

**Shane Kerr**

**Affiliation and current position:**

Chief Architect at the Beijing Internet Institute (BII) Labs

**Relevant qualifications:**

Researcher in the Yeti project, former employee of ISC and RIPE NCC, former developer of BIND 10 and BIND 9, and general DNS technology work.

**Motivation for membership in the Caucus:**

Right now I have some suggestions for how to improve the root server statistics (such as a standard URL and so on), which I figured would be most easily made as an actual RSSAC Caucus member.

**Indication of availability:**

I am available for specific RSSAC Caucus efforts as needed, up to several hours per week. I occasionally attend events that other RSSAC Caucus members are at such as ICANN, IETF, or DNS-OARC meetings, so will periodically be available for in-person meetings if those are necessary.

**Formal roles and interests in the work of RSSAC:**

Work for one of the coordinators of the Yeti project, BII: <https://yeti-dns.org/>

I am also in the ICANN NCUC. I don't think that is important, but I note it here for full disclosure.
