The mission of the Internet Corporation for Assigned Names and Numbers (ICANN) is to ensure the stable and secure operation of the Internet’s unique identifier systems. Part of living up to this Mission is a commitment to improve diversity of participation at ICANN, in line with the core values in the new Bylaws. The collection of reliable and relevant data is key to these efforts.

There have been many diversity discussions over the years, culminating in a request from our community at ICANN54, in the ‘Women in ICANN, Internet, and ICTs’ session, for further statistics to explore gender diversity. Following on community calls for data to inform diversity discussions, as well as to support the community's broader work on diversity, this survey aims to determine current perceptions of gender diversity at ICANN and to identify potential barriers to participation.

A community-wide survey ensures everyone has an opportunity to provide their views and identify areas that require additional attention. By taking just ten minutes to complete this survey, you will help to support diverse and meaningful engagement.

The survey aims to capture data that can help inform community discussions on the topic of gender diversity. Potential solutions or recommendations on next steps could be considered by the community through relevant mechanisms and channels. This survey focuses specifically on gender as one aspect of diversity that relates to potential barriers to participation. Other relevant areas are currently being discussed in the Work Stream 2 Diversity subgroup and may be explored with future surveys.

Your responses are anonymous and will remain confidential. Your participation in this study is entirely voluntary and you may withdraw at any time. Survey responses will be collected and analyzed in accordance with ICANN’s Privacy Policy.
