 13.3, this is expected to be  
 2106 limited to a CP’s own activity.,

2107 **Recommendation #14. Financial Sustainability**

2109 14.1. The EPDP Team recommends that, in considering the costs and financial  
 2110 sustainability of SSAD, one needs to distinguish between the development and  
 2111 operationalization of the system and the subsequent running of the system.

2114 14.2. The objective is that the SSAD is financially self-sufficient without causing any  
 2115 additional fees for registrants. Data subjects MUST NOT bear the costs for  
 2116 having data disclosed to third parties; Requestors of the SSAD data  
 2117 should primarily bear the costs of maintaining this system. Furthermore, Data  
 2118 Subjects MUST NOT bear the costs of processing of data disclosure requests,  
 2119 which have been denied by Contracted Parties following evaluation of the  
 2120 requests submitted by SSAD users. ICANN MAY contribute to the (partial)  
 2121 covering of costs for maintaining the Central Gateway, For clarity, the EPDP  
 2122 Team understands that registrants are ultimately the source of much of ICANN’s  
 2123 revenue. This revenue does not per se violate the restriction that “[d]ata  
 2124 subjects MUST NOT bear the costs for having data disclosed to third parties.”  
 2125 Data subjects MUST NOT be charged a separate fee by the Central Gateway for  
 2126 having their data requested by or disclosed to third parties. However, the EPDP

Deleted: 48

Deleted: 49

Formatted: Font: Not Bold

2131 Team notes that registered name holders will always indirectly bear any costs  
 2132 incurred by registrars and registries. The EPDP Team also understands that the  
 2133 RAA prohibits ICANN from limiting what Registrars may charge. RAA 3.7.12  
 2134 states: "Nothing in this Agreement prescribes or limits the amount Registrar  
 2135 may charge Registered Name Holders for registration of Registered Names.

2137 14.3 The prospective users of the SSAD, as determined based on the implementation  
 2138 of the accreditation process and Identity Providers to be used, should be  
 2139 consulted on setting usage fees for the SSAD. In particular, those potential SSAD  
 2140 requestors who are not part of the ICANN community must have the  
 2141 opportunity to comment and interact with the IRT. This input should help  
 2142 inform the IRT deliberations on this topic.

2144 14.4. The SSAD SHOULD NOT be considered a profit-generating platform for ICANN or  
 2145 the contracted parties. Funding for the SSAD should be sufficient to cover costs,  
 2146 including for subcontractors at fair market value and to establish a legal risk  
 2147 fund.<sup>50</sup> It is crucial to ensure that any payments in the SSAD are related to  
 2148 operational costs and are not simply an exchange of money for non-public  
 2149 registration data.

2151 14.5. In relation to the accreditation framework:

2152 14.5.1. Accreditation applicants MUST be charged a to-be-determined non-  
 2153 refundable fee proportional to the cost of validating an application,  
 2154 except under certain circumstances these fees may be waived or  
 2155 zero for certain types or categories of applicants which SHOULD be  
 2156 further defined during the implementation phase.

2157 14.5.2. Rejected applicants MAY re-apply, but the new application(s) MAY  
 2158 be subject to the application fee.

2159 14.5.3. Fees are to be established by the accreditation authority. If the  
 2160 Accreditation Authority outsources the Identity Provider function,  
 2161 the Identity Provider MAY establish its own fees after consulting the  
 2162 Accreditation Authority.

2163 14.5.4. Accredited users and organizations MUST renew their accreditation  
 2164 periodically.

2166 **Implementation Guidance**

2167 14.6. The EPDP Team expects that the costs for developing, deployment and  
 2168 operationalizing the system, similar to the implementation of other adopted

<sup>50</sup> Given the potential for legal uncertainty and the heightened legal and operational risk on all parties included in the provision of the SSAD, creation of a legal risk fund refers to the creation of a suitable legal contingency plan, including but not limited to appropriate insurance cover, and any other appropriate measures that may be deemed sufficient to cover potential regulatory fines or related legal costs.

2173 policy recommendations, to be initially borne by ICANN org,<sup>51</sup> Contracted  
 2174 Parties and other parties that may be involved.<sup>52</sup> As part of the  
 2175 operationalization of SSAD, ICANN org is expected to consider building on  
 2176 existing mechanisms or using an RFP process to reduce costs rather than  
 2177 building the SSAD and its components from scratch. It is the EPDP Team’s  
 2178 expectation that the SSAD will ultimately result in equal or lesser costs to  
 2179 Contracted Parties compared to manual receipt and review of requests as a  
 2180 measure of commercial and technical feasibility.  
 2181  
 2182 14.7. The subsequent running of the system is expected to happen on a cost recovery  
 2183 basis whereby historic costs<sup>53</sup> may be considered. For example, the costs  
 2184 associated with becoming accredited would be borne by those seeking  
 2185 accreditation. Similarly, some of the costs of running the SSAD **SHOULD** be  
 2186 offset by charging fees to the users of the SSAD.  
 2187  
 2188 14.8. When implementing and operating the SSAD, a disproportionately high burden  
 2189 on smaller operators should be avoided.  
 2190  
 2191 14.9. The EPDP Team recognizes that the fees associated with using the SSAD may  
 2192 differ for users based on request volume or user type among other potential  
 2193 factors. The EPDP Team also recognizes that governments may be subject to  
 2194 certain payment restrictions, which should be taken into account as part of the  
 2195 implementation.  
 2196  
 2197 14.10. The fee structure as well as the renewal period is to be determined in the  
 2198 implementation phase, following the principles outlined above. The EPDP Team  
 2199 recognizes that it may not be possible to set the exact fees until the actual costs  
 2200 are known. The EPDP Team also recognizes that the SSAD fee structure may  
 2201 need to be reviewed over time.  
 2202  
**Recommendation #15. Logging**  
 2203  
 2204  
 2205 15.1. The EPDP Team recommends that that the appropriate logging procedures  
 2206 MUST be put in place to facilitate the auditing procedures outlined in these  
 2207 recommendations. These logging requirements will cover the following:  
 2208  
 2209 • Accreditation authority  
 2210 • Central Gateway Manager  
 2211 • Identity provider

**Deleted:** 6

**Deleted:** if the SSAD includes an accreditation framework under which users of the SSAD could become accredited,

**Deleted:** may

**Deleted:** 7

**Deleted:** 8

**Deleted:** ¶  
**Implementation guidance: (associated with disclosure requests):** ¶  
 ¶  
 14.9. →There are various implementation details that may have policy implications, particularly with respect to cost distribution and choice of party who performs various data protection functions. These issues are collected here under Implementation Guidance for consideration. ¶

<sup>51</sup> See also the input that [ICANN Org provided at the EPDP Team’s request in relation to the cost estimate for a Proposed System for Standardized Access/Disclosure](https://community.icann.org/x/GIIeC) (see <https://community.icann.org/x/GIIeC>)  
<sup>52</sup> For clarity, ICANN org will bear its own costs for developing the system. Contracted Parties will be responsible for their own costs.  
<sup>53</sup> Historic costs refer to the costs for developing, deployment, and operationalizing of the system.

- Contracted Parties
- Activity of accredited users such as login attempts, queries
- What queries and disclosure decision(s) are made

15.2. The EPDP Team recommends:

- 15.2.1. The Central Gateway Manager **MUST** make logs of all activities of all entities which interact with the Central Gateway Manager (for further details, please see below).
  - 15.2.2. Logs **MUST** include a record of all queries and all items necessary to audit any decisions made in the context of SSAD.
  - 15.2.3. Logs **MUST** be retained for a period sufficient for auditing and complaint resolution purposes, taking into account statutory limits related to complaints against the controller.
  - 15.2.4. Logs **SHOULD NOT** contain any personal information. If any information is logged that does contain personal information, appropriate safeguards need to be in place. Logs **MAY be used for transparency reports, which may be made publicly available.** (see also recommendation #17 on reporting requirements). Logged data that contains personal information **MUST** remain confidential.
  - 15.2.5. Logs **MUST** be retained in a commonly used,<sup>54</sup> machine-readable format accompanied by an intelligible description of all variables.
  - 15.2.6. Relevant logged data **MUST** be disclosed, when legally permissible, in the following circumstances:
    - In the event of a claim of misuse, logs may be requested for examination by an accreditation authority or dispute resolution provider.
    - Logs should be further available to ICANN and the auditing body.
    - When mandated as a result of due legal process, including relevant enforcement and regulatory authorities, as applicable.
  - 15.2.7. Relevant logged data **MAY** be disclosed for:
    - General technical operation to ensure proper running of the system.
  - 15.2.8. Relevant logs should be used as the source to make available any relevant data. This data should enable Requestors and Contracted Parties to review their own statistics.
- 15.3. At a minimum, the following events **MUST** be logged:
- Logging related to the Identity Provider<sup>55</sup>
  - Logging related to the Accreditation Authority
    - Details of incoming requests for Accreditation

<sup>54</sup> For clarity, "commonly" is intended to mean a format that is used by many, as opposed to a uniform format for all.  
<sup>55</sup> To be further detailed in the implementation phase.

- 2274 • Results of processing requests for Accreditation, e.g., issuance of the
- 2275 Identity Credential or reasons for denial
- 2276 • Details of Revocation Requests
- 2277 • Indication when Identity Credentials and Signed Assertions have been
- 2278 Validated.
- 2279 • Unique reference number
- 2280 • Logging related to the Central Gateway Manager
- 2281 • Information related to the contents of the query itself.
- 2282 • Results of processing the query, including changes of state (e.g.,
- 2283 received, pending, in-process, denied, approved, approved with
- 2284 changes)
- 2285 • Rates of:
- 2286 • disclosure and non-disclosure;
- 2287 • use of each reason for denial for non-disclosure;
- 2288 • divergence between the disclosure and non-disclosure decisions
- 2289 of a CP and the recommendations of the Central Gateway.
- 2290 • Logging related to Contracted Parties
- 2291 • Request Response details, e.g., Reason for denial, notice of approval and
- 2292 data fields released. Disclosure decisions including a reason for denial
- 2293 must be stored.

#### 2294 **Recommendation #16. Audits**

- 2295
- 2296
- 2297 16.1. The EPDP Team recommends that the appropriate auditing processes and
- 2298 procedures MUST be put in place to ensure appropriate monitoring and
- 2299 compliance with the requirements outlined in these recommendations.
- 2300
- 2301 16.2. As part of any audit, the auditor MUST be subject to reasonable confidentiality
- 2302 obligations with respect to proprietary processes and personal information
- 2303 disclosed during the audit.

2304

2305 More specifically:

#### 2306 **Audits of the Accreditation Authority**

- 2307
- 2308
- 2309 16.3. If ICANN outsources the accreditation authority function to a qualified third
- 2310 party, the accrediting authority MUST be audited periodically to ensure
- 2311 compliance with the policy requirements as defined in the accreditation
- 2312 recommendation. Should the accreditation authority be found in breach of the
- 2313 accreditation policy and requirements, it will be given an opportunity to cure
- 2314 the breach, but in cases of repeated non-compliance or audit failure, a new
- 2315 accreditation authority must be identified or created. ICANN org as the
- 2316 Accreditation Authority is not required to audit governmental entities, whose
- 2317 accreditation and audit requirements are defined in Recommendation #2.

- 2318
- 2319 16.4. Any audit of the accreditation authority MUST be tailored for the purpose of
- 2320 assessing compliance, and the auditor MUST give reasonable advance notice of
- 2321 any such audit, which notice shall specify in reasonable detail the categories of
- 2322 documents, data, and other information requested.
- 2323
- 2324 16.5. As part of such audits, the accreditation authority MUST provide to the auditor
- 2325 in a timely manner all responsive documents, data, and any other information
- 2326 necessary to demonstrate its compliance with the accreditation policy.
- 2327
- 2328 16.6. If ICANN serves as the accreditation authority, existing accountability
- 2329 mechanisms are expected to address any breaches of the accreditation policy,
- 2330 noting that in such an extreme case, the credentials issued during the time of
- 2331 the breach will be reviewed. Modalities of this review SHOULD be established in
- 2332 the implementation phase.

Deleted: shall

**Audits of Identity Provider(s)**

- 2334
- 2335
- 2336 16.7. Identity Providers MUST be audited periodically to ensure compliance with the
- 2337 policy requirements as defined in the accreditation recommendation. Should
- 2338 the Identity Provider be found in breach of the accreditation policy and
- 2339 requirements, it will be given an opportunity to cure the breach, but in cases of
- 2340 repeated non-compliance or audit failure, a new Identity Provider must be
- 2341 identified.
- 2342
- 2343 16.8. Any audit of an Identity Provider MUST be tailored for the purpose of assessing
- 2344 compliance, and the auditor MUST give reasonable advance notice of any such
- 2345 audit, which notice shall specify in reasonable detail the categories of
- 2346 documents, data and other information requested.
- 2347
- 2348 16.9. As part of such audits, the Identity Provider MUST provide to the auditor in a
- 2349 timely manner all responsive documents, data, and any other information
- 2350 necessary to demonstrate its compliance with the accreditation policy.

**Audits of Accredited Entities/Individuals**

- 2352
- 2353
- 2354 16.10. Appropriate mechanisms MUST be developed in the implementation phase to
- 2355 ensure accredited entities' and individuals' compliance with the policy
- 2356 requirements as defined in the accreditation recommendations #1 and 2. These
- 2357 could include, for example, audits triggered by verified complaints, random
- 2358 audits, or audits in response to a self-certification or self-assessment. Should
- 2359 the accredited entity or individual be found in breach of the accreditation policy
- 2360 and requirements, it will be given an opportunity to cure the breach, but in
- 2361 cases of repeated non-compliance or audit failure the matter should be referred

Deleted: 16

2364 back to the Accreditation Authority and/or Identity Provider, if applicable, for  
 2365 action.  
 2366  
 2367 16.11. Any audit of accredited entities/individuals MUST be tailored for the purpose of  
 2368 assessing compliance, and the auditor MUST give reasonable advance notice of  
 2369 any such audit, which notice MUST specify in reasonable detail the categories of  
 2370 documents, data and other information requested.  
 2371  
 2372 16.12. As part of such audits, the accredited entity/individual MUST, in a timely  
 2373 manner, provide to the auditor all responsive documents, data, and any other  
 2374 information necessary to demonstrate its compliance with the accreditation  
 2375 policy.  
 2376

2377 **Recommendation #17. Reporting Requirements**  
 2378

2379 17.1. The EPDP Team recommends that ICANN org **MUST** establish regular public  
 2380 reporting on the use and functioning of the SSAD. For the avoidance of doubt,  
 2381 this recommendation does not intend to prevent ICANN org from conducting  
 2382 additional non-public reporting to SSAD users.  
 2383

Deleted: →  
 Deleted: →

2384 **17.2** No earlier than 3 months and no later than 9 months after the  
 2385 operationalization of SSAD, ICANN org **MUST** publish an SSAD Status Report or  
 2386 dashboard, and continue to do so on a quarterly basis, that will include at a  
 2387 minimum:

Moved (insertion) [2]  
 Deleted: will

- 2388 · Number of disclosure requests received;
- 2389 · Average response times to the disclosure requests, categorized  
 2390 by priority level;
- 2391 · Number of requests categorized by third-party purposes /  
 2392 justifications (as identified in recommendation #4);
- 2393 · Number of disclosure requests approved and denied;
- 2394 · Number of disclosure requests automated;
- 2395 · Number of requests processed manually;
- 2396 · Information about financial sustainability of SSAD;
- 2397 · New EDPB guidance or new topical jurisprudence (if any);

2400 **Implementation guidance:**  
 2401

2402  
 2403 **17.3.** The EPDP Team recommends that further consideration is given during  
 2404 implementation to:

- 2405 • The frequency of public reporting – public reporting on a quarterly basis  
 2406 would be considered reasonable;  
 2407

- Data to be reported on, which is expected to include information such as: a) number of disclosure requests; b) disclosure requests per category of Requestors; c) disclosure requests per Requestor (for legal entities); disclosure requests granted / denied, and; response times. Please note that this is a non-exhaustive list.
- Mechanism for public reporting – consider the possibility of a publicly-available dashboard instead of or in addition to reports that are posted;
- Needs for possible confidentiality in certain cases such as information about natural persons and LEA requests. Aggregate data or pseudonymization could be considered to address possible confidentiality concerns.

**Recommendation #18. Review of implementation of policy recommendations concerning SSAD using a GNSO Standing Committee**

18.1. The EPDP Team recommends that **the GNSO Council MUST establish** a GNSO Standing Committee to evaluate SSAD operational issues emerging as a result of adopted ICANN Consensus Policies and/or their implementation. The GNSO Standing Committee is intended to examine data being produced as a result of SSAD operations, and provide the GNSO Council with Recommendations on how best to make operational changes to the SSAD, which are strictly implementation measures, in addition to Recommendations based on reviewing the impact of existing Consensus Policies on SSAD operations.

18.2. The EPDP Team also recommends that **the GNSO Council use** the following principles as the basis by which the GNSO Standing Committee shall conduct its mission, which must be reflected in its charter:

**18.2.1 Composition:** The composition of the GNSO Standing Committee shall be representative of the ICANN Advisory Committees and GNSO Stakeholder Groups and Constituencies represented in the current EPDP Team on the Temporary Specification for gTLD Registration Data. This composition shall include at least one member from the GAC, ALAC, SSAC, RySG, RrSG, NCSG, IPC, BC and ISPCP, as well as at least one alternate member from each group. Note, the number of members per group should not impact the consensus designation process as positions are expected to be considered per group and not at the individual member level. The GNSO Council may also consider inviting ICANN org liaisons as members to the GNSO Standing Committee.

**18.2.2. Scope:** A Charter must be developed by the GNSO Council in conjunction with Advisory Committees, e.g., GAC, SSAC, and ALAC for the GNSO Standing Committee. The Charter must allow the

2483 Committee to address any operational issues involving the SSAD.  
 2484 This may include, but is not limited to, topics such as Service Level  
 2485 Agreements (SLAs), centralization / de-centralization, automation,  
 2486 third party purposes, financial sustainability and operational /  
 2487 system enhancements. The threshold for accepting an issue being on  
 2488 the GNSO Standing Committee’s agenda shall be low enough to  
 2489 allow any of the groups involved the ability to have their interests in  
 2490 SSAD operations seriously considered by the Committee.  
 2491 Identification of issues, which the Committee may address shall be  
 2492 determined using the following two methods:  
 2493 i. Any policy or implementation topic concerning SSAD  
 2494 operations may be raised by a member of the GNSO Standing  
 2495 Committee, and shall be placed on the Committee’s working  
 2496 agenda if seconded by at least one other ‘group’s’ Committee  
 2497 member.  
 2498 ii. Additionally, the GNSO Council may identify SSAD operational  
 2499 issues. The GNSO Council may choose to task the GNSO Standing  
 2500 Committee with evaluation of issues it identifies, in order for the  
 2501 Committee to provide the Council with consensus  
 2502 recommendations by the affected stakeholders on how best to  
 2503 address them.

