

Registrant verification in .CZ

ICANN79 ALAC Plenary

Past

- 2006 – On demand verification via registered letters
 - Based on complaints or suspicious registration selected by scanner
- 2010 – MojeID – digital identity service
 - Built on the base of registry contact database, recognized by government for access to governmental services and notified for LoA high according eIDAS regulation
- 2019 – RegeID – linking verification with eIDAS
 - Joint EU project of 4 ccTLDs (.CZ, .EE, .DK, .NL) to explore the world of EU eIDs
- 2023 – Self service verification portal with verification method selection
 - Scaling up verification procedure to handle more cases

Future

- Integration with online registries
 - Street address registry
 - Company registry
- European Digital Identity Wallet
 - Part of Large Scale Pilots to embrace new distributed identity technology
- Introduce additional verification methods
 - Mainly for registrants that do not possess eID
- Verification as mandatory requirement or voluntary (incentivized) feature?
 - Cheaper domains? Additional value like domain ownership digital credential?
