

Name

Jason Castonguay

Affiliation and Current Position

Verisign
Resolution Operations Engineer

Relevant Qualifications

I currently help operate DNS Servers for Verisign. Verisign operates both A and J-root, among other large zones, and also serves as the Root Zone Maintainer. Previously, I have helped to operate D-root for the University of Maryland, as well as other DNS servers.

Motivation

I have been a previous member of the Caucus, and would like to rejoin now that an opportunity has presented itself. As a root operator, I am interested in the health and wellness of the root, as well as the global DNS system.

Indication of Availability

I will be available at occasional physical meetings, but present for phone calls and email.

Formal Roles

I am former member of RSSAC as well as the Caucus and am familiar with the early RSSAC documents. I will work to familiarize myself with more current ones.
