

WS2 Recommendations - GNSO Prioritization

The purpose of the prioritization exercise is for the GNSO Council small team to identify a subset of WS2 recommendations that:

1. The GNSO Council has the responsibility to implement;
2. The broader GNSO Community (i.e., GNSO Stakeholder Groups and Constituencies) has the responsibility to implement
3. The broad ICANN community, including the GNSO, has the responsibility to implement in a collaborative manner.

The outcome of the small team's exercise is to be considered by the GNSO Council.

As several other ICANN community groups, including each individual GNSO Stakeholder Group and Constituency, are responsible for their own prioritization exercise of the WS2 recommendations, the GNSO Council small team's primary focus is to identify the WS2 recommendations that are relevant to the GNSO Council, and assess their respective priority level for implementation. **These recommendations are highlighted in YELLOW.** The small team also suggested priority levels for some recommendations NOT directly relevant to the GNSO Council; however, the ultimate assessment should be determined by the impacted ICANN community groups.

The small team defined the priority level based on their assessment of the **level of importance**. For example, some "high" priority recommendations are rated "high" due to their significance; they may have already been implemented by the Council to certain extent, so the "high" priority does not necessarily reflect the level of effort or level of urgency required for implementation.

Instruction:

- Please insert **[x]** in the cells to indicate which entity you believe that has the responsibility to implement a specific WS2 recommendation (i.e., GNSO Council, GNSO SGs/Cs, ICANN Community, and/or ICANN org).
- If you believe an entity other than the ICANN community or the ICANN org has the responsibility to implement a certain WS2 recommendation, you can leave the cells blank.
- Please also write "low", "medium", or "high" to indicate the priority level of implementing a specific recommendation.

Note: first column indicates the row numbers under each topic, not the recommendation numbers. Some recommendations contain sub sections.

Topic 1. Improve Diversity

Summary: Recommends the community to agree on a definition of diversity, identify the elements of diversity that are in their charter, assess diversity within their structures and publish this information. Diversity assessments and publications should be conducted on a regular schedule moving forward.

1	1.1 SO/AC/Groups should agree that the following seven key elements of diversity should be used as a common starting point for all diversity considerations within ICANN: <ul style="list-style-type: none"> - Geographical/Regional Representation - Language - Gender - Age - Physical Disability - Diverse Skills - Stakeholder Group or Constituency 			X		Medium to High	Board is waiting for the community to agree. Cross-community work of some type would be needed. Standardised reporting template is needed. Up to the ICANN community to decide on the priority level.
2	1.2 Each SO/AC/Group should identify which elements of diversity are mandated in their charters or ICANN Bylaws and any other elements that are relevant and applicable to each of its levels		X			Medium	Current SG Charters include geo diversity & non-discrimination.

	including leadership (Diversity Criteria) and publish the results of the exercise on their official websites.						Up to GNSO's SGs/Cs to decide on the priority level.
3	1.3 Each SO/AC/Group, supported by ICANN staff, should undertake an initial assessment of their diversity for all of their structures including leadership on their Diversity Criteria and publish the results on their official website.		X			Medium	Up to GNSO's SGs/Cs to decide on the priority level.
4	1.4 Each SO/AC/Group should use the information from their initial assessment to define and publish on their official website their Diversity Criteria objectives and strategies for achieving these, as well as a timeline for doing so.		X			Medium	Up to GNSO's SGs/Cs to decide on the priority level.
5	1.5 Each SO/AC/Group, supported by ICANN staff, should undertake a regular update of their diversity assessment against their Diversity Criteria and objectives at all levels including leadership. Ideally this		X			Medium	Up to GNSO's SGs/Cs to decide on the priority level.

6	1.6 ICANN staff should provide support and tools for the SO/AC/Groups to assist them in assessing their diversity in an appropriate manner. ICANN should also identify staff or community resources that can assist SO/ACs or other components of the community with diversity-related activities and strategies.				X		Up to ICANN org to decide on the priority level.
7	1.7 ICANN staff should support SO/AC/Groups in developing and publishing a process for dealing with diversity-related complaints and issues.				X		Up to ICANN org to decide on the priority level.

