EP-WG's Proposed Framework for a PDP WG on Next-Generation RDS (Draft 5)

This document proposes a framework for a PDP WG on Next-Generation Registration Directory Services (RDS).

This framework was developed by the EWG Process Working Group (EP-WG), a collaboration between the GNSO and Board formed to recommend how to best structure PDP(s) for success – that is, to propose a process which leads to new policies defining the purpose of gTLD registration data and improving accuracy and access to that data.

To develop this framework, principles in the <u>EWG's Final Report on Next-Generation RDS</u> were grouped and sequenced into a process flow consisting of:

Pre-PDP WG Steps

Phase 1: Policy - Requirements Definition

Phase 2: Policy – Functional Design

Phase 3: Implementation Guidance

Post-WG Steps

Tasks to be completed **BEFORE** a PDP WG is formed Policies that establish **WHY** a Next-Gen RDS is needed Policies that detail **WHAT** a Next-Gen RDS must do Guidance on **HOW** a Nex-Gen RDS should implement policy Tasks to be completed **AFTER** the WG's final report

Note: Red text indicates new material for EP-WG consideration

Pre-PDP WG Steps: Where are we in the existing PDP process?

Pre-PDP WG Steps: Completed and Upcoming

Nov 2012	Board	■ Direct preparation of a (PDP) Issue Report
Nov 2012	Board	▼ Launch the EWG
Mar 2013	Staff	PDP - Preliminary Issue Report
Mar-Apr 2013	Community	
Jun 2013	EWG	▼ EWG Initial Report
Jun-Aug 2013	Community	
Nov 2013	EWG	▼ EWG Update Report
Dec-Feb 2014	Community	
Jun 2014	EWG	▼ EWG Final Report
Oct 2014-	EP-WG	■ Develop Recommendations on
Feb 2015		PDP WG Process and Charter Guidance
Mar 2015	EP-WG	☐ Finalize EP-WG output; relay to GNSO & Board
May-Jun 2015	Staff	☐ New Preliminary Issue Report reflecting EP-WG output
Jun-July 2015	Community	☐ Public Comment Period on New Issue Report
Aug 2015	Staff	☐ Final Issue Report reflecting Public Comments
Sep-Oct 2015	GNSO Council	☐ Refine Charter for PDP Working Group
	GNSO Council	☐ Adopt Charter (start of PDP WG process)

Pre-PDP WG Steps: What Comes Next

- 1. The EP-WG shared this proposed framework with the community at these ICANN-52 sessions http://singapore52.icann.org/en/schedule/sat-gnso-working http://singapore52.icann.org/en/schedule/mon-whois
- 2. The EP-WG considered questions raised at ICANN-52 and incorporated clarifications to address them, finalizing this proposed framework for transmission to the GNSO Council and the ICANN Board.
- 3. The GNSO Council and the ICANN Board will discuss this proposed framework. The ICANN Board will re-confirm its request for this board-initiated PDP.
- 4. At the ICANN Board's request, Staff will use EP-WG's output to draft a new Preliminary Issue Report, including EP-WG's proposed framework and a draft PDP WG charter that factors in EP-WG guidance.
- If the EP-WG wishes, EP-WG members will have an opportunity to preview the Preliminary Issue Report to ensure that the EP-WG's framework has been reflected.
- 6. This new Preliminary Issue Report will be posted for a 40-day public comment period.
- 7. If the EP-WG wishes, the EP-WG will reconvene as a group to review public comments and identify any needed changes this proposed framework.
- 8. Staff will produce a Final Issue Report, reflecting both public comments and the EP-WG's framework.
- 9. GNSO Council will consider the Final Issue Report and public comments. Council may refine the report's proposed framework and draft charter before adopting a charter and forming a PDP WG to address this issue.

Pre-PDP WG Steps: Inputs needed by the PDP WG

Inputs already available to inform the PDP include:

- EWG Final Report and FAQs, tutorials, & EWG member statements
- <u>EWG Research</u> on Accreditation, Validation, Privacy/Proxy, Costs, Risks & Benefits
- WHOIS Review Team Final Report
- GAC WHOIS Principles
- 2013 RAA Registration Data (WHOIS) Requirements
- WHOIS Studies on Accuracy, Registrant Identification, Misuse, P/P Abuse
- <u>IETF RFCs on RDAP</u> and <u>EPP</u>
- <u>Data Protection/Privacy Issues Memo</u> (ICANN Legal, Aug 2013)

The EP-WG recommends additional inputs be developed to inform the PDP:

- Community feedback on Preliminary Issue Report, including draft PDP WG charter
- GNSO PPSAI WG Final Report
- GNSO Translation/Transliteration Final Report
- Cost Impact Assessment on All Ecosystem Players
- WHOIS & RDS Benefit Survey
- WHOIS & RDS Risk Survey

Additional recommendations may be provided here on costing methodology, and also on when additional inputs are needed (e.g., before Phase 2/Phase 3).