Formatted: Indent: Left: 1.5"

Deleted: other

2504  
 2505 \_\_\_\_\_ Recommendations concerning implementation guidance shall be sent to  
 2506 \_\_\_\_\_ the GNSO Council for consideration and adoption, after which they will  
 2507 \_\_\_\_\_ be sent to ICANN Org for further implementation work.  
 2508 \_\_\_\_\_ Recommendations which require changes being made to existing ICANN  
 2509 \_\_\_\_\_ Consensus Policies shall be recorded and maintained, to be used in the  
 2510 \_\_\_\_\_ issues scoping phase of future policy development and/or review.

2511 18.2.3. Required Consensus: Consensus Level for GNSO Standing Committee  
 2512 Recommendations: Recommendations on SSAD operations and  
 2513 policies developed by the Standing Committee must achieve  
 2514 consensus of the members of the Committee in order to be sent as  
 2515 formal recommendations to the GNSO Council. For  
 2516 recommendations to achieve a consensus designation, the support  
 2517 of the Contracted Parties will be required. For the purpose of  
 2518 assessing level of consensus, Members are required to represent the  
 2519 formal position of their SG/C or SO/AC, not individual views or  
 2520 positions. -For the purposes of determining the level of consensus,  
 2521 each of the nine groups comprising consensus must have equal  
 2522 weight subject to the requirement that CPs must support specific  
 2523 recommendations.  
 2524  
 2525

2527 18.2.4. Disbanding the GNSO Standing Committee: The Standing Committee  
 2528 may recommend to the GNSO Council that the Committee itself be  
 2529 disbanded, should the need arise. In order for the Standing  
 2530 Committee to recommend to the GNSO Council that it be disbanded,  
 2531 an affirmative vote of a simple majority of the groups involved is  
 2532 required. This recommendation would subsequently need to be  
 2533 adopted by the GNSO Council.

2534 **3.6 EPDP Team Priority 2 Recommendations**

2535 **Recommendation #19. Display of information of affiliated privacy / proxy**  
 2536 **providers**

2537 19.1. In the case of a domain name registration where an accredited privacy/proxy  
 2538 service is used, e.g., where data associated with a natural person is masked,  
 2539 \_\_\_\_\_ Registrar (and Registry, where applicable) **MUST** include the full RDDS data of  
 2540 \_\_\_\_\_ the accredited privacy/proxy service in response to an RDDS query. The full  
 2541 \_\_\_\_\_ privacy/proxy RDDS data may also include a pseudonymized email.

2542 Implementation notes:

2543 19.2 Once ICANN org has implemented a privacy/proxy service accreditation  
 2544 \_\_\_\_\_ program, this recommendation once in effect replaces or otherwise  
 2545 \_\_\_\_\_ supersedes EPDP phase 1 recommendation #14.

2546 19.3 The intent of this recommendation is to provide clear instruction to  
 2547 \_\_\_\_\_ registrars (and registries where applicable) that where a domain registration is  
 2548 \_\_\_\_\_ done via accredited privacy/proxy provider, that data **MUST NOT** also be  
 2549 \_\_\_\_\_ redacted. The working group is intending that domain registration data **MUST**  
 2550 \_\_\_\_\_ NOT be both redacted and privacy/proxied.

2551 **Recommendation #20. City Field**

2552 The EPDP Team recommends that the EPDP Phase 1 recommendation #11 is updated  
 2553 to state that redaction **MAY** be applied to the city field in reference to the registrant's  
 2554 contact information, instead of **MUST**.

2555 **Recommendation #21. Data Retention**

2556 The EPDP Team confirms its recommendation from phase 1 that registrars **MUST** retain  
 2557 only those data elements deemed necessary for the purposes of the TDRP, for a period  
 2558 of fifteen months following the life of the registration plus three months to implement  
 2559 the deletion, i.e., 18 months. This retention is grounded on the stated policy stipulation  
 2560 within the TDRP that claims under the policy may only be raised for a period of 12  
 2561 months after the alleged breach (FN: see TDRP section 2.2) of the Transfer Policy (FN:  
 2562 see Section 1.15 of TDRP). For clarity, this does not prevent Requestors, including

- Deleted: ¶
- Deleted: →
- Deleted: →
- Deleted: →
- Deleted: should
- Deleted: →

Deleted: be required to

2577 ICANN Compliance, from requesting disclosure of these retained data elements for  
2578 purposes other than TDRP, but disclosure of those will be subject to relevant data  
2579 protection laws, e.g., does a lawful basis for disclosure exist. For the avoidance of  
2580 doubt, this retention period does not restrict the ability of registries and registrars to  
2581 retain data elements for longer periods.

2582  
2583 **Implementation Guidance:**

2584 For the avoidance of doubt, registrars are required to maintain the data for 15 months  
2585 following the life of the registration and MAY delete that data following the 15-month  
2586 period.

2587  
2588 For clarity, this does not prevent the identification of additional retention periods for  
2589 stated purposes by the controllers, as identified and as established by the controllers,  
2590 for purposes other than TDRP; this does not exclude the potential disclosure of such  
2591 retained data to any party, subject to relevant data protection laws.

2592  
2593 **Recommendation #22. Purpose 2**

2594 The EPDP Team recommends the following purpose be added to the EPDP Team Phase  
2595 1 purposes, which form the basis of the new ICANN policy:

- 2596  
2597 • Contribute to the maintenance of the security, stability, and resiliency of the  
2598 Domain Name System in accordance with ICANN's mission.

2599 **3.7 EPDP Team Priority 2 Conclusions**

2600  
2601 **Conclusion – OCTO Purpose**

2602 Having considered this input, most members of the EPDP Team agreed that at this  
2603 stage, there is no need to propose an additional purpose(s) to facilitate ICANN's Office  
2604 of the Chief Technology Officer (OCTO) in carrying out its mission. This reason for this  
2605 agreement is because the newly updated ICANN Purpose 2 sufficiently covers the work  
2606 of the OCTO, along with the work of other ICANN org teams such as Contractual  
2607 Compliance and others. Most also agreed that the EPDP Team's decision to refrain  
2608 from proposing an additional purpose(s) would not prevent ICANN org and/or the  
2609 community from identifying additional purposes to support unidentified future  
2610 activities that may require access to non-public registration data.

2611  
2612 **Conclusion – Accuracy and WHOIS Accuracy Reporting System**

2613 Per the instructions from the GNSO Council, the EPDP Team will not consider this topic  
2614 further; instead, the GNSO Council is expected to form a scoping team to further  
2615 explore the issues in relation to accuracy and ARS to help inform a decision on  
2616 appropriate next steps to address potential issues identified.

2617  
2618

2619

## 2620 4 Next Steps

### 2621 4.1 Next Steps

2622  
2623 This Final Report will be submitted to the GNSO Council for its consideration and  
2624 approval. If adopted by the GNSO Council, the Final Report would then be forwarded to  
2625 the ICANN Board of Directors for its consideration and, potentially, approval as an  
2626 ICANN Consensus Policy.

2627

2628

2629

## 2630 Glossary

### 2631 1. Advisory Committee

2632 An Advisory Committee is a formal advisory body made up of representatives from the  
2633 Internet community to advise ICANN on a particular issue or policy area. Several are  
2634 mandated by the ICANN Bylaws and others may be created as needed. Advisory  
2635 committees have no legal authority to act for ICANN, but report their findings and  
2636 make recommendations to the ICANN Board.

### 2637 2. ALAC - At-Large Advisory Committee

2638 ICANN's At-Large Advisory Committee (ALAC) is responsible for considering and  
2639 providing advice on the activities of the ICANN, as they relate to the interests of  
2640 individual Internet users (the "At-Large" community). ICANN, as a private sector, non-  
2641 profit corporation with technical management responsibilities for the Internet's  
2642 domain name and address system, will rely on the ALAC and its supporting  
2643 infrastructure to involve and represent in ICANN a broad set of individual user  
2644 interests.

### 2645 3. Business Constituency

2646 The Business Constituency represents commercial users of the Internet. The Business  
2647 Constituency is one of the Constituencies within the Commercial Stakeholder Group  
2648 (CSG) referred to in Article 11.5 of the ICANN bylaws. The BC is one of the stakeholder  
2649 groups and constituencies of the Generic Names Supporting Organization (GNSO)  
2650 charged with the responsibility of advising the ICANN Board on policy issues relating to  
2651 the management of the domain name system.

### 2652 4. ccNSO - The Country-Code Names Supporting Organization

2653 The ccNSO the Supporting Organization responsible for developing and recommending  
2654 to ICANN's Board global policies relating to country code top-level domains. It provides  
2655 a forum for country code top-level domain managers to meet and discuss issues of  
2656 concern from a global perspective. The ccNSO selects one person to serve on the  
2657 board.  
2658

### 2659 5. ccTLD - Country Code Top Level Domain

2660 ccTLDs are two-letter domains, such as .UK (United Kingdom), .DE (Germany) and .JP  
2661 (Japan) (for example), are called country code top level domains (ccTLDs) and  
2662 correspond to a country, territory, or other geographic location. The rules and policies  
2663 for registering domain names in the ccTLDs vary significantly and ccTLD registries limit  
2664 use of the ccTLD to citizens of the corresponding country.

2665 For more information regarding ccTLDs, including a complete database of designated  
2666 ccTLDs and managers, please refer to <http://www.iana.org/cctld/cctld.htm>.

**2667 6. Domain Name Registration Data**

2668 Domain name registration data, also referred to registration data, refers to the  
2669 information that registrants provide when registering a domain name and that  
2670 registrars or registries collect. Some of this information is made available to the public.  
2671 For interactions between ICANN Accredited Generic Top-Level Domain (gTLD) registrars  
2672 and registrants, the data elements are specified in the current RAA. For country code  
2673 Top Level Domains (ccTLDs), the operators of these TLDs set their own or follow their  
2674 government's policy regarding the request and display of registration information.

**2675 7. Domain Name**

2676 As part of the Domain Name System, domain names identify Internet Protocol  
2677 resources, such as an Internet website.

2678

**2679 8. DNS - Domain Name System**

2680 DNS refers to the Internet domain-name system. The Domain Name System (DNS)  
2681 helps users to find their way around the Internet. Every computer on the Internet has a  
2682 unique address - just like a telephone number - which is a rather complicated string of  
2683 numbers. It is called its "IP address" (IP stands for "Internet Protocol"). IP Addresses are  
2684 hard to remember. The DNS makes using the Internet easier by allowing a familiar  
2685 string of letters (the "domain name") to be used instead of the arcane IP address. So  
2686 instead of typing 207.151.159.3, you can type [www.internic.net](http://www.internic.net). It is a "mnemonic"  
2687 device that makes addresses easier to remember.

2688

**2689 9. EPDP – Expedited Policy Development Process**

2690 A set of formal steps, as defined in the ICANN bylaws, to guide the initiation, internal  
2691 and external review, timing and approval of policies needed to coordinate the global  
2692 Internet's system of unique identifiers. An EPDP may be initiated by the GNSO Council  
2693 only in the following specific circumstances: (1) to address a narrowly defined policy  
2694 issue that was identified and scoped after either the adoption of a GNSO policy  
2695 recommendation by the ICANN Board or the implementation of such an adopted  
2696 recommendation; or (2) to provide new or additional policy recommendations on a  
2697 specific policy issue that had been substantially scoped previously, such that extensive,  
2698 pertinent background information already exists, e.g. (a) in an Issue Report for a  
2699 possible PDP that was not initiated; (b) as part of a previous PDP that was not  
2700 completed; or (c) through other projects such as a GNSO Guidance Process.

**2701 10. GAC - Governmental Advisory Committee**

2702 The GAC is an advisory committee comprising appointed representatives of national  
2703 governments, multi-national governmental organizations and treaty organizations, and  
2704 distinct economies. Its function is to advise the ICANN Board on matters of concern to  
2705 governments. The GAC will operate as a forum for the discussion of government  
2706 interests and concerns, including consumer interests. As an advisory committee, the  
2707 GAC has no legal authority to act for ICANN, but will report its findings and  
2708 recommendations to the ICANN Board.

**2709 11. General Data Protection Regulation (GDPR)**

2710 The General Data Protection Regulation (EU) 2016/679 (GDPR) is a regulation in EU law  
2711 on data protection and privacy for all individuals within the European Union (EU) and  
2712 the European Economic Area (EEA). It also addresses the export of personal data  
2713 outside the EU and EEA areas.

**2714 12. GNSO - Generic Names Supporting Organization**

2716 The supporting organization responsible for developing and recommending to the  
2717 ICANN Board substantive policies relating to generic top-level domains. Its members  
2718 include representatives from gTLD registries, gTLD registrars, intellectual property  
2719 interests, Internet service providers, businesses and non-commercial interests.

**2720 13. Generic Top Level Domain (gTLD)**

2721 "gTLD" or "gTLDs" refers to the top-level domain(s) of the DNS delegated by ICANN  
2722 pursuant to a registry agreement that is in full force and effect, other than any country  
2723 code TLD (ccTLD) or internationalized domain name (IDN) country code TLD.

**2724 14. gTLD Registries Stakeholder Group (RySG)**

2725 The gTLD Registries Stakeholder Group (RySG) is a recognized entity within the Generic  
2726 Names Supporting Organization (GNSO) formed according to Article X, Section 5  
2727 (September 2009) of the Internet Corporation for Assigned Names and Numbers  
2728 (ICANN) Bylaws.

2730 The primary role of the RySG is to represent the interests of gTLD registry operators (or  
2731 sponsors in the case of sponsored gTLDs) ("Registries") (i) that are currently under  
2732 contract with ICANN to provide gTLD registry services in support of one or more gTLDs;  
2733 (ii) who agree to be bound by consensus policies in that contract; and (iii) who  
2734 voluntarily choose to be members of the RySG. The RySG may include Interest Groups  
2735 as defined by Article IV. The RySG represents the views of the RySG to the GNSO  
2736 Council and the ICANN Board of Directors with particular emphasis on ICANN  
2737 consensus policies that relate to interoperability, technical reliability and stable  
2738 operation of the Internet or domain name system.

**2739 15. ICANN - The Internet Corporation for Assigned Names and Numbers**

2741 The Internet Corporation for Assigned Names and Numbers (ICANN) is an  
2742 internationally organized, non-profit corporation that has responsibility for Internet  
2743 Protocol (IP) address space allocation, protocol identifier assignment, generic (gTLD)  
2744 and country code (ccTLD) Top-Level Domain name system management, and root  
2745 server system management functions. Originally, the Internet Assigned Numbers  
2746 Authority (IANA) and other entities performed these services under U.S. Government  
2747 contract. ICANN now performs the IANA function. As a private-public partnership,  
2748 ICANN is dedicated to preserving the operational stability of the Internet; to promoting  
2749 competition; to achieving broad representation of global Internet communities; and to

2750 developing policy appropriate to its mission through bottom-up, consensus-based  
2751 processes.

2752 **16. Intellectual Property Constituency (IPC)**

2753 The Intellectual Property Constituency (IPC) represents the views and interests of the  
2754 intellectual property community worldwide at ICANN, with a particular emphasis on  
2755 trademark, copyright, and related intellectual property rights and their effect and  
2756 interaction with Domain Name Systems (DNS). The IPC is one of the constituency  
2757 groups of the Generic Names Supporting Organization (GNSO) charged with the  
2758 responsibility of advising the ICANN Board on policy issues relating to the management  
2759 of the domain name system.

2760

2761 **17. Internet Service Provider and Connectivity Provider Constituency (ISPCP)**

2762 The ISPs and Connectivity Providers Constituency is a constituency within the GNSO.  
2763 The Constituency's goal is to fulfill roles and responsibilities that are created by  
2764 relevant ICANN and GNSO bylaws, rules or policies as ICANN proceeds to conclude its  
2765 organization activities. The ISPCP ensures that the views of Internet Service Providers  
2766 and Connectivity Providers contribute toward fulfilling the aims and goals of ICANN.

2767

2768 **18. Name Server**

2769 A Name Server is a DNS component that stores information about one zone (or more)  
2770 of the DNS name space.

2771 **19. Non Commercial Stakeholder Group (NCSG)**

2772 The Non Commercial Stakeholder Group (NCSG) is a Stakeholder Group within the  
2773 GNSO. The purpose of the Non Commercial Stakeholder Group (NCSG) is to represent,  
2774 through its elected representatives and its Constituencies, the interests and concerns  
2775 of noncommercial registrants and noncommercial Internet users of generic Top-level  
2776 Domains (gTLDs). It provides a voice and representation in ICANN processes to:  
2777 non-profit organizations that serve noncommercial interests; nonprofit services such as  
2778 education, philanthropies, consumer protection, community organizing, promotion of  
2779 the arts, public interest policy advocacy, children's welfare, religion, scientific research,  
2780 and human rights; public interest software concerns; families or individuals who  
2781 register domain names for noncommercial personal use; and Internet users who are  
2782 primarily concerned with the noncommercial, public interest aspects of domain name  
2783 policy.

2784

2785 **20. Post Delegation Dispute Resolution Procedures (PDDRs)**

2786 Post-Delegation Dispute Resolution Procedures have been developed to provide those  
2787 harmed by a new gTLD Registry Operator's conduct an alternative avenue to complain  
2788 about that conduct. All such dispute resolution procedures are handled by providers  
2789 external to ICANN and require that complainants take specific steps to address their  
2790 issues before filing a formal complaint. An Expert Panel will determine whether a  
2791 Registry Operator is at fault and recommend remedies to ICANN.

2792

**21. Registered Name**

2793 "Registered Name" refers to a domain name within the domain of a gTLD, whether  
2794 consisting of two (2) or more (e.g., john.smith.name) levels, about which a gTLD  
2795 Registry Operator (or an Affiliate or subcontractor thereof engaged in providing  
2796 Registry Services) maintains data in a Registry Database, arranges for such  
2797 maintenance, or derives revenue from such maintenance. A name in a Registry  
2798 Database may be a Registered Name even though it does not appear in a zone file (e.g.,  
2799 a registered but inactive name).

**25. Registration Data Directory Service (RDDS)**

Domain Name Registration Data Directory Service or RDDS refers to the service(s)  
offered by registries and registrars to provide access to Domain Name Registration  
Data.

