

My name is Lucas de Moura, I'm from ██████████ Brazil. I am now a member of Axur's CSIRT and anti-fraud team, where I develop tasks like reverse engineering of malwares, mainly bankers, that affects customers from some Brazilian banks and others institutions. In addition, I do analysis of digital frauds like phishings, pharmings, etc. This position qualifies me to all the specs listed on the opportunities section. Additionally I am starting to take part in working groups like M3AAWG and APWG.

In college, after some semesters of *Information Systems*, I changed to Philosophy where I start to develop a research on cyber activism and the relationship of Polis and Cyberspace. I consider myself an autodidact and I always work in an information technology background (as you can see in my résumé) in projects that lead me to my current job position.

I am also a scout leader and based on this background I created (with the support from my actual company) a project that aims at teaching young kids about how the internet works, their risks and how to avoid them. The idea is to show children and young teenagers that it is possible to have fun on the web in a safe way. The initiative lead me to opportunities like be a NextGEN@ICANN participant in the ICANN meeting. And after this participation I started to be engaged with the multistakeholder community in many different layers, recently, Daniel Fink (Stakeholder Engagement ICANN staff) told me about the opportunity of be part form the Second Security, Stability, and Resiliency of the DNS (SSR2) Review Team I would love to participate as a volunteer.
