

We'll start deliberating on three questions

1 Users/Purposes: Who should have access to gTLD registration data and why

What are the guiding principles that should be used to determine permissible users and purposes, today and in the future?

Should gTLD registration data be accessible for any purpose or only for specific purposes?

For what specific purposes should gTLD registration data be collected, maintained, and made accessible?

Who should be permitted to use gTLD registration data for those purposes?

What should the over-arching purpose be of collecting, maintaining, and providing access to gTLD registration data?

Defer to phase 2/3: Policies such as data elements accessible to each user/purpose; guidance on Terms of Service for each purpose

Iterating in a randomized manner

4 Data Elements: What data should be collected, stored, and disclosed?

What are the guiding principles that should be applied to all data elements to determine whether they are mandatory/optional to collect, public/non-public to access, etc?

Do existing gTLD registration data elements sufficiently meet the needs of purposes identified as permissible?

Should any gTLD registration data elements be removed, revised, and/or added to meet those needs?

Should gTLD registration data collection and access be based on permissible purposes, jurisdiction, applicable laws, registrant type, and/or other criteria?

Defer to phase 2/3: Policies such as application of principles to each specific data element; guidance on how gTLD data elements map to EPP and RDAP.

5 Privacy: What steps are needed to protect data and privacy?

What are the guiding principles that should be applied?

Do existing gTLD registration directory services policies sufficiently address compliance with applicable data protection, privacy, and free speech laws within each jurisdiction?

Do existing gTLD registration directory services policies sufficiently address the overall privacy needs of registrants and other stakeholders?

What new or enhanced privacy approaches or levels should be used to overcome identified barriers to protection of gTLD registration data and registrant privacy and why?

Defer to phase 2/3: Policies such as specific over-arching privacy policy for gTLD registration directory services or enhanced privacy options that may be build upon policies specified by the PPSAI PDP; guidance on application of data protection laws in each jurisdiction and how they apply to each registration data element.