**26. Registration Restrictions Dispute Resolution Procedure (RRDRP)**

The Registration Restrictions Dispute Resolution Procedure (RRDRP) is intended to  
address circumstances in which a community-based New gTLD Registry Operator  
deviates from the registration restrictions outlined in its Registry Agreement.

**27. SO - Supporting Organizations**

The SOs are the three specialized advisory bodies that advise the ICANN Board of  
Directors on issues relating to domain names (GNSO and CCNSO) and, IP addresses  
(ASO).

**2835 28. SSAC - Security and Stability Advisory Committee**

2836 An advisory committee to the ICANN Board comprised of technical experts from  
2837 industry and academia as well as operators of Internet root servers, registrars and TLD  
2838 registries.

**2839 29. TLD - Top-level Domain**

2840 TLDs are the names at the top of the DNS naming hierarchy. They appear in domain  
2841 names as the string of letters following the last (rightmost) ".", such as "net" in  
2842 <http://www.example.net>. The administrator for a TLD controls what second-level  
2843 names are recognized in that TLD. The administrators of the "root domain" or "root  
2844 zone" control what TLDs are recognized by the DNS. Commonly used TLDs include  
2845 .COM, .NET, .EDU, .JP, .DE, etc.

**2846 30. Uniform Dispute Resolution Policy (UDRP)**

2847 The Uniform Dispute Resolution Policy (UDRP) is a rights protection mechanism that  
2848 specifies the procedures and rules that are applied by registrars in connection with  
2849 disputes that arise over the registration and use of gTLD domain names. The UDRP  
2850 provides a mandatory administrative procedure primarily to resolve claims of abusive,  
2851 bad faith domain name registration. It applies only to disputes between registrants and  
2852 third parties, not disputes between a registrar and its customer.

2853

**2854 31. Uniform Rapid Suspension (URS)**

2855 The Uniform Rapid Suspension System is a rights protection mechanism that  
2856 complements the existing Uniform Domain-Name Dispute Resolution Policy (UDRP) by  
2857 offering a lower-cost, faster path to relief for rights holders experiencing the most  
2858 clear-cut cases of infringement.

2859

**2860 32. WHOIS**

2861 WHOIS protocol is an Internet protocol that is used to query databases to obtain  
2862 information about the registration of a domain name (or IP address). The WHOIS  
2863 protocol was originally specified in RFC 954, published in 1985. The current  
2864 specification is documented in RFC 3912. ICANN's gTLD agreements require registries  
2865 and registrars to offer an interactive web page and a port 43 WHOIS service providing  
2866 free public access to data on registered names. Such data is commonly referred to as  
2867 "WHOIS data," and includes elements such as the domain registration creation and  
2868 expiration dates, nameservers, and contact information for the registrant and  
2869 designated administrative and technical contacts.

2870

2871 WHOIS services are typically used to identify domain holders for business purposes and  
2872 to identify parties who are able to correct technical problems associated with the  
2873 registered domain.

2874

2875 **Annex A – System for Standardized**  
2876 **Access/Disclosure to Non-public Registration Data –**  
2877 **Background Info**

2878

**ISSUE DESCRIPTION AND/OR CHARTER QUESTIONS**

2879 From the EPDP Team Charter:

2880 (a) Purposes for Accessing Data – What are the unanswered policy questions that will  
2881 guide implementation?2882 a1) Under applicable law, what are legitimate purposes for third parties to  
2883 access registration data?

2884 a2) What legal bases exist to support this access?

2885 a3) What are the eligibility criteria for access to non-public Registration data?

2886 a4) Do those parties/groups consist of different types of third-party  
2887 Requestors?2888 a5) What data elements should each user/party have access to based on their  
2889 purposes?2890 a6) To what extent can we determine a set of data elements and potential  
2891 scope (volume) for specific third parties and/or purposes?2892 a7) How can RDAP, that is technically capable, allow Registries/Registrars to  
2893 accept accreditation tokens and purpose for the query? Once accreditation  
2894 models are developed by the appropriate accreditors and approved by the  
2895 relevant legal authorities, how can we ensure that RDAP is technically capable  
2896 and is ready to accept, log and respond to the accredited Requestor's token?

2897

2898 (b) Credentialing – What are the unanswered policy questions that will guide  
2899 implementation?

2900 b1) How will credentials be granted and managed?

2901 b2) Who is responsible for providing credentials?

2902 b3) How will these credentials be integrated into registrars'/registries' technical  
2903 systems?

2904

2905 (c) Terms of access and compliance with terms of use – What are the unanswered  
2906 policy questions that will guide implementation?

2907 c1) What rules/policies will govern users' access to the data?

2908 c2) What rules/policies will govern users' use of the data once accessed?

2909 c3) Who will be responsible for establishing and enforcing these rules/policies?

2910 c4) What, if any, sanctions or penalties will a user face for abusing the data,  
2911 including future restrictions on access or compensation to data subjects whose

2912 data has been abused in addition to any sanctions already provided in  
2913 applicable law?  
2914 c5) What kinds of insights will Contracted Parties have into what data is  
2915 accessed and how it is used?  
2916 c6) What rights do data subjects have in ascertaining when and how their data  
2917 is accessed and used?  
2918 c7) How can a third party access model accommodate differing requirements  
2919 for data subject notification of data disclosure?  
2920

2921 From the Annex to the Temporary Specification:  
2922

- 2923 ● Developing methods to provide potential URS and UDRP complainants with  
2924 sufficient access to Registration Data to support good-faith filings of complaints
- 2925 ● Limitations in terms of query volume envisaged under an accreditation program  
2926 balanced against realistic investigatory cross-referencing needs.
- 2927 ● Confidentiality of queries for Registration Data by law enforcement authorities
- 2928 ● Pursuant to Section 4.4, continuing community work to develop an  
2929 accreditation and access model that complies with GDPR, while recognizing the  
2930 need to obtain additional guidance from Article 29 Working Party/European  
2931 Data Protection Board.
- 2932 ● Consistent process for continued access to Registration Data, including non-  
2933 public data, for users with a legitimate purpose, until the time when a final  
2934 accreditation and access mechanism is fully operational, on a mandatory basis  
2935 for all contracted parties.

2936  
2937 From EPDP Team Phase 1 Final Report:  
2938

2939 EPDP Team Recommendation #3.

2940 In accordance with the EPDP Team Charter and in line with Purpose #2, the EPDP Team  
2941 undertakes to make a recommendation pertaining to a standardised model for lawful  
2942 disclosure of non-public Registration Data (referred to in the Charter as 'Standardised  
2943 Access') now that the gating questions in the charter have been answered. This will  
2944 include addressing questions such as:

- 2945
- 2946 ● Whether such a system should be adopted
- 2947 ● What are the legitimate purposes for third parties to access registration data?
- 2948 ● What are the eligibility criteria for access to non-public Registration data?
- 2949 ● Do those parties/groups consist of different types of third-party Requestors?
- 2950 ● What data elements should each user/party have access to?

2951  
2952 In this context, the EPDP team will consider amongst other issues, disclosure in the  
2953 course of intellectual property infringement and DNS abuse cases. There is a need to  
2954 confirm that disclosure for legitimate purposes is not incompatible with the purposes  
2955 for which such data has been collected.

2956  
2957 TSG Policy Questions

- 2958
- 2959 1. Result from the EPDP, or other policy initiatives, regarding access to non-public
  - 2960 gTLD domain name registration data.
  - 2961 2. Identify and select Identity Providers (if that choice is made) that can grant
  - 2962 credentials for use in the system.<sup>56</sup>
  - 2963 3. Describe the general qualifications of a Requestor that is authorized to access
  - 2964 non-public gTLD domain name registration data, such as which sorts of
  - 2965 Requestors get access to which fields of non-public gTLD domain name
  - 2966 registration data (“the authorization policy”).
  - 2967 4. Detail whether a particular category of Requestors or Requestors in general, can
  - 2968 download logs of their activity.
  - 2969 5. Describe data retention requirements imposed on each component of the
  - 2970 system.
  - 2971 6. Describe service Level Requirements (SLRs) for each component of the system,
  - 2972 including whether those SLRs and evaluations of component operators against
  - 2973 them are made public, and for handling complaints about access.
  - 2974 7. Specify legitimate causes for denying a request.
  - 2975 8. Outline support for correlation via a pseudonymity query as described in
  - 2976 Section 7.2.
  - 2977 9. Outline the selection of an actor model as described in Section 8 and the
  - 2978 appropriate supported components and service discovery as described in
  - 2979 Sections 10.1 through 10.5.
  - 2980 10. Describe the conditions, if any, under which requests would be disclosed to CPs.
  - 2981 11. Provide legal analysis regarding liability of the operators of various components
  - 2982 of the system.
  - 2983 12. Outline a procedure for fielding complaints about inappropriate disclosures and,
  - 2984 accordingly, an Acceptable Use Policy.
  - 2985

**EXPECTED DELIVERABLE**

---

2986 Policy recommendations for a standardised model for lawful disclosure/access of non-  
2987 public Registration Data  
2988

**GENERAL REQUIRED READING**

**BRIEFINGS TO BE PROVIDED**

---

Topic	Possible presenters	Important because
RDAP – Q & A session post review of ICANN 65 sessions	Francisco Arias, ICANN Org	Ensure a common understanding of the workings and abilities of RDAP

**DEPENDENCIES**

Describe dependency	Dependent on	Expected or recommended timing
The negotiation and finalization of the data protection agreements required according to phase 1 report are a prerequisite for much of work in phase 2 (suggested by ISPCP)	CPs/ICANN Org	

2990

**PROPOSED TIMING AND APPROACH**

2991 **Introduction**  
 2992 Objective of EPDP Team is to develop and agree on policy recommendations for sharing  
 2993 of non-public Registration Data<sup>57</sup> with requesting parties (System for Standardized  
 2994 Access/Disclosure of Non-Public Registration Data).  
 2995  
 2996 Until legal assurances satisfactory to relevant parties are provided, the development of  
 2997 the policy recommendations for a System for Standardized Disclosure/Access will be  
 2998 agnostic to the modalities of the System.  
 2999

<sup>57</sup> From the EPDP Phase 1 Final Report: “Registration Data” will mean the data elements identified in Annex D [of the EPDP Phase 1 Final Report], collected from a natural and legal person in connection with a domain name registration.

3000 In parallel, the EPDP Team as a whole should engage with ICANN Org on the  
3001 development of policy questions that will help inform the discussions with DPAs which  
3002 have as its objective to determine what model of System for Standardized Disclosure  
3003 would be fully compliant with GDPR, workable and address/alleviate the legal liability  
3004 of contracted parties.

3005  
3006 Non-exhaustive list of topics expected to be addressed:  
3007

- 3008 ● Terminology and Working Definitions
- 3009 ● Legal guidance needed
- 3010 ● Requirements, incl. defining user groups, criteria & criteria/content of request
- 3011 ● Publication of process, criteria and content request required
- 3012 ● Timeline of process
- 3013 ● Receipt of acknowledgment
- 3014 ● Accreditation
- 3015 ● Authentication & Authorization
- 3016 ● Purposes for third party disclosure
- 3017 ● Lawful basis for disclosure
- 3018 ● Acceptable Use Policy
- 3019 ● Terms of use / disclosure agreements, including fulfillment of legal
- 3020 requirements
- 3021 ● Privacy policies
- 3022 ● Query policy
- 3023 ● Retention and destruction of data
- 3024 ● Service level agreements
- 3025 ● Financial sustainability

#### 3026 **Approach**

3027  
3028 Determine at the outset:

- 3029 a) Terminology and working definitions
- 3030 b) Identify legal guidance needed (note, this is also an ongoing activity throughout
- 3031 all the topics).
- 3032
- 3033
- 3034

3035 Possible logical order to address the remaining topics:

- 3036 c) Define user groups, criteria and purposes / lawful basis per user group
- 3037 ↓
- 3038 d) Authentication / authorization / accreditation of user groups
- 3039 ↓
- 3040 e) Criteria/content of requests per user group
- 3041

3083 **a) Topic: Terminology and Working Definitions**

3084

3085 Objective: To ensure that the same meaning is associated with the terms used in the  
3086 context of this discussion and avoid confusion, the EPDP Team is to agree on a set of  
3087 working definitions. It is understood that these working definitions merely serve to  
3088 clarify terminology used, it is in no way intended to restrict the scope of work or  
3089 predetermine the outcome. It is understood that these working definitions will need to  
3090 be reviewed and revised, as needed, at the end of the process.

3091

3092 Materials to review:

- 3093 ● Terminology used in GDPR and other data protection legislation
- 3094 ● [Final Report on the Privacy & Proxy Services Accreditation Issues](#) (7 December  
3095 2015) - eDefinitions - pages 6-8

3096

3097 Related mind map question: None

3098

3099 Related EPDP Phase 1 Implementation: To be confirmed - recommendation #18  
3100 implementation may include definitions that may need to be factored into the EPDP  
3101 Team's phase 2 deliberations.

3102

3103 Tasks:

- 3104 ● Confirm whether any definitions are expected to be developed or applied in the  
3105 implementation of recommendation #18 (Staff)
- 3106 ● Develop first draft of working definitions. (Staff)
- 3107 ● EPDP Team to review and provide input (EPDP)
- 3108 ● Obtain agreement on base set of definitions (EPDP)
- 3109 ● Maintain working document of definitions through deliberations (All)

3110

3111 Target date for completion: 30 May 2019

3112

3113

3114 **b) Topic: Legal Questions**

3115

3116 Objective: identify legal questions that are essential to help inform the EPDP Team  
3117 deliberations on this topic.

3118

3119 Questions submitted to date:

3120

Question	Status	Owner
<p>1. There is a need to confirm that disclosure for legitimate purposes is not incompatible with the purposes for which such data has been collected.</p>	<p><b>ON HOLD</b></p> <p>The Phase 2 LC has noted this question as premature at this time and will mark the question as “on hold”. The question will be revisited once the EPDP Team has identified the purposes for disclosure.</p>	
<p>2. Answer the controllership and legal basis question for a system for Standardized Access to Non-Public Registration Data, assuming a technical framework consistent with the TSG, and in a way that sufficiently addresses issues related to liability and risk mitigation with the goal of decreasing liability risks to Contracted Parties through the adoption of a system for Standardized Access (IPC)</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	
<p>3. Legal guidance should be sought on the possibility of an accreditation-based disclosure system as such. (ISPCP)</p>	<p><b>ON HOLD</b></p> <p>The Phase 2 LC has noted this question as premature at this time and will mark the question as “on</p>	

	<p>hold". The question will be revisited once the EPDP Team has identified the purposes for disclosure.</p>	
<p>4. The question of disclosure to non-EU law enforcement based on Art 6 f GDPR should be presented to legal counsel. (ISPCP)</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of seeking further guidance from the author of this question, and, upon review of the guidance and/or updated text, will determine if the question should be forwarded to outside counsel.</p>	
<p>5. Can a centralized access/disclosure model (one in which a single entity is responsible for receiving disclosure requests, conducting the balancing test, checking accreditation, responding to requests, etc.) be designed in such a way as to limit the liability for the contracted parties to the greatest extent possible? IE - can it be opined that the centralized entity can be largely (if not entirely) responsible for the liability associated with disclosure (including the accreditation and authorization) and could the contracted parties' liability be limited to activities strictly associated with other processing not related to disclosure, such as the collection and secure transfer of data? If so, what needs to be considered/articulated in policy to accommodate this? (ISPCP)</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	

<p>6. Within the context of an SSAD, in addition to determining its own lawful basis for disclosing data, does the requestee (entity that houses the requested data) need to assess the lawful basis of the third party Requestor? (Question from ICANN65 from GAC/IPC)</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	
<p>7. To what extent, if any, are contracted parties accountable when a third party misrepresents their intended processing, and how can this accountability be reduced? (BC)</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	
<p>8. BC Proposes that the EPDP split Purpose 2 into two separate purposes:</p> <ul style="list-style-type: none"> <li>• Enabling ICANN to maintain the security, stability, and resiliency of the Domain Name System in accordance with ICANN’s mission and Bylaws though the controlling and processing of gTLD registration data.</li> <li>• Enabling third parties to address consumer protection, cybersecurity, intellectual property, cybercrime, and DNS abuse involving the use or registration of domain names. counsel be consulted to determine if the restated purpose 2 (as stated above)</li> </ul> <p>Can legal counsel be consulted to determine if the restated purpose 2 (as stated above) is possible under GDPR? If the above language is not possible, are there suggestions that</p>	<p><b>ON HOLD</b></p> <p>The Phase 2 LC has noted this question as premature at this time and will mark the question as “on hold”. The question will be revisited once the GNSO Council and Board consultations re: Recommendation 1, Purpose 2 have been completed.</p>	

<p>counsel can make to improve this language? (BC)</p>		
<p>9. Can legal analysis be provided on how the balancing test under 6(1)(f) is to be conducted, and under which circumstances 6(1)(f) might require a manual review of a request? (BC)</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	
<p>10. If not all requests benefit from manual review, is there a legal methodology to define categories of requests (e.g. rapid response to a malware attack or contacting a non-responsive IP infringer) which can be structured to reduce the need for manual review? (BC)</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	
<p>11. Can legal counsel be consulted to determine whether GDPR prevents higher volume access for properly credentialed cybersecurity professionals, who have agreed on appropriate safeguards? If such access is not prohibited, can counsel provide examples of safeguards (such as pseudonymization) that should be considered? (BC)</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	
<p>12. To identify 6(1)(b) as purpose for processing registration data, we should follow up on the B &amp; B advice that- "it will be</p>	<p><b>REWORK</b></p>	

<p>necessary to require that the specific third party or at least the processing by the third party is, at least abstractly, already known to the data subject at the time the contract is concluded and that the controller, as the contractual partner, informs the data subject of this prior to the transfer to the third party”</p> <p>B&amp;B should clarify why it believes that the only basis for providing WHOIS is for the prevention of DNS abuse. Its conclusion in Paragraph 10 does not consider the other purposes identified by the EPDP in Rec 1, and, in any event should consider the recent EC recognition that ICANN has a broad purpose to:</p> <p>‘contribute to the maintenance of the security, stability, and resiliency of the Domain Name System in accordance with ICANN's mission’, which is at the core of the role of ICANN as the “guardian” of the Domain Name System.”</p>	<p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	
<p>13. B&amp;B should advise on the extent to which GDPR’s public interest basis 6(1)e is applicable, in light of the EC’s recognition that:</p> <p>“With regard to the formulation of purpose two, the European Commission acknowledges ICANN’s central role and responsibility for ensuring the security, stability and resilience of the Internet Domain Name System and that in doing so it acts in the public interest.”</p>	<p><b>REWORK</b></p> <p>The Phase 2 LC is in the process of rewording this question, and, upon review of the updated text, will determine if the question should be forwarded to outside counsel.</p>	

- 3121
- 3122 Tasks:
- 3123 - Determine priority questions for phase 2 related topics
- 3124 - Agree on approach and approval process for questions that emerge throughout
- 3125 deliberations
- 3126
- 3127 Target date for completion: Ongoing
- 3128

3129 **c) Topic: Define user groups, criteria and purposes / lawful basis per user group**

3130

3131 Objective:

- 3132 • Define the categories of user groups that may request disclosure of / access to  
3133 non-public registration data as well as the criteria that should be applied to  
3134 determine whether an individual or entity belongs to this category.
- 3135 • Determine purposes and lawful basis per user group for processing data
- 3136 • Determine if and how the Phase 2 standardized framework can accommodate  
3137 requests unique to large footprint groups. Consider if those not fitting in any of  
3138 the user groups identified may still request disclosure/access through  
3139 implementation of recommendation #18 or other means.

