

Name Dr Abdulkarim Oloyede

Trip: IETF (Online)

Trip Dates 25th March to 1st April 2023

Report Date: 12th April 2023

The purpose of attending the IETF meeting in Japan is to participate in discussions and decision-making related to the development and standardization of various internet protocols and technologies. The Internet Engineering Task Force (IETF) is a community of engineers, designers, and other technical experts who work to develop and improve internet protocols and technologies. By attending the IETF meeting, I had the opportunity to contribute to these discussions and collaborate with other experts in the field. Additionally, I was able to learn about the latest developments and best practices related to internet protocols and technologies. However, I was not able to physically attend the meeting, joining the sessions online still allowed me to participate in these discussions and stay up-to-date with the latest developments in the field. The outcome is increased knowledge and understanding of internet protocols and technologies, as well as the opportunity to network and collaborate with other experts in the field.

As a result of my attendance at the IETF, I intend to have some follow up activities. The follow-up activities include sharing insights gained from attending the IETF meeting with other members of my immediate community. I also intend to contribute to ongoing discussions related to DNS and RSS, and participate in future IETF meetings to further engage in discussions related to internet protocols and technologies. As part of the follow up is also this report as I intend to create and disseminating reports summarizing key takeaways and insights gained from the IETF meeting, and identifying opportunities to apply this knowledge in practical applications.