Topic 2. Guidelines for Standards of Conduct Presumed to be in Good Faith Associated with Exercising Removal of Individual ICANN Board Directors

Summary: Recommends guidelines for petitioning and considering the removal of board members including a standard framework be developed and used to raise the issue of Board removal to the respective body. More broadly, it also asks that these guidelines for engaging discussions around Board removal could be adopted as a universal standard given that they are broad enough to encompass any discussion.

X		X		Medium to High	<p>The prioritization level of implementing this recommendation is to be discussed by the GNSO Council.</p> <p>We have the ICANN bylaw that is in force: when the WS1 was adopted, the bylaw was made dormant on the basis that it creates risks for lawsuits for ICANN until the community knows how to interpret the bylaw. But the framework of interpretation left a lot to the ACs/SOs for implementation, and GNSO must adhere to the bylaw and the framework. This is one of the highest priorities here because we need to figure out how to assess the human rights impact of the GNSO policies.</p>

<p>Topic 4. Jurisdiction</p> <p><i>Summary: Recommends ICANN to better support applicants from sanctioned countries by using its best efforts to apply for OFAC licenses to support them, to be clear about the process, and clearly communicate progress to applicants. In addition ICANN should also explore various tools to remind registrars to understand the applicable laws under which they operate and to accurately reflect those laws in their customer relationships. ICANN should also assess and potentially pursue general licenses to cover transactions integral to ICANN’s role in managing the DNS and contracts for Internet resources to enable individual transactions to proceed without the need for specific licenses. This recommendation also asks the organization, the GNSO, and the contracted parties to assess and consider possible changes to the RA and RAA to include several choice of law provisions. Finally, the recommendation asks to develop a msm for further discussions of several outstanding jurisdiction-related concerns that remain.</i></p>

For ICANN to enter into a Registration Accreditation Agreement (RAA) with an applicant from a sanctioned country, it will need an OFAC license. Currently, “ICANN is under no obligation to seek such licenses and, in any given case, OFAC could decide not to issue a requested license.” This uncertainty could discourage residents of sanctioned countries from applying for accreditation. The sub-group recommends that the above sentence should be amended to require ICANN to apply for and use best efforts to secure an OFAC license if the other party is otherwise qualified to be a registrar (and is not individually subject to sanctions). The Applicant Guidebook (AGB) states: "In the past, when ICANN has been requested to provide services to individuals or entities that are not SDNs (specially designated nationals) but are residents of sanctioned countries, ICANN has sought and been granted licenses as required. In any given case, however, OFAC could decide not to issue a requested license." It appears that some non-U.S.-based registrars might be applying OFAC sanctions with registrants and potential registrants, based on a mistaken assumption that they must do so simply because they have a contract with ICANN. Non-U.S. registrars may also appear to apply OFAC sanctions, if they “cut and paste” registrant agreements from U.S.-based registrars. This regulatory process may be a significant undertaking.</p> <p>The sub-group recommends that ICANN take steps to pursue one or more OFAC “general licenses.” ICANN should first prioritize a study of the costs, benefits, timeline and details of the process. ICANN should then pursue general licenses as soon as possible, unless it discovers significant obstacles. If so, ICANN should report this to the community and seek its advice on how to proceed. These are standard-form contracts that are not typically negotiated; changes are now determined through an amendment procedure (e.g. Art. 7.6 of the RA). The sub-group understands that it cannot require ICANN to make amendments to the RA or the RAA. Rather, this recommendation suggests possible changes to the RA and RAA for study	X	X		X	Medium	<p>Contracted Parties need to consider if they are prepared to enter into negotiations to amend base RA/RAA.</p> <p>Coordination among the GNSO Council/SGs/Cs may be needed for implementing this recommendation. The body of the report discusses the advantages and disadvantages of each approach.</p> <p>4.2.1.1 Menu Approach. The sub-group supports a “Menu” approach, where the governing law would be chosen before the contract is executed from a “menu” of possible governing laws. The menu needs to be defined; this could best left to ICANN and the registries. The sub-group discussed a</p>