3140

3141 Related mind map questions:

3142

3143 *P1-Charter-a*

3144 (a) Purposes for Accessing Data – What are the unanswered policy questions that will  
3145 guide implementation?

3146 a1) Under applicable law, what are legitimate purposes for third parties to  
3147 access registration data?

3148 a2) What legal bases exist to support this access?

3149 a3) What are the eligibility criteria for access to non-public Registration data?

3150 a4) Do those parties/groups consist of different types of third-party  
3151 Requestors?

3152

3153 *Annex to the Temporary Specification:*

3154 3. Developing methods to provide potential URS and UDRP complainants with sufficient  
3155 access to Registration Data to support good-faith filings of complaints.

3156

3157 *Phase 1 Recommendations*

3158 EPDP Team Rec #3

- 3159 • What are the legitimate purposes for third parties to access registration data?
- 3160 • What are the eligibility criteria for access to non-public Registration data?
- 3161 • Do those parties/groups consist of different types of third-party Requestors?

3162

3163 The EPDP Team requests that when the EPDP Team commences its deliberations on a  
3164 standardized access framework, a representative of the RPMs PDP WG shall provide an  
3165 update on the current status of deliberations so that the EPDP Team may determine  
3166 if/how the WG's recommendations may affect consideration of the URS and UDRP in  
3167 the context of the standardized access framework deliberations.

3168

3169 Note that Purpose 2 is a placeholder pending further work on the issue of access in  
3170 Phase 2 of this EPDP and is expected to be revisited once this Phase 2 work has been  
3171 completed. [staff note - linked to purposes but timing to revisit purpose 2 is once phase  
3172 2 work has been completed]

3173  
 3174 *TSG-Final-Q#3*  
 3175 3. Describe the general qualifications of a Requestor that is authorized to access non-  
 3176 public gTLD domain name registration data, such as which sorts of Requestors get  
 3177 access to which fields of non-public gTLD domain name registration data (“the  
 3178 authorization policy”).

3183 Related EPDP Phase 1 Implementation:

3184 None expected

3185

3186 Tasks:

- 3187 - Develop first list of categories of Requestors based on source materials. (Staff)
- 3188 - Review list of categories of Requestors and determine eligibility criteria. (All)
- 3189 - Develop abuse types and scenarios to formulate use cases that determine requirements for each Requestor
- 3190 - Determine purposes and legal basis per user group for processing data (All)
- 3191 - Determine if and how the Phase 2 standardized framework can accommodate requests unique to large footprint groups. Consider if those not fitting in any of the user groups identified may still request disclosure/access through implementation of recommendation #18 or other means. (All)
- 3192 - Determine if and how the Phase 2 standardized framework can accommodate requests unique to large footprint groups. Consider if those not fitting in any of the user groups identified may still request disclosure/access through implementation of recommendation #18 or other means. (All)
- 3193 - Determine if and how the Phase 2 standardized framework can accommodate requests unique to large footprint groups. Consider if those not fitting in any of the user groups identified may still request disclosure/access through implementation of recommendation #18 or other means. (All)
- 3194 - Determine if and how the Phase 2 standardized framework can accommodate requests unique to large footprint groups. Consider if those not fitting in any of the user groups identified may still request disclosure/access through implementation of recommendation #18 or other means. (All)
- 3195 - Determine if and how the Phase 2 standardized framework can accommodate requests unique to large footprint groups. Consider if those not fitting in any of the user groups identified may still request disclosure/access through implementation of recommendation #18 or other means. (All)
- 3196 - Confirm all charter questions have been addressed and documented.

3197

3198 Target date for completion: 13 June 2019

3199 (Revisit purpose 2 - once phase 2 work has been completed)

3200

3201

**d) Authentication / authorization / accreditation of user groups**

3202

3203

3204

**Objective:**

3205

- Establish if authentication, authorization and/or accreditation of user groups should be required

3206

3207

- Can an accreditation model compliment or be used with what is implemented from EPDP-Phase 1 Recommendation #18?

3208

3209

3210

- If so, establish policy principles for authentication, authorization and/or accreditation, including addressing questions such as:

3211

- whether or not an authenticated user requesting access to non-public WHOIS data must provide its legitimate interest for each individual query/request.

3212

3213

3214

- If not, explain why not and what implications this might have on queries from certain user groups, if any.

3215

3216

3217

**Related mind map questions:**

3218

*P1-Charter-a/b*

3219

- (a) Purposes for Accessing Data - What are the unanswered policy questions that will guide implementation?

3220

3221

- a7) How can RDAP, that is technically capable, allow Registries/Registrars to accept accreditation tokens and purpose for the query? Once accreditation models are developed by the appropriate accreditors and approved by the relevant legal authorities, how can we ensure that RDAP is technically capable and is ready to accept, log and respond to the accredited Requestor's token?

3222

3223

3224

3225

3226

- (b) Credentialing – What are the unanswered policy questions that will guide implementation?

3227

3228

- b1) How will credentials be granted and managed?

3229

- b2) Who is responsible for providing credentials?

3230

- b3) How will these credentials be integrated into registrars'/registries' technical systems?

3231

3232

3233

*Annex to the Temporary Specification*

3234

1. Pursuant to Section 4.4, continuing community work to develop an accreditation and access model that complies with GDPR, while recognizing the need to obtain additional guidance from Article 29 Working Party/European Data Protection Board.

3235

3236

3237

3238

3239

*TSG-Final-Q#2*

3240

- Identify and select Identity Providers (if that choice is made) that can grant credentials for use in the system.

Related EPDP Phase 1 Implementation:

Recommendation #18:

- Requirements for what information responses should include. Responses where disclosure of data (in whole or in part) has been denied should include: rationale sufficient for the Requestor to understand the reasons for the decision, including, for example, an analysis and explanation of how the balancing test was applied (if applicable).
- Logs of Requests, Acknowledgements and Responses should be maintained in accordance with standard business recordation practices so that they are available to be produced as needed including, but not limited to, for audit purposes by ICANN Compliance;
- Response time for a response to the Requestor will occur without undue delay, but within maximum of 30 days unless there are exceptional circumstances. Such circumstances may include the overall number of requests received. The contracted parties will report the number of requests received to ICANN on a regular basis so that the reasonableness can be assessed.
- A separate timeline of [less than X business days] will considered for the response to 'Urgent' Reasonable Disclosure Requests, those Requests for which evidence is supplied to show an immediate need for disclosure [time frame to be finalized and criteria set for Urgent requests during implementation].

Tasks:

- Confirm definitions of key terms
- Determine full list of policy questions and deliberate each
- Determine possible solutions or proposed recommendation, if any
- Confirm all charter questions have been addressed and documented

Target date for completion: August

**i) Acceptable Use Policy**

Objective: Define the policy requirements around:

- 3450 1. How should a code of conduct (if any) be developed, continuously evolve  
 3451 and be enforced?  
 3452 2. If ICANN and its contracted parties develop a code of conduct for third  
 3453 parties with legitimate interest, what features and needs should be considered?  
 3454 3. Are there additional data flows that must be documented outside of what  
 3455 was documented in Phase 1?  
 3456 Can a Code of Conduct model compliment or be used with what is implemented  
 3457 from EPDP-Phase 1 Recommendation #18?  
 3458

3478

3479 Related EPDP Phase 1 Implementation: None.

3480

3481 Tasks:

- 3482 ● Determine full list of policy questions and deliberate each
- 3483 ● Determine possible solutions or proposed recommendation, if any
- 3484 ● Confirm all charter questions have been addressed and documented

3485

3486 Target date for completion: August

3487

3488 **j) Terms of use / disclosure agreements / privacy policies**

3489

3490 Objective: Define policy requirements around terms of use for third parties who seek to access nonpublic registration data:

3491

- 3492
- 3493 ● At a minimum, what required measures are needed to adequately
- 3494 safeguard personal data that may be made available to an accredited
- 3495 user/third party?
- 3496 ● What procedures should be established for accessing data?
- 3497 ● What procedures should be established for limiting the use of data that
- 3498 is properly accessed?
- 3499 ● Should separate Terms of Use be required for different user groups?
- 3500 ● Who would monitor and enforce compliance with Terms of Use?

- 3501 • What mechanism would be used to require compliance with the Terms  
3502 of Use?

3503  
3504 Related mind map questions:

3505  
3506 *P1-Charter-c*

- 3507 c1) What rules/policies will govern users' access to the data?
- 3508 c2) What rules/policies will govern users' use of the data once accessed?
- 3509 c3) Who will be responsible for establishing and enforcing these rules/policies?
- 3510 c4) What, if any, sanctions or penalties will a user face for abusing the data, including  
3511 future  
3512 restrictions on access or compensation to data subjects whose data has been abused in  
3513 addition to any sanctions already provided in applicable law?

3514  
3515 *TSG-Final-Q#4*

3516 Detail whether a particular category of Requestors or Requestors in general, can  
3517 download logs of their activity.

3518 *TSG-Final-Q#10*

3519 Describe the conditions, if any, under which requests would be disclosed to CPs.

3520 *TSG-Final-Q#11*

3521 Provide legal analysis regarding liability of the operators of various components of the  
3522 system.

3523 *TSG-Final-Q#12*

3524 Outline a procedure for fielding complaints about inappropriate disclosures and,  
3525 accordingly, an Acceptable Use Policy

Data retention in the TSG model	<a href="https://www.icann.org/en/system/files/files/technical-model-access-non-public-registration-data-30apr19-en.pdf">https://www.icann.org/en/system/files/files/technical-model-access-non-public-registration-data-30apr19-en.pdf</a> page 26	

3557  
 3558 Related EPDP Phase 1 Implementation: Recommendation #15:  
 3559 1. In order to inform its Phase 2 deliberations, the EPDP team recommends that ICANN  
 3560 Org, as a matter of urgency, undertakes a review of all of its active processes and

3561 procedures so as to identify and document the instances in which personal data is  
3562 requested from a registrar beyond the period of the 'life of the registration'. Retention  
3563 periods for specific data elements should then be identified, documented, and relied  
3564 upon to establish the required relevant  
3565 and specific minimum data retention expectations for registrars. The EPDP Team  
3566 recommends community members be invited to contribute to this data gathering  
3567 exercise by providing input on other legitimate purposes for which different retention  
3568 periods may be applicable.

3569  
3570 2. In the interim, the EPDP team has recognized that the Transfer Dispute Resolution  
3571 Policy ("TDRP") has been identified as having the longest justified retention period of  
3572 one year and has therefore recommended registrars be required to retain only those  
3573 data elements deemed necessary for the purposes of the TDRP, for a period of fifteen  
3574 months following the life of the registration plus three months to implement the  
3575 deletion, i.e., 18 months. This retention is grounded on the stated policy stipulation  
3576 within the TDRP that claims under the policy may only be raised for a period of 12  
3577 months after the alleged breach (FN: see TDRP section 2.2) of the Transfer Policy (FN:  
3578 see Section 1.15 of TDRP). This retention period does not restrict the ability of  
3579 registries and registrars to retain data elements provided in Recommendations 4 -7 for  
3580 other purposes specified in Recommendation 1 for shorter periods.

3581  
3582 3. The EPDP team recognizes that Contracted Parties may have needs or requirements  
3583 for different retention periods in line with local law or other requirements. The EPDP  
3584 team notes that nothing in this recommendation, or in separate ICANN-mandated  
3585 policy, prohibits contracted parties from setting their own retention periods, which  
3586 may be longer or shorter than what is specified in ICANN policy.

3587  
3588 4. The EPDP team recommends that ICANN Org review its current data retention  
3589 waiver procedure to improve efficiency, request response times, and GDPR  
3590 compliance, e.g., if a Registrar from a certain jurisdiction is successfully granted a data  
3591 retention waiver, similarly-situated Registrars might apply the same waiver through a  
3592 notice procedure and without having to produce a separate application.

3593  
3594 Tasks:

- 3595 ● Confirm definitions of key terms
- 3596 ● Determine full list of policy questions and deliberate each
- 3597 ● Determine possible solutions or proposed recommendation, if any
- 3598 ● Confirm all charter questions have been addressed and documented

3599  
3600 Target date for completion: September

3601  
3602

3603 **I) Financial sustainability**

3604

3605 Objective: Ensure that all aspects of SSAD are financially sustainable. Consider how and  
 3606 by whom costs of SSAD implementation and management are borne.

- 3607 ● Determine if market inefficiencies existed prior to May 2018 and if any exist in a  
 3608 post EPDP-Phase 1 implemented world.
- 3609 ● Should contracted parties and or ICANN bear the cost of a standardized  
 3610 solution, even if the disclosure of registration data is considered in the public  
 3611 interest?
- 3612 ● If accreditation is a viable solution, should there be application fees associated,  
 3613 or should a fee structure be based on the type (tiered), size, or quantify of  
 3614 disclosures?
- 3615 ● Should or could data subjects be compensated for disclosures of their data?

3616

3632

## 3633 Annex B – General Background

### 3634 Process & Issue Background

3635  
3636 On 19 July 2018, the GNSO Council [initiated](#) an Expedited Policy Development Process  
3637 (EPDP) and [chartered](#) the EPDP on the Temporary Specification for gTLD Registration  
3638 Data Team. Unlike other GNSO PDP efforts, which are open for anyone to join, the  
3639 GNSO Council chose to limit the membership composition of this EPDP, primarily in  
3640 recognition of the need to complete the work in a relatively short timeframe and to  
3641 resource the effort responsibly. GNSO Stakeholder Groups, the Governmental Advisory  
3642 Committee (GAC), the Country Code Supporting Organization (ccNSO), the At-Large  
3643 Advisory Committee (ALAC), the Root Server System Advisory Committee (RSSAC) and  
3644 the Security and Stability Advisory Committee (SSAC) were each been invited to  
3645 appoint up to a set number of members and alternates, as outlined in the [charter](#). In  
3646 addition, the ICANN Board and ICANN Org have been invited to assign a limited number  
3647 of liaisons to this effort. A call for volunteers to the aforementioned groups was issued  
3648 in July, and the EPDP Team held its first phase 1 meeting on [1 August 2018](#).

#### 3649 ○ Issue Background

3650  
3651 On 17 May 2018, the ICANN Board approved the Temporary Specification for gTLD  
3652 Registration Data. The Board took this action to establish temporary requirements for  
3653 how ICANN and its contracted parties would continue to comply with existing ICANN  
3654 contractual requirements and community-developed policies relate to WHOIS, while  
3655 also complying with the European Union (EU)'s General Data Protection Regulation  
3656 (GDPR). The Temporary Specification has been adopted under the procedure for  
3657 Temporary Policies outlined in the Registry Agreement (RA) and Registrar Accreditation  
3658 Agreement (RAA). Following adoption of the Temporary Specification, the Board "shall  
3659 immediately implement the Consensus Policy development process set forth in  
3660 ICANN's Bylaws".<sup>58</sup> This Consensus Policy development process on the Temporary  
3661 Specification would need to be carried out within a one-year period. Additionally, the  
3662 scope includes discussion of a standardized access system to nonpublic registration  
3663 data.

3664  
3665 At its meeting on 19 July 2018, the Generic Names Supporting Organization (GNSO)  
3666 Council initiated an EPDP on the Temporary Specification for gTLD Registration Data  
3667 and adopted the EPDP Team charter. Unlike other GNSO PDP efforts, which are open  
3668 for anyone to join, the GNSO Council chose to limit the membership composition of  
3669 this EPDP, primarily in recognition of the need to complete the work in a relatively  
3670 short timeframe and to resource the effort responsibly. GNSO Stakeholder Groups, the

---

<sup>58</sup> See section 3.1(a) of the Registry Agreement: <https://www.icann.org/resources/unthemed-pages/org-agmt-html-2013-09-12-en>

3671 Governmental Advisory Committee (GAC), the Country Code Supporting Organization  
3672 (ccNSO), the At-Large Advisory Committee (ALAC), the Root Server System Advisory  
3673 Committee (RSSAC) and the Security and Stability Advisory Committee (SSAC) were  
3674 each been invited to appoint up to a set number of members and alternates, as  
3675 outlined in the [charter](#). In addition, the ICANN Board and ICANN Org have been invited  
3676 to assign a limited number of liaisons to this effort.

3677  
3678 The EPDP Team published its Phase 1 Initial Report for [Public Comment](#) on 21  
3679 November 2018. The EPDP Team incorporated public comments into its Phase 1 [Final](#)  
3680 [Report](#), and the GNSO Council voted to adopt all 29 recommendations within the  
3681 EPDP's Phase 1 [Final Report](#) at its meeting on 4 March 2019. On 15 May 2019, the  
3682 ICANN Board [adopted](#) the EPDP Team's Phase 1 Final Report, with the exception of  
3683 parts of two recommendations: 1) Purpose 2 in Recommendation 1 and 2) the option  
3684 to delete data in the Organization field in Recommendation 12. As per the ICANN  
3685 Bylaws, a consultation will take place between the GNSO Council and the ICANN Board  
3686 to discuss the parts of the EPDP Phase 1 recommendations that were not adopted by  
3687 the ICANN Board. At the same time, an Implementation Review Team (IRT), consisting  
3688 of the ICANN organization (ICANN org) and members of the ICANN community, will  
3689 now implement the approved recommendations of the EPDP Team's Phase 1 Final  
3690 Report. For further details on the status of implementation, please see [here](#).

3691  
3692 On 2 May 2019, the EPDP Team begun Phase 2 of its work. The scope for EPDP Phase 2  
3693 includes (i) discussion of a system for standardized access/disclosure to nonpublic  
3694 registration data, (ii) issues noted in the [Annex to the Temporary Specification for gTLD](#)  
3695 [Registration Data](#) ("Important Issues for Further Community Action"), and (iii) issues  
3696 deferred from Phase 1, e.g., legal vs natural persons, redaction of city field, et. al. For  
3697 further details, please see [here](#).

