

ICANN 73

Summary Report by Eduardo Díaz

“Blockchain & Decentralization of Domain Names”

THE NEW NARALO
MONTHLY CALLS PRESENTS
AT ICANN 73

BLOCKCHAIN, NFT'S, AND DECENTRALIZED DOMAINS

THE IMPACT ON END-USERS, INTERNET
SECURITY AND STABILITY, AND ICANN

Presenters

Jeff Neuman (jjnsolutions.com)

Tom Barrett (encirca.com)

Moderator: Glenn McKnight

MARCH 8, 2022
DOOR OPENS AT 16:30 UTC* (90 MIN)

The emergence of Blockchain technology has spawned countless DNS variants along with new top-level domain namespaces and alternative roots. All of this activity is happening outside of ICANN's oversight and regulatory framework. How does this impact the Internet and what role should ICANN have vis-a-vis these decentralized domain names?

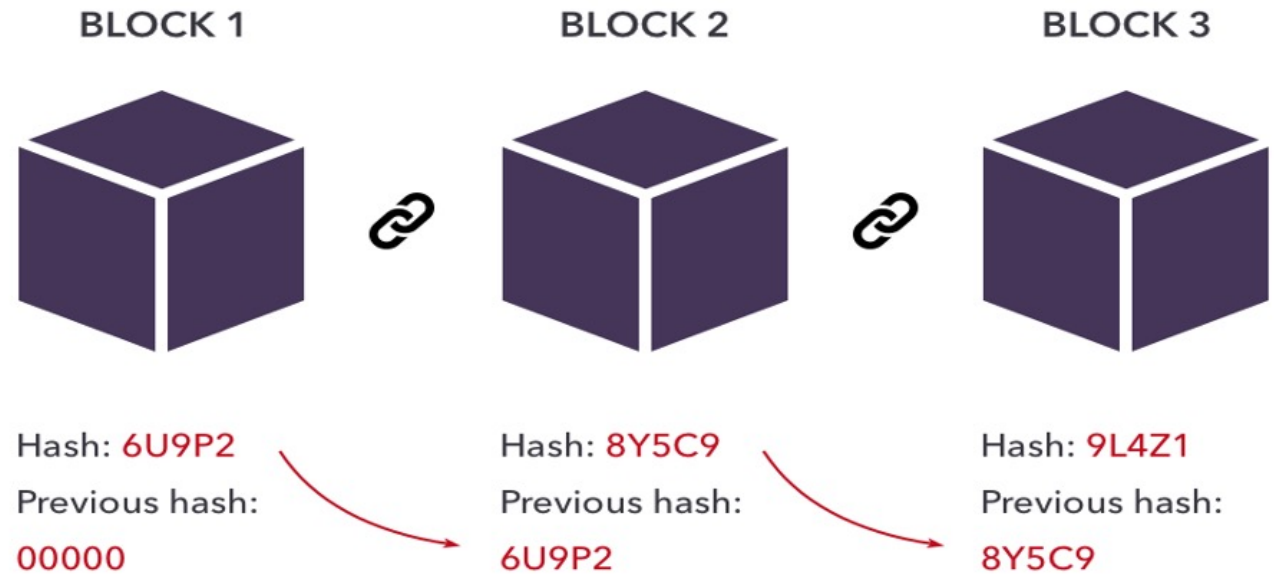

Panelists Tom Barrett (encirca.com) and Jeff Neuman (jjnsolutions.com) will present an overview of NFT's and decentralized domain names and discuss the implications for end-users, internet security and stability, and ICANN.

My Take

We, the ICANN Community, should start exploring how the current DNS should interact with this new technology.

What is Next

A practical exercise
Coming up this Summer!
