

NCAP Discussion Group Weekly Meeting - 11th August 2021

AGENDA:

1. Welcome and roll call
2. Action Item review
3. Analysis of DITL 2020 data from a data sensitivity perspective (Matthew Thomas)
4. AOB

DISCUSSION:

2. Action Item review

No outstanding action items

3. Analysis of DITL 2020 data from a data sensitivity perspective (Matthew Thomas)

Matthew Thomas presented the analysis of DITL 2020 data from a data sensitivity perspective. Unfortunately, the DITL 2021 data isn't available yet on the DNS OARC platform so the analysis was based on the data from 2020. The conclusion is that going forward, the properties we have seen looking at DITL 2020 showed an even distribution of top traffic and top NXDomain TLDs that cross the root server identities. Therefore, picking a random route letter is probably going to be a good and representative sample for the future analysis.