## 3749 Annex E - Community Input

### 3750 E.1. Request for SO/AC/SG/C Input

3751  
3752 According to the GNSO's PDP Manual, an EPDP Team should formally solicit statements  
3753 from each GNSO Stakeholder Group and Constituency at an early stage of its  
3754 deliberations. An EPDP Team is also encouraged to seek the opinion of other ICANN  
3755 Supporting Organizations and Advisory Committees who may have expertise,  
3756 experience or an interest in the issue. As a result, the EPDP Team reached out to all  
3757 ICANN Supporting Organizations and Advisory Committees as well as GNSO  
3758 Stakeholder Groups and Constituencies with a request for input at the start of its  
3759 deliberations on phase 2. In response, statements were received from:

- 3760 ■ The GNSO Business Constituency (BC)
- 3761 ■ The GNSO Non-Commercial Stakeholder Group (NCSG)
- 3762 ■ The Registries Stakeholder Group (RySG)
- 3763 ■ The Registrar Stakeholder Group (RrSG)
- 3764 ■ The Internet Service Providers and Connectivity  
3765 Providers Constituency (ISPCP)

3766  
3767 The full statements can be found here: <https://community.icann.org/x/zlWGBg>.

3768  
3769 All of the input received was added to the [Early Input review tool](#) and considered by  
3770 the EPDP Team.

### 3771 E.2. Public Comment forum on the Initial Report

3772  
3773 On 7 February 2020, the EPDP Team published its [Initial Report for public comment](#). The  
3774 Initial Report outlined the core issues discussed in relation to the proposed System for  
3775 Standardized Access/Disclosure to non-public gTLD registration data ("SSAD") and  
3776 accompanying preliminary recommendations.

3777  
3778 The EPDP Team used a Google form to facilitate review of public comments. Forty-five  
3779 contributions were received from GNSO Stakeholder Groups, Constituencies, ICANN  
3780 Advisory Committees, companies and organizations, in addition to two contributions from  
3781 individuals. The input provided is at:  
3782 [https://docs.google.com/spreadsheets/d/1EBiFCsWfqQnMxEcCaKQYwCccEVdBc9\\_ktPA3PU](https://docs.google.com/spreadsheets/d/1EBiFCsWfqQnMxEcCaKQYwCccEVdBc9_ktPA3PU8nrQk/edit?usp=sharing)  
3783 [8nrQk/edit?usp=sharing](https://docs.google.com/spreadsheets/d/1EBiFCsWfqQnMxEcCaKQYwCccEVdBc9_ktPA3PU8nrQk/edit?usp=sharing).

3784  
3785 To facilitate its review of the public comments, the EPDP Team developed a set of public  
3786 comment review tools (PCRTs) and discussion tables (see

3788 <https://community.icann.org/x/Hi6JBw>). Through online review and plenary sessions, the  
3789 EPDP Team completed its review and assessment of the input provided and agreed on  
3790 changes to made to the recommendations and/or report.

### 3791 E.3. Public Comment on the Addendum

3792  
3793 On 26 March 2020, the EPDP Team published an Addendum to the Initial Report for public  
3794 comment. The Addendum concerns the EPDP Team's preliminary recommendations and/or  
3795 conclusions on the priority 2 items as listed above.

3796  
3797 The EPDP Team used a Google form to facilitate review of public comments. Twenty-eight  
3798 contributions were received from GNSO Stakeholder Groups, Constituencies, ICANN  
3799 Advisory Committees, companies and organizations, in addition to one contribution from an  
3800 individual. The input provided is at:

3801 [https://docs.google.com/spreadsheets/d/1jN5ThNtmcVJ8txdAGw0ynI5vrGJOuEv8xeccvzjR9](https://docs.google.com/spreadsheets/d/1jN5ThNtmcVJ8txdAGw0ynI5vrGJOuEv8xeccvzjR9qM/edit#gid=2086811131)  
3802 [qM/edit#gid=2086811131](https://docs.google.com/spreadsheets/d/1jN5ThNtmcVJ8txdAGw0ynI5vrGJOuEv8xeccvzjR9qM/edit#gid=2086811131).

3803  
3804 To facilitate its review of the public comments, the EPDP Team developed a set of public  
3805 comment review tools (PCRTs) and discussion tables (see  
3806 <https://community.icann.org/x/Hi6JBw>). Through online review and plenary sessions, the  
3807 EPDP Team completed its review and assessment of the input provided and agreed on  
3808 which priority 2 recommendations and/or conclusions were ready to be included in this  
3809 Final Report.

3812

## Annex E – Legal Committee

Deleted: E

3813

### Phase 2 Questions Submitted to Bird & Bird

3814

3815

1. Consider a System for Standardized Access/Disclosure where:

3816

3817

3818

3819

3820

3821

3822

3823

3824

3825

3826

3827

3828

3829

3830

- contracted parties “CPs” are contractually required by ICANN to disclose registration data including personal data,
- data must be disclosed over RDAP to Requestors either directly or through an intermediary request accreditation/authorization body,
- the accreditation is carried out by third party commissioned by ICANN without CP involvement,
- disclosure takes place in an automated fashion without any manual intervention,
- data subjects are being duly informed according to ICANN’s contractual requirements of the purposes for which, and types of entities by which, personal data may be processed. CP’s contract with ICANN also requires CP to notify data subject about this potential disclosure and third-party processing before the data subject enters into the registration agreement with the CP, and again annually via the ICANN-required registration data accuracy reminder. CP has done so.

3831

Further, assume the following safeguards are in place

3832

3833

3834

3835

3836

3837

3838

3839

- ICANN or its designee has validated/verified the Requestor’s identity, and required in each instance that the Requestor:
  - represents that it has a lawful basis for requesting and processing the data,
  - provides its lawful basis,
  - represents that it is requesting only the data necessary for its purpose,
  - agrees to process the data in accordance with GDPR, and
  - agrees to EU standard contractual clauses for the data transfer.

3840

3841

3842

- ICANN or its designee logs requests for non-public registration data, regularly audits these logs, takes compliance action against suspected abuse, and makes these logs available upon request by the data subject.

3843

3844

3845

1. What risk or liability, if any, would the CP face for the processing activity of disclosure in this context, including the risk of a third party abusing or circumventing the safeguards?

- 3847 2. Would you deem the criteria and safeguards outlined above sufficient to make  
3848 disclosure of registration data compliant? If any risk exists, what improved or  
3849 additional safeguards would eliminate<sup>1</sup> this risk?
- 3850 3. In this scenario, would the CP be a controller or a processor<sup>2</sup>, and to what extent,  
3851 if at all, is the CP's liability impacted by this controller/processor distinction?
- 3852 4. Only answer if a risk still exists for the CP: If a risk still exists for the CP, what  
3853 additional safeguards might be required to eliminate CP liability depending on the  
3854 nature of the disclosure request, i.e. depending on whether data is requested e.g. by  
3855 private actors pursuing civil claims or law enforcement authorities depending on  
3856 their jurisdiction or the nature of the crime (misdemeanor or felony) or the  
3857 associated sanctions (fine, imprisonment or capital punishment)?  
3858
- 3859 Footnote 1: "Here it is important to highlight the special role that safeguards may play in  
3860 reducing the undue impact on the data subjects, and thereby changing the balance of rights  
3861 and interests to the extent that the data controller's legitimate interests will not be  
3862 overridden." ([https://iapp.org/media/pdf/resource\\_center/wp217\\_legitimate-interests\\_04-  
3863 2014.pdf](https://iapp.org/media/pdf/resource_center/wp217_legitimate-interests_04-2014.pdf))  
3864
- 3865 Footnote 2: [https://ec.europa.eu/info/law/law-topic/data-protection/reform/rules-business-  
3866 and-organisations/obligations/controller-processor/what-data-controller-or-data-processor\\_en](https://ec.europa.eu/info/law/law-topic/data-protection/reform/rules-business-and-organisations/obligations/controller-processor/what-data-controller-or-data-processor_en)  
3867
- 3868 2. To what extent, if any, are contracted parties liable when a third party that accesses  
3869 non-public WHOIS data under an accreditation scheme where by the accessor is  
3870 accredited for the stated purpose, commits to certain reasonable safeguards similar to a  
3871 code of conduct regarding use of the data, but misrepresents their intended purposes  
3872 for processing such data, and subsequently processes it in a manner inconsistent with  
3873 the stated purpose. Under such circumstances, if there is possibility of liability to  
3874 contracted parties, are there steps that can be taken to mitigate or reduce the risk of  
3875 liability to the contracted parties?  
3876
- 3877 3. Assuming that there is a policy that allows accredited parties to access non-public  
3878 WHOIS data through an SSAD (and requires the accredited party to commit to certain  
3879 reasonable safeguards similar to a code of conduct), is it legally permissible under  
3880 Article 6(1)(f) to:  
3881
- 3882 · define specific categories of requests from accredited parties (e.g. rapid response  
3883 to a malware attack or contacting a non-responsive IP infringer), for which there can  
3884 be automated submissions for non-public WHOIS data, without having to manually  
3885 verify the qualifications of the accredited parties for each individual disclosure  
3886 request, and/or

- 3887 · enable automated disclosures of such data, without requiring a manual review by  
3888 the controller or processor of each individual disclosure request.  
3889

3890 In addition, if it is not possible to automate any of these steps, please provide any guidance  
3891 for how to perform the balancing test under Article 6(1)(f).  
3892

3893 For reference, please refer to the following potential safeguards:  
3894

- 3895 · Disclosure is required under CP's contract with ICANN (resulting from Phase 2  
3896 EPDP policy).  
3897 · CP's contract with ICANN requires CP to notify the data subject of the purposes for  
3898 which, and types of entities by which, personal data may be processed. CP is  
3899 required to notify data subject of this with the opportunity to opt out before the  
3900 data subject enters into the registration agreement with the CP, and again annually  
3901 via the ICANN-required registration data accuracy reminder. CP has done so.  
3902 · ICANN or its designee has validated the Requestor's identity, and required that the  
3903 Requestor:  
3904 o represents that it has a lawful basis for requesting and processing the data,  
3905 o provides its lawful basis,  
3906 o represents that it is requesting only the data necessary for its purpose,  
3907 o agrees to process the data in accordance with GDPR, and  
3908 o agrees to standard contractual clauses for the data transfer.  
3909 · ICANN or its designee logs requests for non-public registration data, regularly  
3910 audits these logs, takes compliance action against suspected abuse, and makes  
3911 these logs available upon request by the data subject.  
3912

3913 4. Under the GDPR, a data controller can disclose personal data to law enforcement of  
3914 competent authority under Art. 6 1 c GDPR provided the law enforcement authority has  
3915 the legal authority to create a legal obligation under applicable law. Certain  
3916 commentators have interpreted "legal obligation" to apply only to legal obligations  
3917 grounded in EU or Member State law.  
3918

3919 As to the data controller:  
3920

3921 a. Consequently, does it follow that the data controller may not rely on Art. 6 1 c GDPR to  
3922 disclose personal data to law enforcement authorities outside the data controller's  
3923 jurisdiction? Alternatively, are there any circumstances in which data controllers could rely  
3924 on Art. 6 1 c GDPR to disclose personal data to law enforcement authorities outside the  
3925 data controller's jurisdiction?  
3926

3927 b. May the data controller rely on any other legal bases, besides Art. 6 I f GDPR, to disclose  
3928 personal data to law enforcement authorities outside the data controller's jurisdiction?  
3929

3930 As to the law enforcement authority:

3931

3932 Given that Art. 6 1 GDPR states that European public authorities cannot use Art. 6 1 f GDPR  
3933 as a legal basis for processing carried out in the performance of their tasks, these public  
3934 authorities need to have a legal basis so that disclosure can take place based on another  
3935 legal basis (e.g. Art. 6 1 c GDPR).

3936

3937 c. In the light of this, is it possible for non-EU-based law enforcement authorities to rely on  
3938 Art. 6 1 f GDPR as a legal basis for their processing? In this context, can the data controller  
3939 rely on Art. 6 1 f GDPR to disclose the personal data? If non-EU-based law enforcement  
3940 authorities cannot rely on Art. 6 1 f GDPR as a legal basis for their processing, on what  
3941 lawful basis can non-EU-based law enforcement rely?

3944

#### 3945 **Questions 1 and 2**

3946

3947 Executive Summary:

3948 The EPDP Phase 2 team sent its first batch of questions to Bird & Bird on 29 August 2019. Bird &  
3949 Bird answered this batch of questions in a series of three memos. Memo 1 was delivered on 9  
3950 September 2019. Memo 1 analyzed the legal role of contracted parties in the proposed System  
3951 for Standardized Access/Disclosure (SSAD), the sufficiency of the proposed safeguards, and the  
3952 risk of liability to contracted parties for disclosure via the SSAD. The questions sent to Bird &  
3953 Bird are provided in the Annex to this document and include a series of assumptions in Section  
3954 1.1 and 1.2 that are part of the factual basis for the responses below.

3955

3956 In response to these questions, Bird & Bird noted the following with respect to controllership:

3957 1. Contracted parties are likely controllers in the SSAD since registrants have traditionally  
3958 reasonably expected that contracted parties are the controller for disclosure of their  
3959 data to third parties. It is difficult to show that contracted parties are only serving  
3960 ICANN org's interests, particularly in light of relevant judicial decisions that suggest a  
3961 low threshold for controllership.

3962 2. If the EPDP Team wanted to recommend a policy under which contracted parties are  
3963 processors in a SSAD, steps could be taken to support this policy goal. Contracted  
3964 parties would need to have no substantial influence over key aspects of SSAD data  
3965 processing, such as (i) which data shall be processed; (ii) how long shall they be  
3966 processed; and (iii) who shall have access to the data. There would also be a need for  
3967 "constant and careful" supervision by ICANN org "to ensure thorough compliance of the

---

<sup>59</sup> To be updated when Legal committee signs off on executive summaries

3968 processor with instructions and terms of the contract”, and efforts to instruct  
3969 registrants that contracted parties are only acting on ICANN org’s behalf (e.g., ICANN org  
3970 website materials, privacy notices, information in domain name registration process).  
3971 3. However, the most likely outcome and starting position for supervisory authorities  
3972 would be that contracted parties are controllers and likely joint controllers with ICANN  
3973 org regarding disclosure of registration data through the SSAD.

3974 Bird & Bird noted the following with respect to SSAD safeguards and liability:

- 3975 4. Given the number of jurisdictions involved, and the likely variety of requests that could  
3976 be handled by the SSAD, Bird & Bird could not confirm that the criteria and safeguards  
3977 described in the assumptions would make disclosure of data in a fully automated SSAD  
3978 compliant.
- 3979 5. Bird & Bird suggested additional safeguards that the EPDP should consider related to (i)  
3980 legal basis, proportionality, and data minimization; (ii) individual rights; (iii) international  
3981 data transfer; and (iv) security.
- 3982 6. Under the GDPR, parties involved in the same processing are subject to liability to both  
3983 individuals and supervisory authorities. Individual liability is joint and several, meaning  
3984 each party involved in the processing is potentially liable for all damages to the data  
3985 subject, with some differing standards for controllers vs. processors. Supervisory  
3986 authorities may proceed against controllers or processors, and it is currently unclear  
3987 whether joint and several liability applies when multiple parties involved in the same  
3988 processing (i.e., enforcement action isn’t appropriate if others are responsible).

3989

---

3990 1. Are Contracted Parties Controllers or Processors?

3991 Controllers

- 3992 ● Liability is significantly impacted by whether Contracted Parties are controllers or  
3993 processors. (1.4)
- 3994 ● A controller is the “natural or legal person, public authority, agency or other body  
3995 which, alone or jointly with others, determines the purposes and means of the  
3996 processing of personal data.” (2.2)
- 3997 ● Whether an entity is a controller is a factual determination based on “control over key  
3998 data processing decisions.” The role of controller cannot be assigned or disclaimed.  
3999 (2.3)

- 4000 ● The Article 29 Working Party provided pre-GDPR guidance on the roles of controller and  
4001 processor. The EDPB is currently revising this guidance with an update anticipated in  
4002 the next six months. (2.4, 2.19)
- 4003 ● The EDPB's predecessor, the Article 29 Working Party (WP29) determined that "the first  
4004 and foremost role of the concept of controller is to determine who shall be responsible  
4005 for compliance with data protection rules, and how data subjects can exercise the rights  
4006 in practice. In other words: to allocate responsibility." Read literally, this reflects that a  
4007 controller has responsibility for most obligations under the GDPR; but the phrase also  
4008 indicates a degree of regulatory expediency: it shows the underlying need to hold  
4009 someone accountable. This can influence a court or supervisory authority's approach,  
4010 says B&B. (2.4)
- 4011 ● An entity that makes key decisions (alone, or jointly with others) about (i) what data is  
4012 processed; (ii) the duration of processing; and (iii) who has access to data is acting as a  
4013 controller, not a processor – these are sometimes referred to as the "essential  
4014 elements" of processing. (2.6)
- 4015 ● An entity can be both a controller and a processor. This will be the case where an entity  
4016 that acts as a processor also makes use of personal data for its own purposes. (2.7)
- 4017 Processors
- 4018 ● A processor is the "natural or legal person, public authority, agency or other body,  
4019 which processes personal data on behalf of the controller." (2.5)
- 4020 ● The Article 29 Working Party guidance emphasizes the importance of examining "the  
4021 degree of actual control exercised by a party, the image given to data subjects and the  
4022 reasonable expectations of data subjects on the basis of this visibility" in determining  
4023 whether an entity is a controller or processor. (2.5)
- 4024 ● According to WP29, a processor serves "someone else's interest" by "implement[ing]  
4025 the instructions given by the controller at least with regard to the purpose of the  
4026 processing and the essential elements of the means." (2.5)
- 4027
- 4028 ● A processor can only process personal data pursuant to instructions of the controller or  
4029 as required by EEA or Member State law. (2.7)
- 4030 Application to the SSAD
- 4031 Presumption of controllership
- 4032 ● In some cases, "existing traditional roles that normally imply a certain responsibility will  
4033 help identifying the controller: for example, the employer in relation to data on his

4034 employees, the publisher in relation to data on subscribers, the association in relation to  
4035 data on its members or contributors". The relation between a Contracted Party and  
4036 registrant (or registrant's contact) could be regarded in a similar way. (2.8) Similarly, the  
4037 "image given to data subjects and the reasonable expectations of data subjects" is an  
4038 important consideration for determining controllership. A registrant will typically  
4039 expect that Contracted Parties are the controller for disclosure of their data to third  
4040 parties. (2.9)