3-Phase PDP WG Process: Introduction

This framework proposes a 3-phase process for the PDP WG to organize its work:

Phase 1: Policy - Requirements Definition Define WHY a Next-Gen RDS is needed Phase 2: Policy – Functional Design Detail WHAT a Next-Gen RDS should do

Phase 3: Implementation Guidance Consider HOW a Nex-Gen RDS should implement policy

Within each phase, work is grouped into areas, drawing from principles covered by the EWG's Final Report:

Users/Purposes Who should have access to gTLD registration data
Gated Access What steps should be taken to control data access
Data Accuracy What steps should be taken to improve accuracy
Data Elements What data should be collected, stored, and disclosed
Privacy What steps are needed to protect data and privacy

Compliance What steps are needed to enforce policies

System Model What system requirements must be satisfied by any implementation

Cost What costs will be incurred and how must they be covered

Benefit Analysis What benefits will be achieved and how will they be measured Risk Assessment What risks do stakeholders face and how will they be balanced

As depicted on the following chart, these groups have been sequenced to accommodate inter-dependencies and create opportunities for parallel policy development, subject to resource availability.

3-Phase PDP WG Process: Phase Definitions and Examples

Phase 1

The PDP WG examines all RDS policy requirements at a high level. Due to inter-dependencies, all areas must be considered together. For example, the PDP WG will consider whether gTLD registration data should continue to be accessible for any purpose, or whether data should be accessible only for specific purposes. If the PDP WG decides the latter, it should recommend permissible users and purposes. The output of Phase 1 is therefore a set of fundamental requirements that any Next-Generation RDS must support.

The GNSO Council will review Phase 1 outputs before deciding how to proceed.

• GNSO Council Decision Point

Phase 2

The PDP WG designs detailed policies to satisfy requirements established in Phase 1. For example, the PDP WG might define data elements accessible for each permissible user and purpose. Opportunities for parallel Phase 2 policy design have been identified, sequenced to reflect inter-dependencies. For example, group B policies must be drafted before group C can start, but group C policies could potentially be drafted in parallel by PDP WG subteams, given sufficient resources and coordination. The GNSO Council will periodically review Phase 2 work-in-progress to identify gaps or inconsistencies and ensure alignment with Phase 1 requirements.

Phase 3

The PDP WG dives more deeply into each policy group to create implementation guidance. For example, the PDP WG might explore possible Terms of Service for permissible users and purposes and identify challenges that must be overcome. Details explored in Phase 3 may require refinement of certain Phase 2 policies; these must be carefully coordinated to manage inter-dependencies.

3-Phase PDP WG Process: Further Recommendations

Oversight

To ensure ensure alignment with Phase 1 requirements, oversight should be provided by a coordination team composed of (for example) the PDP WG chair, subchairs for each PDP WG subteam, and one or more GNSO Council Liaison(s).

Timeline

To foster sustained progress and timely completion, the PDP WG should work towards a defined timeline and targets (e.g., complete Phase 1 in 90 days). At this time, it is not known how long each phase will take.

Methodology

To faciliate productive dialog, the PDP WG should hold periodic face-to-face conferences -- for example, meeting face-to-face in subteam sessions schedule over 1-2 days, followed by a plenary meeting for cross-team discussion. The methodology used by the PDP WG must be transparent, consistent with the GNSO Policy Development Process, and take into consideration capacity to ensure adequate resourcing from all stakeholders.

Parallelism

The EP-WG recommends a single PDP WG that addresses all policy areas simultaneously during Phase1. Parallel subteams may be used during Phases 2-3 to address policy areas concurrently, in a sequenced manner, given sufficient resources and coordination. Especially during Phase 3, external experts may be called upon to help the PDP WG complete research in selected areas (e.g., data protection laws, risk assessment, cost impact analysis).

Decision Points

Definition of GNSO Council decision points to be provided here.

For example, at each decision point, the GNSO Council may decide that sufficient progress has been made to move to the next step, that questions still need to be addressed before moving forward, or that the PDP WG has accomplished its charter.

Post-PDP WG Steps: Using the PDP WG's Output
