

Name

Paul Hoffman

Affiliation and current position

Principal Technologist, ICANN

Relevant Qualifications

I am co-developer of the DNS conformance test system created by Standcore as well as developer of DNSHarness sponsored by Verisign. Also, I have authored many DNS-related RFCs.

Motivation for Membership in the Caucus

There is significant overlap between the test work I am doing at ICANN and things that the Caucus might be interested in. For example, I will be developing test systems for comparing how various authoritative servers reply to the same requests. I will also be analyzing data from L-Root to look for patterns from recursive resolvers.

Indication of Availability

I am available immediately.

Formal roles and interests in the work of RSSAC

I have no formal role in RSSAC because I am in a different group than the one that runs L-Root.