4041 ● Since Contracted Parties are currently seen as the controller for disclosure of data to  
4042 third parties, this will lead to a presumption that Contracted Parties continue to be  
4043 controllers, even once an SSAD is implemented. (2.9)

4044 ● However, such a presumption can't always be made, depending on analysis of technical  
4045 processing activities. WP169 does note that where there is an assumption that a person  
4046 is a controller (referred to in WP169 as "control stemming from implicit competence")  
4047 that this should only be the case "unless other elements indicate the contrary". Recent  
4048 cases from the CJEU – in particular its recent Fashion ID ruling – have also supported  
4049 closer, fact-specific analysis. (2.11)

4050 Difficulty presenting Contracted Parties as acting "on behalf of" someone else

4051 ● The most important element of a processor's role is that they only act on behalf of the  
4052 controller. It will be difficult to show that Contracted Parties are only serving ICANN's  
4053 interests and processing data on ICANN's behalf. (2.10)

4054 ● Disclosure of data is likely to be seen as an inevitable consequence of being a  
4055 Contracted Party, not something that Contracted Parties agree to do on ICANN's behalf.  
4056 (2.10)

4057 Close factual analysis of technical processing activities

4058 ● The factual threshold for becoming a controller (determining purposes or means of  
4059 processing) is low. The test, according to the CJEU, is simply whether someone "exerts  
4060 influence over the processing of personal data, for his own purposes, and (...)   
4061 participates, as a result, in the determination of the purposes and means of that  
4062 processing". (2.12)

4063 ● In the CJEU's Jehovan Todistajat ruling, the national Jehovah's Witnesses community  
4064 organization was stated to have "general knowledge" and to have encouraged and  
4065 coordinated data collection by community members (door to door preachers) at a very  
4066 general level – but it was nevertheless held to have satisfied the test for joint  
4067 controllership with those community members. In the CJEU's Fashion ID ruling, it was  
4068 sufficient for the website operator to integrate with Facebook platform code, such that  
4069 the operator thereby participated in determination of the "means" of Facebook's data  
4070 collection, and was a joint controller with Facebook. (2.14)

- 4071 ● Courts and supervisory authorities are therefore likely to consider that a Contracted  
4072 Party is involved in determining the means of processing, possibly just by  
4073 implementing/interfacing with the SSAD. (2.14)
- 4074 Factors that could support processor status
- 4075 ● The key to avoid controller status is being able to show that you are not involved in  
4076 determining the "essential elements" of processing (2.6).
- 4077 ● Also, ICANN monitoring compliance with a contractual requirement to disclose data  
4078 could be proof of a controller processor relationship, since "constant and careful  
4079 supervision by the controller to ensure thorough compliance of the processor  
4080 with instructions and terms of contract provides an indication that the controller  
4081 is still in full and sole control of the processing operations." (2.16)
- 4082 ● Taking steps to clearly inform data subjects that data is collected only on ICANN's behalf  
4083 (e.g. disclosures in domain name registration process, annual data accuracy reminder,  
4084 privacy notices, ICANN org website materials) and other presentations that clearly  
4085 depict this action as being performed by CPs solely on ICANN's behalf could result in  
4086 individuals becoming more aware of ICANN's role as a Controller, and the Contracted  
4087 Parties' role as a processor. (2.17)
- 4088 Summary – Contracted Parties most likely joint controllers with ICANN
- 4089 ● The most likely outcome and the starting point for supervisory authorities is that  
4090 Contracted Parties are controllers. (2.18)
- 4091 ● ICANN's role in determining purpose and means of processing suggests they are joint  
4092 controllers with Contracted Parties for the disclosure of data to third parties. (2.18)
- 4093 2. Are the Safeguards Proposed Sufficient to Make Disclosure of Registration Data Compliant?
- 4094 SSAD safeguards
- 4095 ● Given the number of jurisdictions involved, and the likely variety of requests that could  
4096 be handled by the SSAD, this opinion cannot confirm that the criteria and safeguards  
4097 described in the assumptions would make disclosure of data in a fully automated system  
4098 compliant. (3.8)
- 4099 ● B&B states that care must be taken in processing personal data -- a processor (either in  
4100 breach of its contract with the controller or otherwise behaving in a way inconsistent  
4101 with the instructions of the controller) can become a controller itself, and thus face  
4102 breaches (as identified in the table on p.7 of the memo). (3.6)
- 4103 ● The safeguards described are helpful, but will need to include additional measures  
4104 described below. (3.8)

- 4105           ○ Legal basis: safeguards need to (i) consider whether Contracted Parties, not just  
4106 Requestor, have a legal basis for processing; (ii) account for the particular legal  
4107 framework applicable to a Contracted Party; (iii) ensure that an appropriate  
4108 balancing test is performed on legitimate interests, if that is an appropriate legal  
4109 basis in a given case<sup>60</sup> (and it may not be safe to assume that for a category of  
4110 requests that the balance of interests is always in favor of disclosure; certain  
4111 cases, such as investigations or prosecutions that could lead to capital  
4112 punishment, might be especially problematic); and (iv) assurances that improper  
4113 data types or volumes will not be disclosed to requestors (e.g., rule-based  
4114 monitoring or blocking of unusual request sizes, permissioning systems). (3.9 –  
4115 3.12)
- 4116           ○ Individual rights: address how data subject requests are handled, including (i)  
4117 access rights to request logs (which may themselves be high risk or even "special  
4118 category" personal data); (ii) appropriate time period for retention of those logs;  
4119 (iii) the manner in which information is provided to data subjects; (iv) how to  
4120 deal with situations where Requestor insists on not providing information to the  
4121 data subject (e.g., law enforcement confidentiality); and (v) requests to restrict  
4122 or block processing. (3.13 – 3.16)
- 4123           ○ Data transfer: for international data transfers, EPDP envisages relying on the EU  
4124 Standard Contractual Clauses (SCC) legal safeguarding mechanism, however (i)  
4125 some Requestors, including public authorities, will not agree to their terms; (ii)  
4126 the terms of the SCCs are not easy to comply with, especially at scale; (iii) if EEA  
4127 Contracted Parties are processors they cannot directly rely on SCCs to transfer  
4128 data to ICANN org or Requestors outside of the EEA, so a workaround would  
4129 need to be found. (3.17)
- 4130           ○ Security: safeguards should be proportionate to the risk to data subjects should  
4131 their data be compromised. (3.18)

### 4132 3. What is the Risk of Liability to Contracted Parties for Disclosure?

- 4133           ● If the safeguards are inadequate or abused/circumvented by Requestors (or other  
4134 aspects of the GDPR are contravened, e.g. inadequate notice or lack of a legal basis for  
4135 processing), Contracted Parties could face investigations, enforcement orders (e.g.  
4136 processing prohibitions), and (financially) both liability to individuals (civil) and liability  
4137 to supervisory authorities (fines).
- 4138           ● In broad strokes, B&B offers in pertinent parts that (1) where parties are joint  
4139 controllers, this does not mean that the parties each have to undertake all elements of  
4140 compliance, (2) if CPs are processors, they will only be liable to individuals (civil liability)

Deleted: requester

<sup>60</sup> If disclosure is a legal obligation pursuant to EU or EU/EEA Member State laws (including treaties to which the EU or a relevant member State is a party), there is no need to consider the legitimate interests test.

4142 under art. 82 if they have failed to comply with obligations placed on processors under  
4143 the Regulation, or have acted outside or contrary to lawful instructions from the  
4144 controller, (3) even when parties are deemed to be joint controllers, recent court  
4145 decisions (concerning enforcement by supervisory authorities) have emphasized that  
4146 joint control does not imply equal responsibility for breaches of the GDPR, and (4) CPs,  
4147 as joint controllers with ICANN org, would benefit from clear allocation of  
4148 responsibilities under the terms of the joint controllership “arrangement” they must  
4149 enter into pursuant to GDPR Art. 26.

#### 4150 Liability to individuals

- 4151 ● GDPR Article 82 sets out the rules on liability to individuals. (4.2)
- 4152 ● Controllers are liable for damages caused by processing that violates GDPR. Processors  
4153 are liable for damages caused by processing where the processor has not complied with  
4154 processor specific requirements or where the processor acted outside of or contrary to  
4155 instructions from the controller. (4.2)
- 4156 ● A controller or processor is not liable if it proves it was in no way responsible for the  
4157 event resulting in damages. (4.2)
- 4158 ● Where multiple controllers or processors involved in the same processing, each entity is  
4159 liable for the entire damages (joint and several liability) to individuals (4.2, 4.3)
- 4160 ● If Contracted Parties are processors, they are only liable if they fail to comply with  
4161 processor-specific obligations under GDPR or act outside or contrary to instructions  
4162 from the controller. In such a scenario, it is unlikely Contracted Parties would violate  
4163 the controller’s instructions because the SSAD is automated; the more likely source of  
4164 liability for them, therefore, would be for having inadequate security measures, or  
4165 failing to comply with the GDPR’s rules on international data transfers. Contracted  
4166 Parties could look to ICANN org to prescribe security and international transfer  
4167 arrangements to give Contracted Parties ability to argue that they are “not in any way  
4168 responsible for the event giving rise to the damage.” (4.4)
- 4169 ● If Contracted Parties are controllers, and if disclosure violates GDPR, they are unlikely to  
4170 avoid liability to individuals if they cannot prove that they are “not in any way  
4171 responsible for the event giving rise to the damage,” if they actively participate in the  
4172 disclosure event.
- 4173 ● Any liability creates the potential that Contracted Parties would be liable for all damages  
4174 to the data subject. This risk is highest under a joint controller scenario. (4.5, 4.6).
- 4175 ● Contracted Parties held liable for the entirety of damages to a data subject can seek  
4176 appropriate contributions from other responsible parties. (4.7)

- 4177 ● As controllers, Contracted Parties and ICANN would have a positive obligation to  
4178 address the risk of Requestors seeking improper access to personal data. Safeguards  
4179 must be appropriate to the level of risk. If a Requestor circumvents SSAD safeguards,  
4180 courts might accept that the safeguards were adequate, which would limit Contracted  
4181 Parties' primary liability. (4.9, 4.10)
- 4182 ● Even in the event of a GDPR breach caused by a Requestor, the Contracted Parties,  
4183 ICANN, and the Requestor may be deemed "involved in the same processing" with each  
4184 party jointly and severally liable for damages arising from that breach. Contracted  
4185 Parties and ICANN may be able to argue that they are "not in any way responsible for  
4186 the event giving rise to damage" but otherwise would need to seek recovery from the  
4187 Requestor or join the Requestor in the initial proceedings in order to apportion  
4188 damages. (4.11)
- 4189 Liability to supervisory authorities
- 4190 ● Supervisory authorities may proceed against controllers or processors. (4.12)
- 4191 ● It is unclear whether joint and several liability applies where multiple parties are  
4192 involved in processing (i.e., enforcement action arguably isn't appropriate if others are  
4193 responsible). (4.13)
- 4194 ● There needs to be clear wording in a law, to impose joint and several liability - this  
4195 strengthens the argument that this would have been stated expressly if it was intended  
4196 in respect of fines from supervisory authorities. Art. 83(2)(d) makes it clear that  
4197 joint/several liability doesn't apply concerning supervisory authorities. (4.13.2)
- 4198 ● Even when parties are joint controllers, recent court decisions (about enforcement by  
4199 supervisory authorities) emphasize that joint control doesn't imply equal responsibility  
4200 for GDPR breaches. (4.13.4)
- 4201 ● Contracted Parties and ICANN would therefore benefit from clearly allocated  
4202 responsibilities under a joint controllership arrangement (and a joint controllership  
4203 arrangement is in any case mandatory, in all joint control situations, pursuant to GDPR  
4204 Art. 26). (4.14)
- 4205 ● It may be possible to take advantage of the "lead authority" (a.k.a. "one stop shop" or  
4206 "consistency") provisions of GDPR to ensure that any enforcement action takes place  
4207 through ICANN org's Brussels establishment, rather than against Contracted Parties.  
4208 This mechanism is only available where there is cross-border processing of personal  
4209 data (entities in multiple EEA member states, or effects on data subjects in multiple EEA  
4210 member states). (4.15 – 4.17)
- 4211 ● The "lead authority" provisions in GDPR don't specifically address joint controllerships,  
4212 but guidance suggests that if ICANN org and Contracted Parties designated ICANN's  
4213 Belgian establishment as the main establishment for the processing (i.e., where

4214 decisions regarding processing are made) it may minimize the risk of enforcement  
4215 directly against Contracted Parties. This is a novel and untested approach. (4.15 – 4.20)

4216

4217 Annex:

4218 Legal Questions 1 & 2: Liability, Safeguards, Controller & Processor

4219

4220 As the EPDP Team deliberated on the architecture of an SSAD, several questions came up with  
4221 respect to liability and safeguards. In response, the Phase 2 Legal Committee formulated the  
4222 following questions to outside counsel:

4223

4224

1. Consider a System for Standardized Access/Disclosure where:

4225 o contracted parties “CPs” are contractually required by ICANN to disclose  
4226 registration data including personal data,

4227 o data must be disclosed over RDAP to Requestors either directly or through an  
4228 intermediary request accreditation/authorization body,

4229 o the accreditation is carried out by third party commissioned by ICANN  
4230 without CP involvement,

4231 o disclosure takes place in an automated fashion without any manual  
4232 intervention,

4233 o data subjects are being duly informed according to ICANN’s contractual  
4234 requirements of the purposes for which, and types of entities by which, personal  
4235 data may be processed. CP’s contract with ICANN also requires CP to notify data  
4236 subject about this potential disclosure and third-party processing before the data  
4237 subject enters into the registration agreement with the CP, and again annually  
4238 via the ICANN-required registration data accuracy reminder. CP has done so.

4239 Further, assume the following safeguards are in place

4240 ● ICANN or its designee has validated/verified the Requestor’s identity, and  
4241 required in each instance that the Requestor:

4242 o represents that it has a lawful basis for requesting and processing  
4243 the data,

4244 o provides its lawful basis,

4245 o represents that it is requesting only the data necessary for its  
4246 purpose,

4247 o agrees to process the data in accordance with GDPR, and

4248 o agrees to EU standard contractual clauses for the data transfer.

4249 ● ICANN or its designee logs requests for non-public registration data,

4250 regularly audits these logs, takes compliance action against suspected

4251 abuse, and makes these logs available upon request by the data subject.

- 4252 a. What risk or liability, if any, would the CP face for the processing activity of  
4253 disclosure in this context, including the risk of a third party abusing or circumventing  
4254 the safeguards?
- 4255 b. Would you deem the criteria and safeguards outlined above sufficient to make  
4256 disclosure of registration data compliant? If any risk exists, what improved or  
4257 additional safeguards would eliminate<sup>611</sup> this risk?
- 4258 c. In this scenario, would the CP be a controller or a processor<sup>622</sup>, and to what  
4259 extent, if at all, is the CP's liability impacted by this controller/processor distinction?
- 4260 d. Only answer if a risk still exists for the CP: If a risk still exists for the CP, what  
4261 additional safeguards might be required to eliminate CP liability depending on the  
4262 nature of the disclosure request, i.e. depending on whether data is requested e.g. by  
4263 private actors pursuing civil claims or law enforcement authorities depending on  
4264 their jurisdiction or the nature of the crime (misdemeanor or felony) or the  
4265 associated sanctions (fine, imprisonment or capital punishment)?
- 4266
- 4267 2. To what extent, if any, are contracted parties liable when a third party that accesses non-  
4268 public WHOIS data under an accreditation scheme where by the accessor is accredited for the  
4269 stated purpose, commits to certain reasonable safeguards similar to a code of conduct  
4270 regarding use of the data, but misrepresents their intended purposes for processing such data,  
4271 and subsequently processes it in a manner inconsistent with the stated purpose. Under such  
4272 circumstances, if there is possibility of liability to contracted parties, are there steps that can be  
4273 taken to mitigate or reduce the risk of liability to the contracted parties?  
4274  
4275

---

<sup>61</sup> "Here it is important to highlight the special role that safeguards may play in reducing the undue impact on the data subjects, and thereby changing the balance of rights and interests to the extent that the data controller's legitimate interests will not be overridden." 4276 **Question 3**

4277  
4278 **Executive Summary:**

4279 The EPDP Phase 2 team sent its first batch of questions to Bird & Bird on 29 August 2019. Bird &  
4280 Bird answered this batch of questions in a series of three memos. [Memo 2](#) was delivered on 10  
4281 September 2019 and analyzed questions related to how the legitimate interests “balancing  
4282 test” required under GDPR Art 6(1)(f) could be applied in a SSAD, either in highly automated  
4283 fashion (Question A) or, if it is not possible to automate such a decision, then how the balancing  
4284 test should be performed (Question B). The full questions are provided in Annex A to this  
4285 summary and include a series of assumptions that are part of the factual basis for the responses  
4286 below.

4287 In response to Question A, Bird & Bird noted the following with respect to automation:

- 4288 1. The highly-automated process described by the EPDP team could amount to solely  
4289 automated decision making having a legal or similarly significant effect on the data  
4290 subjects ("data subjects" here would be the targets of requests for nonpublic gTLD  
4291 data).
- 4292 2. This is generally is not permitted unless one of the limited legal bases/exemptions under  
4293 GDPR Art. 22(1) would justify the disclosure. This is much narrower than GDPR Art.  
4294 6(1)(f). It would be difficult for the SSAD, as proposed, to meet the GDPR Art. 22(1)  
4295 exemptions; the SSAD must therefore be structured so it doesn't fall into the scope of  
4296 Article 22 in the first place.
- 4297 3. To achieve this it would be necessary to limit automatic access/disclosure to situations  
4298 where there will be no "legal or similarly significant effects" for the data subject.  
4299 Examples provided in the memo include the release of admin contact details for non-  
4300 natural registrants in response to malware attacks or IP infringement. The process for  
4301 dealing with higher-risk requests should not be fully automated; some meaningful  
4302 human involvement (at least, oversight) should be present.
- 4303 4. Alternatively, the SSAD could potentially be structured so that it does not make a  
4304 decision based on its automatic processing of personal data relating to targets of a  
4305 request. For example, the SSAD could publish the categories of requests which will be  
4306 accepted and ask Requestors to confirm that they meet the relevant criteria. By instead  
4307 requiring *the Requestor* to conduct the necessary analysis and then certify the outcome  
4308 to the SSAD, the SSAD would then arguably not make a decision (to release data) based  
4309 on its own automated processing of personal data, so GDPR Art. 22 would not apply.  
4310 However, relying on self-certification by Requestors perhaps creates scope for abuse of  
4311 the system by Requestors, which (as previous answers explained) could mean liability  
4312 for ICANN and the Contracted Parties.
- 4313 5. As regards authentication of the Requestor (as a distinct step from evaluating the  
4314 grounds or other parameters of a request), Bird & Bird think it would certainly be

Deleted: Requester

Deleted: Requester

Deleted: Requester

4318 possible to automate the process to authenticate the person making the request. It may  
4319 also be possible to automate other aspects of the request process.

