

Orphan Glue Records in the DAGB

example.com NS inside.example.com
NS outside.notexample.com

Glue needs to be added for inside.example.com
inside.example.com IN A 127.0.0.1

example.com is deleted, but not the A record

registration2.com NS inside.example.com
NS another.something.com

Now have an orphaned glue record situation

A "sane" approach has been introduced into the guidebook:
Registries must have an orphaned glue removal policy

technical to exploit, and the problem doesn't go away with the removal of the orphan glue
