

**6 April 2023**

**RSSAC Caucus RSSAC001v2 Work Party Teleconference#12 Chat Transcript**

18:01:21 From Wes Hardaker to Everyone:  
and me!

18:01:32 From Wes Hardaker to Everyone:  
(sorry I'm late)

18:02:27 From Ozan Sahin - ICANN Org to Everyone:  
Welcome, Wes. And I see Shinta Sato joined the call. Welcome, Shinta!

18:08:12 From Marc Blanchet to Everyone:  
IMHO, delete the sentence or put "https"

18:30:06 From Marc Blanchet to Everyone:  
Maybe just remove "such as ..."

18:34:45 From Marc Blanchet to Everyone:  
Maybe say: "such as the information listed in section 3.6"

18:36:36 From Robert Story to Everyone:  
Reacted to "Maybe say: "such as ..." with 👍

18:47:29 From Wes Hardaker to Everyone:  
- SHOULD respond to queries that include an NSID [RFC5001] EDNS(0) option with an identifier that is unique for each instance. At the time this document is published, each root server operator deploys multiple instances, so the instance identifier for the NSID response SHOULD include a sub-string that identifies the root server operator. The identifier is only useful for debugging and does not necessarily indicate any attribute of the instance that is responding.

19:00:45 From Lars-Johan Liman to Everyone:  
I think Marc has a point here. Only change the RFC if its wrong,

19:00:59 From Marc Blanchet to Everyone:  
Reacted to "I think Marc has a p..." with ❤️

19:01:24 From Ken Renard to Everyone:  
add ❤️

19:01:26 From Ken Renard to Everyone:  
remove ❤️