4320 In response to Question B, Bird & Bird:

- 4321 1. Set out the EU (WP29)'s official guidance on how the Art. 6(1)(f) legitimate interests  
4322 balancing test should be conducted;
- 4323 2. Noted that if ICANN and Contracted Parties are joint controllers, they must both  
4324 establish a legitimate interest in the processing. So far as Contracted Parties are  
4325 concerned, it is likely that the relevant interest will be that of the third party, the  
4326 Requestor. ICANN, in contrast, may be able to establish its interest in the security,  
4327 stability and resilience of the domain name system *as well as* the interest of the third  
4328 party requestor; and
- 4329 3. Provided a high level discussion of safeguards that could be deployed in order to further  
4330 tip the scales in favour of the processing envisaged as part of the SSAD.

Deleted: Requester

Deleted: requester

#### 4331 **1. Question A**

4332 **Question A asks whether GDPR Article 6(1)(f) (the "legitimate interests" legal basis for**  
4333 **processing) would allow the SSAD to automatically process requests (at least in certain**  
4334 **predefined categories), without requiring manual, request-by-request (i) verification that the**  
4335 **request meets the relevant criteria for disclosure; and (ii) disclosure of the relevant**  
4336 **registration data.**

4337 *The SSAD could fall within the scope of GDPR Art. 22, rather than purely being concerned with*  
4338 *GDPR Art. 6(1)(f)*

- 4339 • GDPR Art. 6(1)(f) permits automated processing *unless* this would amount to  
4340 "automated individual decision-making" having legal or similarly significant effects for  
4341 the data subject ("solely automated decision making"), which generally is not permitted  
4342 unless one of the more limited legal bases/exemptions under GDPR Art. 22(1) would  
4343 justify the disclosure.
- 4344 • While GDPR Article 22 states that a data subject has a "right not to be subject to" such a  
4345 decision, in practice Article 22 has been interpreted by regulators as a general  
4346 *prohibition* (i.e. there is no need for the data subject to object to such decision-making).
- 4347 • The process described by the EPDP team could amount to such automated decision-  
4348 making affecting the target of a request (for instance, when law enforcement wants to  
4349 bring a prosecution against individuals running unlawful websites).
- 4350 • If art.22 applies to the processing described by the EPDP, i.e. **if SSAD processing**  
4351 **amounts to an automated individual decision having legal or similarly significant**  
4352 **effects, it would not be permitted under GDPR Art. 6(1)(f) (the "legitimate interests"**

4355 **basis for processing).** Art. 22(1) sets out its own, more limited set of grounds on which  
4356 Art. 22 decision-making can be based.

- 4357 • B&B advises that **it will be hard for the SSAD to meet the exemptions in Art. 22(1); so**  
4358 **therefore, the EPDP should ensure that SSAD processing does not fall within the scope**  
4359 **of Art. 22.**

4360 *Mitigation strategy 1: avoiding decisions if they might have "legal or similarly significant*  
4361 *effects" for individuals whose data is disclosed*

- 4362 • One way to achieve this could be by limiting automatic access and disclosure to  
4363 situations where there will not be "legal or similarly significant effects" for the data  
4364 subject.
- 4365 • A decision to release data via the SSAD would not in itself have a "legal effect" on the  
4366 data subject. The more relevant test for the SSAD is "similarly significant effects." This  
4367 means something similar to having legal effect -- something worthy of attention (e.g.,  
4368 significantly affect the circumstances, behavior or choices of the individuals  
4369 concerned).<sup>63</sup>
- 4370 • It may be possible to determine categories of requests that don't have a "legal or  
4371 similarly significant" effect on the individual, like releasing admin contact details for  
4372 non-natural (company/organizational/institutional) registrants. Other disclosures  
4373 involving registrant data of a natural person may be much more likely to have a  
4374 "similarly significant effect." Considerable care would need to be taken over such  
4375 analysis.
- 4376 • For decisions more likely to have a "significant effect", human review or oversight would  
4377 be necessary. "Token" human involvement would not suffice. For the human review  
4378 element to count, the controller must ensure meaningful oversight by someone who has  
4379 the authority and competence to change the decision.

4380 *Mitigation strategy 2: Avoiding SSAD designs that involve processing of personal data about the*  
4381 *target of a request in order to decide whether to comply with the request*

- 4382 • It may also be possible to structure the SSAD so it doesn't involve "a decision based  
4383 solely on automated processing." GDPR Article 22 requires the decision to be based on  
4384 processing of *personal data*. If decisions are based on something other than personal  
4385 data, GDPR Article 22 does not apply.
- 4386 • Therefore, rather than the SSAD requesting details from requestors (e.g. information  
4387 about the target of the request, e.g. the registrant, and why their data is required), and

Deleted: requester

<sup>63</sup> According to official guidance, the following are classic examples of decisions that could be sufficiently significant: (i) decisions that affect someone's financial circumstances; (ii) decisions that affect access to health services; (iii) decisions that deny employment opportunities or put someone at a serious disadvantage; (iv) decisions that affect someone's access to education.

4389 then analyzing that information (automatically) in order to evaluate whether the  
 4390 relevant criteria for release of non-public registration data are met, the SSAD could  
 4391 instead publish the categories of requests which will be accepted, and ask Requestors to  
 4392 confirm that they meet the relevant criteria. In this case, the SSAD would not process  
 4393 *personal data* about the target of the request, in order to reach a decision to release the  
 4394 data – so Article 22 would not apply.

4395 • As noted for earlier questions, parties involved in the SSAD have a responsibility to take  
 4396 "appropriate technical and organisational measures" to protect against the risk of  
 4397 misuse of the SSAD system by Requestors.

Deleted: Requester

4398 • Any decision to rely on self-certification, rather than assessing requests, would  
 4399 therefore need to be balanced carefully against these risk mitigation obligations; this  
 4400 would likely narrow the occasions when this self-declaration approach could be used.  
 4401 Bird & Bird notes that under such a scheme, the SSAD could still ask Requestors to  
 4402 provide additional information about the nature of their request *for audit purposes* –  
 4403 but it would not be used to evaluate the request itself (i.e. it would not be used for  
 4404 automated decision-making).

Deleted: Requester

4405 **2. Question B**

4406 In this question, **the EPDP team asks for guidance on how to perform the balancing test under**  
 4407 **6(1)(f) (assuming it’s not possible to automate the steps described).**

- 4408 • Official guidance is that the balancing test should be divided into four steps:
- 4409 1. Assess the interest which the processing meets
  - 4410 2. Consider the impact on the data subject
  - 4411 3. Undertake a provisional balancing test
  - 4412 4. Consider the impact of any additional safeguards deployed to prevent any undue  
 4413 impact on the data subject.

4414 **1. Assessing the controller’s legitimate interest**

- 4415 • 6(1)(f) says you can lawfully process if it is “necessary for the purposes of the legitimate  
 4416 interests pursued by the controller or a third party.”
- 4417 • There are three sub-elements to this: (i) legitimacy; (ii) existence of an interest; and (iii)  
 4418 necessity.

4419 *Legitimacy*

- 4422 • It seems that “legitimacy” is not a high test -- WP29 said “an interest can be considered  
4423 as legitimate as long as the controller can pursue this interest in a way that is in  
4424 accordance with data protection and other laws.”

4425 *Establishing "interest" in the processing*

- 4426 • B&B notes that if ICANN and Contracted Parties are joint controllers, they must both  
4427 establish a legitimate interest in the processing. So far as Contracted Parties are  
4428 concerned, it is likely that the relevant interest will be that of the third party, the  
4429 requestor. ICANN, in contrast, may be able to establish its interest in the security,  
4430 stability and resilience of the domain name system as well the interest of the third party  
4431 requestor.

Deleted: requester

Deleted: requester

- 4432 • “Interest” is not the same as “purpose.”
  - 4433 ○ “Purpose” is the specific reason why the data is processed
  - 4434 ○ “Interest” is the broader stake that a controller may have in the processing, or  
4435 the benefit the controller derives, or that society might derive from the  
4436 processing. (This also means that interests could be public or private; for  
4437 example, in the case of actions to prevent trademark infringement, there could  
4438 be a private interest for the person whose trademark has been infringed and a  
4439 wider public interest in preventing a risk of confusion by the public. This factor  
4440 could usefully be noted in the documentation of the balancing test.)

- 4441 • Interest must be “real and specific”, not “vague and speculative.”
- 4442 • At p.25, WP217 provides a non-exhaustive list of contexts in which legitimate interests  
4443 may arise, including:
  - 4444 ○ "Exercise of the right to freedom of expression or information, including in the  
4445 media and the Arts"
  - 4446 ○ Enforcement of legal claims
  - 4447 ○ Prevention of fraud, misuses of services,
  - 4448 ○ Physical security, IT and network security
  - 4449 ○ Processing for research purposes

- 4450 • The EPDP suggests that potential SSAD safeguards could include requiring the requestor  
4451 to represent that it has a lawful basis for making the request and that it can "provide its  
4452 lawful basis". However, where data will be released pursuant to art.6(1)(f), then it  
4453 would be more helpful for the requestor to confirm its *interest* in receiving the personal  
4454 data.

Deleted: requester

Deleted: requester

4459 *Necessity*

- 4460 • With regard to necessity, B&B advises the proposed processing (disclosure) must be  
4461 “necessary” for this interest.
- 4462 ○ The CEJU Oesterreichischer Rundfunk case defines this as: “...*the adjective*  
4463 *‘necessary’...implies that a ‘pressing social need’ is involved and that the measure*  
4464 *employed is ‘proportionate to the legitimate aim pursued’.*”
- 4465 ○ A UK Court of appeals likewise suggests that necessary means “more than  
4466 desirable but less than indispensable or absolutely necessary.”
- 4467 • B&B suggests that a relevant factor to consider for necessity could be whether a  
4468 requestor has tried to make contact with the individual in any other ways (although this  
4469 may be inappropriate in the case of law enforcement requests).
- 4470 • B&B notes that the SSAD proposes to ask requestors to confirm they are requesting only  
4471 data that is necessary for their purpose.

Deleted: requester

Deleted: requester

4472 **2. Assessing the impact on the individual**

- 4473 • B&B says the EDPB suggests a range of factors to be considered when assessing the  
4474 impact on the individual:
- 4475 ○ **Assessment of impact.** Consider the direct impact on data subjects as well as  
4476 any broader possible consequences of the data processing (e.g., triggering legal  
4477 proceedings).
- 4478 ○ **Nature of the data.** Consider the level of sensitivity of the data as well as  
4479 whether the data is already publicly available.
- 4480 ○ **Status of the data subject.** Consider whether the data subject’s status increases  
4481 their vulnerability (e.g., children, other protected classes).
- 4482 ○ **Scope of processing.** Consider whether the data will be closely held (lower risk)  
4483 versus publicly disclosed, made accessible to a large number of persons, or  
4484 combined with other data (higher risk).
- 4485 ○ **Reasonable expectations of the data subject.** Consider whether the data  
4486 subject would reasonably expect their data to be processed/disclosed in this  
4487 manner.
- 4488 ○ **Status of the controller and data subject.** Consider negotiating power and any  
4489 imbalances in authority between the controller and the data subject.

- 4492 • It may be possible for the SSAD to take account of these factors, by identifying requests  
4493 that would pose a high risk for individuals so that those requests receive additional  
4494 attention.
- 4495 • A classic risk methodology (looking at severity and likelihood) can be used in assessing  
4496 risk.
- 4497 • This is not a purely quantitative exercise; while a request's metrics (e.g. number of data  
4498 subjects affected) is relevant, it is not determinative – a potentially significant impact on  
4499 a single data subject should still be considered.

### 4500 3. Provisional balance

- 4501 • Once legitimate interests of the controller or third party and those of the individual have  
4502 been considered, they can be balanced. Ensuring other data protection obligations are  
4503 met assists with the balancing but is not determinative (e.g., SSAD ensuring standard  
4504 contractual clauses in place with requestors regarding adequate protection of data is  
4505 helpful, because it perhaps reduces risk for individuals, but it is not determinative).

Deleted: requester

### 4506 4. Additional safeguards

- 4507 • B&B reports that if it's not clear how the balance should be struck, the controller can  
4508 consider additional safeguards to reduce the impact of processing on data subjects.
- 4509 • These include, for example:
- 4510 ○ Transparency
  - 4511 ○ Strengthened subject rights to access or port data
  - 4512 ○ Unconditional right to opt out
- 4513 • WP217, pp. 41-42, provides more details on safeguards that can help "tip the scales" in  
4514 favour of processing (here, in favour of disclosures), in legitimate interests balancing tes

**Annex: Legal Question 3: legitimate interests and automated submissions and/or disclosures**

a) Assuming that there is a policy that allows accredited parties to access non-public WHOIS data through a System for Standardized Access/ Disclosure of non-public domain registration data to third parties ("SSAD") (and requires the accredited party to commit to certain reasonable safeguards similar to a code of conduct), is it legally permissible under Article 6(1)(f) to:

- define specific categories of requests from accredited parties (e.g. rapid response to a malware attack or contacting a non-responsive IP infringer), for which there can be automated submissions for non-public WHOIS data, without having to manually verify the qualifications of the accredited parties for each individual disclosure request, and/or
- enable automated disclosures of such data, without requiring a manual review by the controller or processor of each individual disclosure request.

b) In addition, if it is not possible to automate any of these steps, please provide any guidance for how to perform the balancing test under Article 6(1) (f).

For reference, please refer to the following potential safeguards:

- Disclosure is required under CP's contract with ICANN (resulting from Phase 2 EPDP policy).
- CP's contract with ICANN requires CP to notify the data subject of the purposes for which, and types of entities by which, personal data may be processed. CP is required to notify data subject of this with the opportunity to opt out before the data subject enters into the registration agreement with the CP, and again annually via the ICANN- required registration data accuracy reminder. CP has done so.
- ICANN or its designee has validated the Requestor's identity, and required that the Requestor:
  - represents that it has a lawful basis for requesting and processing the data,
  - provides its lawful basis,
  - represents that it is requesting only the data necessary for its purpose,
  - agrees to process the data in accordance with GDPR, and
  - agrees to standard contractual clauses for the data transfer.
- ICANN or its designee logs requests for non-public registration data, regularly audits these logs, takes compliance action against suspected abuse, and makes these logs available upon request by the data subject.

**Question 4****Executive Summary:**

The EPDP Phase 2 team sent its first batch of questions to Bird & Bird on 29 August 2019. Bird & Bird answered this batch of questions in a series of three memos. [Memo 3](#) was delivered on 9 September 2019 and analyzes questions about the legal bases under which personal data contained in gTLD registration data could be disclosed to law enforcement authorities outside the data controller's jurisdiction.

Specifically, the memo responds to the following questions:

- Can a data controller rely on Article 6(1)(c) of the GDPR to disclose personal data to law enforcement authorities outside the data controller's jurisdiction?
- If not, may the data controller rely on any other legal bases, besides Article 6(1)(f) to disclose personal data to law enforcement authorities outside the data controller's jurisdiction?
- Is it possible for non-EU-based law enforcement authorities to rely on art 6(1)(f) GDPR as a legal basis for their processing? In this context, can the data controller rely on art 6(1)(f) GDPR to disclose the personal data? If non-EU-based law enforcement authorities cannot rely on art 6(1)(f) GDPR as a legal basis for their processing, on what lawful basis can non-EU-based law enforcement rely?

Overall, Bird & Bird advised that:

1. To apply Art 6(1)(c) there must be "Union law or Member State law to which the controller is subject" and this ground therefore has limited application where LEA is outside of the controller's jurisdiction.
2. Under the six lawful bases for processing personal data, Articles 6(1)(a) - Consent, 6(1)(b) - Contract, 6(1)(d) - Vital interests of a person, and 6(1)(e) - Public interest or official authority are not likely applicable for LEA requests.
3. Art 6(1)(f) - Legitimate interest, may be an applicable basis for the controller where a non-EU law enforcement authority makes a request to obtain personal data from a controller in the EU.
4. If a LEA is outside the EEA, their legal basis for processing under GDPR is not relevant as they are not subject to GDPR. Organizations disclosing to LEAs outside the EEA will still need a valid basis to do so, which will usually be legitimate interest in ICANN's case.
5. Where the CP is subject to GDPR but is located outside the EEA, they will also be subject to local law. This means that controllers may face a conflict of laws.

**1. Can a data controller rely on Article 6(1)(c) GDPR to disclose personal data to law enforcement authorities outside the data controller's jurisdiction?**

- Processing necessary for compliance with a legal obligation to which the controller is subject is only available where the legal obligation is set out in EU or Member State law.
- Where the controller is subject to disclosure obligations which arise from laws in jurisdictions outside the EU, the controller cannot rely on Art 6(1)(c).
- Controller may be subject to a legal obligation under EU or Member State law to disclose personal data to a non-EU law enforcement authority.
- MLATs may cover, but when a request comes in where an MLAT exists, the controller should deny the request and refer to the MLAT. Where no MLAT or other agreement exists, the controller needs to ensure that the disclosure to a third country would not be in breach of local law.

**2. May the data controller rely on any other legal bases, besides Article 6(1)(f) GDPR, to disclose personal data to law enforcement authorities outside the data controller's jurisdiction?**

- 6(1)(f) and 6(1)(c) may apply but the other five lawful bases for processing personal data likely not.
- Where a non-EU law enforcement authority makes a request to obtain personal data from a controller in the EU, the controller may be able to show a legitimate interest (6(1)(f)) in disclosing the data. The EDPB has also suggested this approach in correspondence to ICANN (e.g. EDPB-85-2018).

**3. Is it possible for non-EU-based law enforcement authorities to rely on Article 6(1)(f) GDPR as a legal basis for their processing? In this context, can the data controller rely on Article 6(1)(f) GDPR to disclose the personal data? If non-EU-based law enforcement authorities cannot rely on Article 6(1)(f) GDPR as a legal basis for their processing, on what lawful basis can non-EU-based law enforcement rely?**

- As entities of a country, law enforcement authorities are covered by state immunity and therefore non-EU-based law enforcement authorities are not subject to the GDPR.
- Even assuming the GDPR could apply to non-EU-based law enforcement authorities, it seems unlikely that law enforcement authorities outside the EU would consider justifying their processing under the GDPR.
- Non-EU-based law enforcement authorities therefore do not need to assess which GDPR legal basis they rely on for processing the data.

