

Statement of Interest for RSSAC Caucus

Name: Arturo L. Servin

Motivation

Since day one of my working experience I have been related to Internet matters. In the not so early but early days of the Internet in Mexico I worked very closely in the development and operation of its first backbone, I helped NIC Mexico with one of their first network infrastructure and later I worked in the creation of the Internet2 backbone. I spent later years deploying enterprise networks based on TCP/IP and working in routing protocols, VoIP, DNS and security until I joined LACNIC in 2010 as Chief Technology Officer.

In LACNIC I worked in several projects promoting and deploying IPv6, DNSSEC, routing security and other protocols developed in the IETF. During my work in LACNIC I looked forward to improving the participation and work of latin american people in technical and Internet governance forums such as the IETF, ICANN, IGF and others. Also, when possible, I tried to participate in the former RSSAC meetings held during the IETF. As head of technology in LACNIC I consider that I played an important role to deploy important projects that involved DNS architecture, RPKI and the next generation of the whois protocol.

In my current employment in Google Inc, part of my work is to contribute to the development of the Internet in Latin America and the Caribbean. Following that mission and my personal interest I found important to collaborate in the RSSAC.

Indication of Availability:

I am able to attend some ICANN and IETF Meetings in person. I am able to attend all or most of any virtual meetings. I am also able to contribute to RSSAC documents as author or reviewer.

Relevant Qualifications:

- Reverse DNS operations manager for LACNIC
- Experience operating DNS servers at different scales
- DNSSEC
- IPv6, Routing, Security

Formal roles and interests in the work area of RSSAC:

- I worked as CTO of LACNIC and participate in the former RSSAC when RIR were involved
- Former employed by a DNS operator

- Committed to maintain an open Internet
- Committed to the Internet development in Latin America and the Caribbean
