OSC – GNSO - Working Group – Vanda Scartezini - November 2009.

The OSC have received the final CCT (Communications and Coordination Team) recommendation on report and after several interactions some comments were made in order to ask the CCT to add some more effort related to some important issues.

 The final report should be divided into 2 separated issues: a) technology improvements and b) all other communication & coordination improvements.

The final report did a very good recommendations on the Technology part, but there are a lack of recommendation related to some main issues we have suggest a small review from them in order to send to staff to deeply detailed and implement the recommendations

 Important Points deserving a review: Document Management / Cross AC-SO communications / Board communication among others

I do believe we can add some suggestion on how to improve Cross AC-SO communications.
