Staff is developing a WHOIS Accuracy Reporting System based on the methodology developed by NORC at the University of Chicago.

To accomplish the requested analysis, Staff’s work is focusing on:

- Statistical methodology;
- Access to WHOIS records;
- Parser to automate contact data extraction;
- Automated address verification; and
- Call center to call sampled records.

In 2015 Staff launched the Accuracy Reporting System to conduct bi-annual studies in collaboration with NORC. The project is being operationalized in phases, based on the stages of WHOIS Accuracy verification described in **SAC058: SSAC Report on Domain Name Registration Data Validation** (Syntax, Operational, and Identity). The studies leverage the commercial validation services customized to ICANN RRA requirements to test the syntactical and operation accuracy of the email, telephone number, and postal addresses using actual data of approximately 10,000 WHOIS records per study and produces estimates for the gTLD space as a whole as well as specific segments of interest. All records found to be inaccurate are provided to ICANN Contractual Compliance for follow up with the registrar.
