The Registration Data Request Service

A free and global proof of concept service that will handle requests for access to nonpublic registration data related to gTLDs.

Connects requestors seeking disclosure of nonpublic registration data with the relevant ICANN-accredited registrars for gTLD domain names who are participating in the service.

Use of the system by ICANN-accredited registrars is **voluntary**.

How Will the Service Work?

The process for submitting and receiving requests for nonpublic gTLD registration data for requestors and ICANN-accredited registrars is now streamlined through using a single platform.

Requestors will fill out a standardized form for each disclosure request.

Participating registrars will determine if the requestor has a legitimate interest for the information.

Benefits for Requestors

Cybersecurity | Government Officials | Intellectual Property Professionals | Law Enforcement Authorities

- Potential to be a one-stop shop for nonpublic gTLD registration data requestors that will provide a more consistent/standardized way to request data.
- Makes it easier and faster for requestors to find the right registrar for their domain name query as the service will do it automatically.
- Only need to complete one standard form through one service instead of filling out various forms managed by different registrars.
- One place to upload needed documentation like court orders, subpoenas, credentials, legal affidavits, etc.
- Requestors can see pending and past requests in one place.
- Can create new requests, use templates, and cancel requests.