- A controller who transfers data to a LEA outside the EU will nevertheless need to consider how to meet the obligations in Chapter V (transfers of personal data to third countries or international organizations).

**Question 5 (Pseudonymized Email Addresses)**

Formatted: No underline

The group has discussed the option of replacing the email address provided by the data subject with an alternate email address that would in and of itself not identify the data subject (Example: 'sfjgsdafsafgkas@pseudo.nym'). With this approach, two options emerged in the discussion, where (a) the same unique string would be used for multiple registrations by the data subject ('pseudonymisation'), or (b) the string would be unique for each registration ('anonymization'). Under option (a), the identity of the data subject might - but need not necessarily - become identifiable by cross-referencing the content of all domain name registrations the string is used for.

From these options, the following question arose: Under options (a) and/or (b), would the alternate address have to be considered as personal data of the data subject under the GDPR and what would be the legal consequences and risks of this determination with regard to the proposed publication of this string in the publicly accessible part of the registration data service (RDS)?

**Bird & Bird's Summary Answer**

We think either option ((a) or (b)) would still be treated as the publication of personal data on the web. This would seem to be a case covered by a statement made in the Article 29 Working Party's 2014 Opinion on Anonymization techniques [ec.europa.eu]: "when a data controller does not delete the original (identifiable) data at event-level, and the data controller hands over part of this data set (for example after removal or masking of identifiable data), the resulting data set is still personal data." The purpose for making this e-mail address available, even though it's masked, is presumably to allow third parties to directly contact the data subject (e.g. to serve them with court summons, demand takedowns, etc.) – so it's quite clearly linked to that particular data subject, at least so far as ICANN/Contracted Parties are concerned. However, either option would be seen as a valuable privacy-enhancing technology (OPET) / privacy by design measure.

**Question 6 (Consent)**

Registration data submitted by legal person registrants may contain the data of natural persons. A Phase 1 memo stated that registrars can rely on a registrant's self-identification as legal or natural person if risk is mitigated by taking further steps to ensure the accuracy of the registrant's designation. As a follow up to that memo: what are the consent options and requirements related to such designations? Specifically: are data controllers entitled to rely on a statement obligating legal person registrants to obtain consent from a natural person who would act as a contact and whose information may be publicly displayed in RDS? If so, what representations, if any, would be helpful for the controller to obtain from the legal person registrant in this case?

As part of your analysis please consult the GDPR policies and practices of the Internet protocol (IP address) registry RIPE-NCC (the registry for Europe, based in the Netherlands). RIPE-NCC's customers (registrants) are legal persons being displayed publicly in WHOIS. RIPE-NCC places the responsibility on its legal-person registrants to obtain permission from those natural persons, and provides procedures and safeguards for that. RIPE-NCC states mission justifications and data collection purposes similar to those in ICANN's Temporary Specification. Could similar policies and procedures be used at ICANN?

Also see the policies of ARIN, the IP address registry for North America. ARIN has some customers located in the EU. ARIN also publishes the data of natural persons in its WHOIS output. ARIN's customers are natural persons, who submit the data of natural person contacts.

**Bird & Bird's Summary Answer**

This document analyses the consent requirements set out in the GDPR and examines consent options for the purpose of publishing in RDS personal data provided in the context of the registration of legal person registrants.

**Consent requirements**

Pursuant to the GDPR, consent must be freely given, specific, informed and unambiguous. Also, it needs to be obtained prior to the processing taking place. Controllers must be able to demonstrate that valid consent has been given and individuals have the right to withdraw consent at any time. Under the GDPR, the obligation to obtain consent lies with the controller. The controller may instruct a third party to obtain consent from individuals on its behalf; however, doing so will not relieve the controller from its obligations under the GDPR.

**Consent options**

On the basis of the above requirements, this document examines the following options of obtaining consent for making personal data public in RDS and sets out the compliance considerations of each option:

1. Controllers seek valid consent directly from individuals
  - Making personal data public in RDS is optional.
  - Prior to making personal data public, the controller contacts individuals directly to seek consent in line with the GDPR.
  - In the event of refusal to consent or failure to respond, the personal data will not be made public
2. Registrant obtains valid consent and provides evidence to controller
  - Making personal data public in RDS is optional.
  - Prior to making personal data public, the controller requires the registrant to:(a) obtain individuals' consent; and (b) provide to the controller evidence that consent has been obtained.
  - In the event of refusal to consent or failure to receive evidence, the personal data will not be made public
3. Registrant obtains valid consent and controller confirms this with the individual
  - Prior to making personal data public, the controller requires the registrant to:(a) obtain individuals' consent; and (b) provide to the controller evidence that consent has been obtained.
  - Controller follows up with the individual directly: it informs them that the registrant has confirmed they have granted consent.
4. Registrant undertakes the obligation to obtain consent
  - Registrants are allowed to provide non-personal contact details.
  - Registration data is made public by default (irrespective of whether or not personal data is included).
  - By means of a statement, registrants undertake to ensure they have obtained individuals' consent if they choose to provide personal data.

**Question 7 (Accuracy)**

## Question 1a

Who has standing to invoke the Accuracy Principle? We understand that a purpose of the Accuracy Principle is to protect the Data Subject from harm resulting from the processing of inaccurate information. Do others such as contracted parties and ICANN (as Controllers), law enforcement, IP rights holders, etc. have standing to invoke the Accuracy Principle under GDPR? In responding to this question, can you please clarify the parties/interests that we should consider in general, and specifically when interpreting the following passages from the prior memos:

- Both memos reference “relevant parties” in several sections. Are the “relevant parties” limited to the controller(s) or should we account for third-party interests as well?
  - “There may be questions as to whether it is sufficient for the RNH or Account Holder to confirm the accuracy of information relating to technical and administrative contacts, instead of asking information of such contacts directly. GDPR does not necessarily require that, in cases where the personal data must be validated, that it be validated by the data subject herself. ICANN and the relevant parties may rely on third-parties to confirm the accuracy of personal data if it is reasonable to do so. Therefore, we see no immediate reason to find that the current procedures are insufficient.” (emphasis added) (Paragraph 19 – Accuracy)
  - “In sum, because compliance with the Accuracy Principle is based on a reasonableness standard, ICANN and the relevant parties will be better placed to evaluate whether these procedures are sufficient. From our vantage point, as the procedures do require affirmative steps that will help confirm accuracy, unless there is reason to believe these are insufficient, we see no clear requirement to review them.” (emphasis added) (Paragraph 21-Accuracy)
  - “If the relevant parties had no reason to doubt the reliability of a registrant's self-identification, then they likely would be able to rely on the self-identification alone, without independent confirmation. However, we understand that the parties are concerned that some registrants will not understand the question and will wrongly self-identify. Therefore, there would be a risk of liability if the relevant parties did not take further steps to ensure the accuracy of the registrant’s designation.” (emphasis added) (Paragraph 17 –Legal v. Natural)

1.b Similarly, the Legal vs. Natural person memo refers to the “importance” of the data in determining the level of effort required to ensure accuracy. Is the assessment of the “importance” of the data limited to considering the importance to the data subject and the controller(s), or does it include the importance of the data to third-parties as well (in this case law enforcement, IP rights holders, and others who would request the data from the controller for their own purposes)?

- “As explained in the ICO guidance, “The more important it is that the personal data is accurate, the greater the effort you should put into ensuring its accuracy. So if you are using the data to make decisions that may significantly affect the individual concerned or others, you need to put more effort into ensuring accuracy.” (Paragraph 14 –Legal vs. Natural)

### **Bird & Bird’s Executive Summary**

This document examines further considerations in relation to the Accuracy Principle (the parties with the obligation to comply with this principle, persons that have the standing to invoke it, and the basis on which data accuracy is to be assessed). It sets out the factors to be considered when assessing data accuracy and provides recommendations of measures to enhance the accuracy of registration data held by contracted parties.

#### Parties subject to Accuracy Principle and “relevant parties”

The obligation to comply with the GDPR’s Accuracy Principle lies with the controller(s). References to “relevant parties” in the Accuracy and the Legal vs. Natural memos were to the relevant controller(s) of WHOIS data.

#### Parties having the right to invoke the Accuracy Principle

The GDPR provides for a range of remedies: complaints to supervisory authorities, judicial remedies and right to compensation from a controller or processor. Data subjects (and where allowed by national law, their representatives) have the right to exercise all remedies set forth in the GDPR. In some instances, these rights may also be exercised by other – natural or legal- persons, for example, those affected by the decision of a supervisory authority or those suffered damage as a result of an infringement of the GDPR.

#### Interests of various parties when considering accuracy

The purpose for which personal data is processed is relevant to determining the measures required to ensure data accuracy. The data subject’s interests must be taken into account when assessing data accuracy. In some circumstances, the controller’s interests will also be relevant. Although there are a few references to rights of “others” in ICO’s accuracy guidance, this point is not illuminated further in our review of guidance, case law or literature. Given the lack of guidance, we do not recommend placing too much emphasis on this point.

#### Reasonable measures for data accuracy

The Accuracy Principle has not been extensively examined in literature and case law and references to it are limited. The reasonable and appropriate character of accuracy measures should be considered in the light of the GDPR’s risk-based approach, taking into account,

among other things, the purpose and impact of processing. A list of suggested accuracy measures is set out in this document.

**Question 8 (Automation Use Cases)****Background**

Formatted: No underline

1. Under the first scenario, the automation would be carried out within a Central Gateway tasked with receiving requests from accredited users. The Central Gateway would make an automated recommendation on whether or not the requested data should be disclosed whilst the ultimate decision of disclosing data would rest with the Contracted Parties, which could either follow the recommendation or not (Scenario 1.a.). Contracted Parties with enough confidence in the Gateway may choose to automate the decision to disclose the data (Scenario 1.b.).

2. Under the second scenario, the decision to disclose the registrant data would be taken by the Central Gateway without the Contracted Party being able to review the request. The Central Gateway would take this decision either (i) after obtaining the relevant data from the Contracted Party and evaluating the data as part of its decision-making (Scenario 2.a.), or (ii) without obtaining the registrant data (in which case, the decision would be based solely on information about the Requestor and the assertions made in the request) (Scenario 2.b.). One example given of the latter scenario would be automated disclosure of registration data for microsoft-login.com to the verified owner of the trademark MICROSOFT, in response to a request alleging trademark infringement and asserting intent to process the data for the establishment, exercise or defence of legal claims. We have been asked to assume that each scenario would be subject to a set of safeguards which are included in this memo as Appendix 1.

**A. Use cases under Scenario 1:**

In light of the advice previously provided in the memos on Question 1&2 (Liability) and Question 3 (Automation), please provide the following analysis for each use case in Exhibit 1:

1. Please describe the risk of liability for the Central Gateway and Contracted Parties (“CPs”) related to automating this recommendation, and to automating the decision to disclose personal information to a third-party. If there is additional information required to assess the risk, please note the additional information needed.

2. Is the decision to disclose personal information to a third-party a decision “which produces legal effects concerning [the data subject] or similarly significantly affects him or her” within the scope of Article 22?

Deleted:

3. Are there additional measures or safeguards that would mitigate the risk of liability?

4. Does automated decision-making performed in this manner impact your analysis on the roles/liability of the parties described in the Question 1&2 memo (e.g., Contracted Parties

remain controllers with liability where “disclosure takes place in an automated fashion, without any manual intervention.” 1.1.4).

B. Use cases under Scenario 2:

In the second -alternative- scenario, where the Central Gateway has the contractual ability to require the Contracted Parties to provide the data to the Central Gateway:

1. How do the alternative scenarios impact the analysis provided in Questions 1 through 4 above?
2. Which scenario involves the least risk of liability for Contracted Parties? In responding to this, please state your assumptions regarding the respective roles of ICANN and contracted parties, including a scenario where the Centralized Gateway has outsourced decision making to an independent legal service provider.

C. Additional automation clarifications

1. If the decision to disclose personal data to a third party is automated, in what manner must the Controller(s) provide the registrant with information concerning the possibility of automated decision-making in processing of his or her personal information? How should this information be communicated to the registrant, and what information pertaining to the automated decision-making must be communicated to the registrant in order to ensure fair and transparent processing pursuant to Article 13?
2. Does the provision of the information in the answer to question C.1 above by the Controller(s) affect the registrant’s right to obtain confirmation as to whether or not automated decision-making to disclose their personal information to a third-party has taken place? Does it affect the registrant’s right to obtain associated meaningful information as per Article 15.1(h)?
3. Does the manner in which the decision making is performed above impact the way in which this information must be provided?
4. What role does proximate cause play in determining whether a decision to disclose produces a legal or similarly significant effect (i.e. how related must the decision to disclose a registrant’s personal data be to the ultimate legal or similarly significant effect of personal data processing)? Please describe the risk of liability to the Central Gateway or Contracted Party if, after receiving personal data, the Requestor engages in its own processing which has a legal or similarly significant effect.
5. In Section 1.12 in the previous memo on Automation, Bird & Bird stated: It may also be possible to structure the SSAD so that it does not involve “a decision based solely on automated processing”. To expand, rather than the SSAD requesting information from requesters and

evaluating if the relevant criteria for release of non-public registration data are met, the SSAD could publish the categories of requests which will be accepted and ask Requestors to confirm that they meet the relevant criteria. In this case, there would be no automated processing leading to a decision to release the data. The SSAD could ask requesters to provide additional information about the nature of their request for audit purposes –but it would not be used to evaluate the request itself. Could you please elaborate on how (i) publishing the categories of requests that will be approved and (ii) requiring a Requestor to manually select the applicable category and confirm that they meet the criteria for that category of requests would make the decision to disclose “not automated”?

### **Bird & Bird’s Executive Summary**

This document examines the scenarios and use cases presented by the EPDP Team in relation to automated decisions for disclosure of non-public registrant data. It identifies the cases of fully automated decisions that would fall under the scope of Art. 22 GDPR, challenges associated with Art. 22 and available alternatives. The document further suggests data protection safeguards and examines transparency considerations in the SSAD context. Finally, it examines the status of the parties under each scenario and the associated risk of liability.

Formatted: No underline

### **Art. 22 decisions and alternatives**

Art. 22 GDPR applies to fully automated decisions which produce legal or similarly significant effects. Art. 22 decisions are only allowed in limited cases, which are not likely to apply to the SSAD context. Fully automated decisions will only be allowed if they: (a) do not include the processing of personal data; (b) do not produce legal or similarly significant effects; (c) are authorised by applicable EU or Member State law which lays down suitable measures to protect individuals; or (d) are covered by a national derogation from Art. 22 (for example, for the purpose of detection of criminal offences). In all other cases, there needs to be meaningful human involvement in the decision making process.

### **Do Art. 22 criteria apply to SSAD?**

(a) Solely automated processing: For Art. 22 to apply, there needs to be some processing of personal data, but there is no requirement that only personal data is processed for the decision. The decision examined here will in most cases involve the processing of personal data – this will be the case irrespective of whether or not the Central Gateway has access to the requested data and takes account of such data in the decision making. Apart from Scenario 1.a where the SSAD would only issue an automated recommendation, all other scenarios would include a decision (to disclose registrant data to third parties) based solely on automated processing.

(b) Legal or similarly significant effect: the term is not defined in the GDPR; however, it indicates an elevated threshold. Whether or not the disclosure of registrant data has such an

effect, will depend on the circumstances of the request: the document assesses the nature of the effects of disclosure under each use case. We have given clear yes and no answers where possible: some use cases would benefit from further discussion. The role of proximate cause in determining the effects of a decision has not been examined by courts or supervisory authorities. There is some discussion in German literature; however, given the lack of wider discussion, the views of supervisory authorities on this topic could be useful, as this may permit automation of the SSAD on the basis that the Central Gateway/CPs are only taking a preparatory decision.

### Safeguards

A list of suggested data protection safeguards is set out in Appendix 2 of this document. This includes among other things: engaging with supervisory authorities, clearly scoping each use case and establishing a legal basis, imposing appropriate terms of disclosure on the Requestor, implementing appropriate security measures, taking measures to comply with the accountability principle, establishing policies for satisfying individuals' rights, and entering into appropriate data protection clauses with processors.

### Transparency

Formatted: No underline

The manner of providing information is not affected by the existence of automated decision making; but the content of the information is.

- The information will typically be provided through the privacy notice; given the importance of the SSAD in the Domain Name system, it would be appropriate to present it in a prominent manner.
- It would be most efficient for registrars to provide the relevant information (given their direct relationship with registrants), irrespective of whether not they are considered controllers in the SSAD context. If they are not controllers, but provide the information on behalf of the controller, this should be made clear to registrants.
- In terms of the content, for Art. 22 decisions only, the notice must also include information about: the existence of automated decision, the logic involved and the significance and envisaged consequences of the processing.
- The elements of Art. 15 GDPR (right of access) need to be provided on request even if they have already been included in the notice.
- The right of access requires controllers to provide information on the recipients to whom the data "have been or will be disclosed": this indicates that, absent applicable exemptions, registrants exercising their right of access must be informed about disclosures of their data to third parties.

### Status of parties

(a) Under Scenario 1, the ultimate decision to disclose registrant data rests with the CPs. The analysis carried out in the Liability memo would also apply here and most likely CPs would be considered by supervisory authorities as joint controllers along with ICANN.

(b) Under Scenario 2, the situation is less clear. Depending on whether a macro-or micro-level approach is adopted, the CPs may be found to be (joint) controllers for the automated decision making and the disclosure of data to Requestors or merely for the disclosure of data to the Central Gateway. We think the second option (controllers just for the disclosure of data to the Central Gateway) is the better analysis, but the point is not clear. The outsourcing of the decision making to an independent legal service provider would be unlikely to alter the above position.

In both scenarios, it would not be plausible to argue that CPs are processors.

Liability of CPs is examined in respect of:

(a) status of CPs: where CPs are joint controllers, it is important to clearly allocate tasks and responsibilities by means of an agreement;

(b) type of liability:

- Liability towards individuals: the rule is joint and several liability and CPs can be held liable for the entire damage caused by processing they are involved in, irrespective of their status. They can only avoid this by demonstrating that they were not in any way involved in the event giving rise to the damage. Otherwise, they have the right to claim back from the other controllers the part of compensation corresponding to their responsibility.
- Liability to supervisory authorities: joint and several liability is less clear here and there is scope to argue that enforcement action should be imposed based on the "degree of responsibility" of the party.

In terms of risk, Scenario 2 seems to present lower risk of liability both in respect of compensation to individuals and of enforcement action by supervisory authorities.
