

Name: Lars-Johan Liman

Motivation:

The stability and performance of the unique root of the DNS is a long-standing commitment of mine. I want to continue to contribute to it with what experience and knowledge I have. My personal goal is to help ensuring that technical operations of the DNS service that publishes the root zone, and processes for editing it, remain open, inclusive and transparent, and that they adhere to open technical standards. I'm willing to work on documents in support of this.

Indication of availability, not a formal commitment:

I can work on RSSAC documents for about 8 hours/month in addition to the time I spend for administrative RSSAC business. My scheduling horizon is about 6 weeks.

About me:
