

The IANA Transition:

What it means to ICANN and At-Large

Capacity Building Webinar – 6 April 2016

Olivier Crépin-Leblond, Alan Greenberg

06 April 2016

Overview

- What is IANA and the transition?
- Why is the transition important to ICANN?
- Why is the transition important to At-Large?

IANA

Internet Assigned Numbers Authority

- Handles publication (and associated tasks)
 - Internet Root Zone - ICANN
 - Internet Parameters - Internet Engineering Task Force (IETF)
- Distribution of IP addresses and Autonomous System Numbers (through regional registries)
- Other
 - Time Zone Database
 - .INT Top Level Domain

IANA

Internet Assigned Numbers Authority

- Originally, a person!

Jon Postel

IANA

Internet Assigned Numbers Authority

- Originally, a person!

Jon Postel

Jon died
in 1998

For whom?

- Funded by the US Defence Advanced Research Projects Agency (DARPA) through the University of Southern California Information Sciences Institute (USC ISI)
- In 1998, transferred to the US Department of Commerce – National Telecommunications and Information Administration (NTIA)

ICANN and IANA

- Memorandum of Understanding
 - 7 versions starting in 1998, the last being the “Joint Project Agreement” (JPA)
 - Transition from a largely US educational and research project to a commercial and international resource
- Affirmation of Commitments (2009)
- 2014 Announcement to consider relinquishing control over IANA and by implication, ICANN
 - “The Transition”

Why is Transition Important to ICANN

What this means to ICANN

- The US is no longer “in control”
 - How was “control” exercised?
 - Largely benign
 - Agreements with
 - ICANN
 - Verisign
 - In depth oversight of IANA by NTIA
 - Approving root zone changes
 - Details control over all aspects of IANA
- International Implications
 - Concept of Internet Governance
 - ITU
- Has significant repercussions in ICANN’s Accountability

Why is Transition Important to At-Large

What this means to At-Large and Users

- IANA is essentially Infrastructure
- Infrastructure, when it is working well, is effectively invisible
 - For example, Sewers

What this means to At-Large and Users

- IANA is essentially Infrastructure
- Infrastructure, when it is working well, is effectively invisible
 - For example, Sewers
- If transition is done properly, it will be invisible to users.
 - US oversight made prudent, perhaps overly safe judgements, and no political judgements
 - Not expected to change.

So why did we care?

- ALAC and many individuals in At-Large put an ENORMOUS effort into the transition.

So why did we care?

- ALAC and many individuals in At-Large put an ENORMOUS effort into the transition.

If transition is done properly, it will be invisible to users.

- We had a strong interest in making sure it was done properly.

The Essence of Multistakeholderism

- Stakeholders come from all parts of the Internet community
- They have different perspectives
- Many are passionate about beliefs
- Some have long memories and “axes to grind”
- Some have territory to defend
- Many have large financial investments involved and therefore a strong interest in certain outcomes
- Some wanted to see ICANN out of the picture

Finding common ground and agreement is not easy!

At-Large

- We had no aim other than a clean success
- The US may have done a good job, but with our large international perspective, getting them out of the picture was REALLY important.
- Keeping ICANN in the picture essential
 - ICANN gives users a voice
 - FAR less likely with other potential organizations

CCWG-Accountability

- Cross-Community Working Group of ICANN stakeholders, but includes many Participants external to ICANN
- Charged with ensuring that ICANN is accountable to the community (without fully defining accountability or community).

The Problem

- Can be described in many ways, but much of it comes down to “Lack of Trust”

Before Appointment to ICANN Board

06 April 2016

The IANA Transition: What it means to ICANN and At-Large

19

After Appointment to ICANN Board

06 April 2016

The IANA Transition: What it means to ICANN and At-Large

20

The Issues

(A very personal Perspective)

- Board not trusted
 - Despite being selected BY the ICANN community, once selected, they can no longer be trusted.
- Perceived as being more concerned with corporation than stakeholders
- Some merit to concerns
 - Lack of impact of ALAC over the years
 - Historical Contractual Compliance issues

ALAC Solution

- Address perception of lack of community control
- Ensure that community DOES have leverage to keep everyone honest
- Keep things humming...
- Keep control from vested interests – preserve the public interest and needs of users.
 - That needs a strong and credible ICANN!
