

Statement of Interest

Name

Paul Ebersman

Affiliation and current position

Principal Engineer, Neustar

Relevant qualifications

35 years large scale UNIX/IP/DNS, involvement in IETF, DNS-OARC, ICANN (SSAC), NANOG/RIPE.

Motivation for membership in the RSSAC Caucus

My current job involves DNS from registry to registrar to registrant/auth to recursive DNS. Many issues related to root server operations have large overlap with these areas. I think that my operations background could be helpful, and I want to stay current with the work and research the root operator community is doing.

Indication of availability

I regularly attend at least 1-2 ICANNs, 2-3 IETFs and 1 OARC meeting per year and my employer supports this involvement. I am also regularly on conference calls in support of various volunteer work I do.

Formal roles (if any) and interests in the work of RSSAC

\$DAYJOB runs registries, acts as a registrar and runs auth servers for TLDs, 2nd/3rd level domains.
