# Overview Applicable policies, related guidance, and ccNSO developed practices

Updated 3 April 2024

Over time, and in accordance with its mandate the ccNSO has developed various policies, policy related advisories and interpretation, and practices. The purpose of this document is to provide a current overview of those policies, policy related advisories and interpretation, and practices and those which are under development.

In 2003 the ccNSO was created with the specific mandate (with the exclusion of other groups) to develop and recommend to the ICANN Board global policies relating to country-code top-level domains (Article 10.1 ICANN Bylaws). The scope of this mandate was further detailed in Annex C of the Bylaws: the ccNSO's responsibility is limited to and with exclusion of others to develop policies specifying the rules and conditions under which data will be processed (included, altered or deleted) in the root-zone database.

In addition, the ccNSO was mandated to seek to develop voluntary best practices for ccTLD managers, assisting in skills building within the global community of ccTLD managers, and enhancing operational and technical cooperation among ccTLD managers. Adherence to the results of these additional activities will be voluntary.

As ccTLDs pre-date both ICANN (which was established in 1998) and the ccNSO, basic rules and conditions for processing data with respect to ccTLD, including the data that designates and distinguishes a ccTLD from other TLDs, were in place: RFC1591. When the ccNSO was created this was acknowledged in Annex C of the Bylaws.

In Summary, this document ((VERY ROUGH)) sets out the key elements of policy and practice that forms the framework for how ICANN/PTI and ccTLDs relate to each other - the broad global policy framework.

#### 1. Policy mandate ccNSO

The specific mandate (with the exclusion of other groups) to develop and recommend policies to the ICANN Board global policies relating to country-code top-level domains (Article 10.1 ICANN Bylaws). The scope of this mandate was further detailed in Annex C of the Bylaws: the ccNSO's responsibility is limited to and with exclusion of others to develop policies specifying the rules and conditions under which data will be processed (included, altered or deleted) in the root-zone database.

ICP-1: Internet Domain Name System Structure and Delegation (ccTLD Administration and Delegation	Archived		ICP-1 was adopted by the Board in May 1999 Was archived by Board resolution on adoption of FoI: June 2015	Current practices of the Internet Assigned Numbers Authority (IANA) in administering RFC 1591

- Structure of the root zone is there a policy that relates to what sorts of domain names there are, beyond RFC1591? That's the foundation ccTLDs are a subset. May be useful to reference it as 'the next step up the chain'.