The sub-group has not determined what the menu items should be, but believes there should be a balance between the advantages and disadvantages of having different governing laws apply to the same base RA, which likely suggests having a relatively limited number of choices on the menu. The sub-group recommends that the Registry choose from among the options on the menu (i.e., the choice would not be negotiated with ICANN).</p> <p>4.2.1.2 "California" (or "fixed law") Approach. A third possible option would be a “Carve-Out” approach, whereby parts of the contract that would benefit from uniform treatment are governed by a uniform predetermined law (e.g., California) and other parts are governed either by the law of the registry’s jurisdiction or by a jurisdiction chosen using the “Menu” approach.</p> <p>4.2.1.4 Bespoke Approach. In the “Bespoke” approach, the governing law of the entire agreement is the governing law of the Registry Operator.</p> <p>4.2.1.5 Status Quo Approach. A fifth possible approach is to retain the status quo, (i.e., have no “governing law” clause in the RAA).</p>

	<p>4.2.2 Choice of Law Provisions in Registrar Accreditation Agreements. The options for the RAA are essentially the same as for the RA.</p> <p>4.2.3 Choice of Venue Provisions in Registry Agreements. Under the RA, disputes are resolved by “binding arbitration,” pursuant to ICC rules. The RA contains a choice of venue provision stating that the venue is Los Angeles, California as both the physical place and the seat of the arbitration. When entering into contracts with registries, ICANN could offer a list of possible venues for arbitration rather than imposing Los Angeles, California. The registry that enters into a registry agreement with ICANN could then choose which venue it prefers at or before the execution of the contract.</p>

There were a number of concerns raised in the sub-group where the sub-group had substantive discussions but did not get to a point of conclusion. As an example, there were discussions of limited, partial, relative, or tailored immunity for ICANN that did not come to conclusion. These concerns were put on the table by different stakeholders, and for these stakeholders, these are legitimate concerns. As these concerns were not discussed to the end, there should be a path forward for these concerns beyond the CCWG-Accountability, which was tasked to look into a limited number of issues within a limited period of time and with a limited budget.</p> <p>Therefore, the sub-group suggests that another multistakeholder process of some kind should be considered to allow for further</p>			X		Medium	<p>This recommendation was critical to GAC support of the WS2 Final report. Topic 6. Increase SO/AC Accountability

Summary: Recommends SO/AC/Groups document their decision-making methods, procedures for members to challenge the process, report annually what they have done for the year to improve accountability. Transparency should be provided by publishing SO/AC transparency and accountability (policies, procedures, and documented practices), Charter and operating guidelines, lists of members and officers, records of meetings, correspondence. Rules of eligibility and criteria for membership should be clearly outlined in the bylaws or in operational procedures. Each SO/AC/Group should support engagement by publishing newsletters and other communications, maintaining a site/wiki, and create a committee to support outreach/engagement strategy. Each SO/AC/Group should review its policies and procedures at regular intervals and make changes to operational procedures and charter as indicated by the review

Topic 7. Improve Staff Accountability

Summary: Recommends ICANN publish description of performance management system, how departmental goals map to ICANN's strategic goals and objectives, clarification of complaints / ombuds office, organization policies related to WS2, ICANN organization delegations, and guidelines regarding the development of staff reports for Public Comments, or staff response to Community correspondence. ICANN should assess communication strategy to improve understanding of accountability mechanisms. ICANN org should better ascertain its overall performance and accountability to relevant stakeholders and make results available to community. ICANN org should standardize and publish guidelines for appropriate timeframes for acknowledging requests made by the community. Finally, The ICANN Organization should work with the community to develop and publish service level targets and guidelines (similar to the Service Level Agreement for the IANA Numbering Services) that clearly define the services provided by ICANN to the community as well as the service level target for each service.
