

ccNSO Relevance to Wider ICANN Community

ROUND 1

- Put the “multi” in multistakeholder model
- Non-competitive environment enables diversity to flourish - all in it together
 - Same basic values and function
- Bring a big picture POV
- Bring specific value to ICANN - input of ICANN org strategic planning for example - that other groups build upon
- Participate in order to:
 - Share information
 - Engage in cooperative activities to prevent/support against malicious attacks
 - Engage in technical collaboration

ROUND 2

- Change is easier than those bound the RAA - we can be creative to find solutions
- Conduit to the sovereign without being a representative of that government
 - Conduit of information back and forth
 - More senior individuals are usually found in the cc community vs. governments often sending more junior delegates
- Should the ccTLD community consider a joint document (like the GAC Communique)?
 - Perhaps something that is shared annually or bi-annually

ROUND 3

- There is a lot to be learned from ccTLD community regarding the next round of new gTLDs - we want to share that knowledge and help prevent pitfalls
 - There are opportunities for improvement here
- There is a gap in taking the ccTLD knowledge and sharing that into the broader community - we need more channels to share our knowledge - it is relevant beyond just the ccTLD community
- Joint spirit of improvement
