# Today - Canadian Presence Challenge
Not Privacy Preserving

- When a domain registrants' Canadian Presence is challenged today, the compliance team reaches out to the individual in question by email to obtain digital copies (scan's) of proof of citizenship (passport) and/or driver's licence.

- Humans lack the ability to identify fraudulent scanned credentials

Planning - Digital Credentials Presentations
Privacy Preserving

- Verified digital credentials, such as authenticated passports, birth certificates, or driver's licenses, enhance trust in verifying Canadian presence requirements. These credentials, backed by a level of assurance in their authenticity, play a crucial role in establishing confidence and reliability
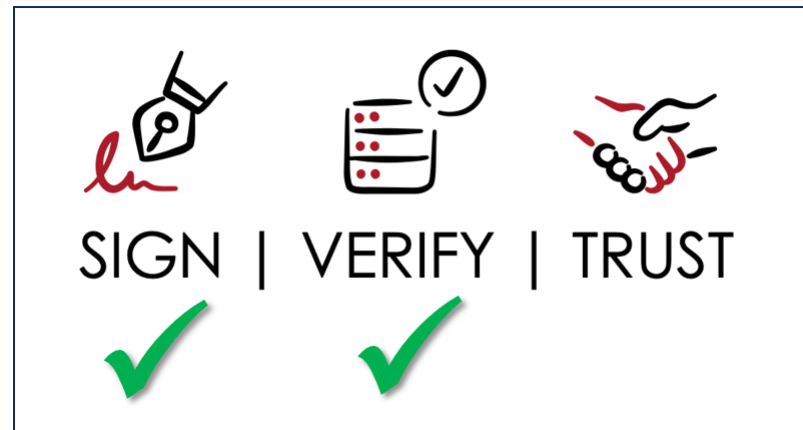

But how do we trust?

- **Trust Registries** – enables global interoperability for the many ecosystems
    - They provide answers to simple questions that allow trust decisions

Is Entity X, authorized to do Y, under governance framework Z.

- Translates to "are you who you say you are" in a particular context.
