Waudo Siganga: Drafat definition:

Waudo Siganga: The geographic market is defined by physical boundaries, in many cases coinciding with administrative or political boundaries. The smallest units could be community/physical features/ town/city TLDs or lower level identifiers fanning out to include ccTLDs, and finally continental TLDs. All these TLDs are in competition within the larger market in which they fall. For example city TLDs are in competition with all high TLDs including ccTLDs, continental TLDs.

Waudo Siganga: finally continental TLDs. All these TLDs are in competition within the larger market in which they fall. For example city TLDs are in competition with all high TLDs including ccTLDs, continental TLDs.

Eleeza Agopian: Stan, can you type the categories into the chat pod so that we can capture them here?

Waudo Siganga: so far there are 45 geo names delegated

Waudo Siganga: but I think for our analysis we will consider others such as second-level etc

Jonathan Zuck: to which we need to add .asia, etc.

Eleeza Agopian: This is the link, which I'll email to the list: https: //gtldresult.icann.org/applicationstatus/viewstatus

Eleeza Agopian: Search geographic and delegated

Eleeza Agopian: You can stay in this room if you're on the Nielsen call in 5 minutes.
