Joint Meeting: GAC and the ALAC

Hadia Elminiawi

ICANN72

26, October 2021

Agenda

- The global public interest from an ICANN perspective
- Decision making framework and board GPI framework
- The global public interest in the context of WHOIS and ICANN
- Questions?

The global public interest from an ICANN perspective

The Global Public Interest:

- is linked to ICANN's mission and the operational stability of the Internet
- is context driven
- is determined by the multistakeholder model through a bottom-up multistakeholder community process

Decision making framework and board GPI framework

Broad ICANN Category	Public Interest Categories
ICANN's technical coordination	Stable, Secure, Open, Resilient, Interoperable
ICANN's role in the DNS marketplace	Competitive, Fair, Trusted
Benefit to the Internet community	Beneficial
ICANN's global multistakeholder community and policy development policies	Diverse, Respectful, Inclusive, Innovative, Transparent, Open, Balanced
ICANN's policies and practices	Neutral, Objective, Responsive, Accountable, Sustainable, Fair, Fiscally Responsible

The current framework
- helps determine how recommendations/decisions meet the public Interest
- is not part of the process through which decisions/recommendations are made
- may be used in parallel to existing processes

Table source: ICANN72 prep week - The Global Public Interest at ICANN - An Update

The global public interest in the context of WHOIS and ICANN

- To what extent did we consider the GPI in drafting our recommendations?

- Could the existing framework be utilized during deliberations as opposed to after decisions and recommendations have been made?

- Balancing tests would be required to evaluate the public interest categories.

WHOIS ICANN Category	Public Interest Categories
ICANN's technical coordination	Stable, Secure, Resilient
Benefit to the Internet community	Beneficial
ICANN policies and practices	Neutral, objective, responsive, accountable, sustainable, fair, fiscally responsive

Public Interest categories are driven from ICANN Bylaws

Questions?

Thank you
