

Resume of Olha Vasylevych

date: September 2015

Date of birth: [REDACTED]
Gender: Female
Region/City: [REDACTED] Ukraine.

[REDACTED]

Experienced engineer in IP routing, network security and services. 13+ years experience in implementation of various network solutions, maintenance and support.

Since 2006 I closely follows development of RIPE policies and procedures, one of my duty is maintenance of IP addresses and ASN for several LIR's.

During my work as a senior network engineer in ISP and on my current position of technical consultant in the domain name registrar and hosting company I work with incidents of abuse of IP addresses and domain names, denial of service mitigations and various malware activity.

Year ago Hosting Ukraine LLC gained accredited registrar status and this was a big step for our team. My duty was internal analysis of our reseller-registrar for compliance with ICANN policies and procedures, follow up of implementation of ICANN requirements, accreditation application writing and support of application during ICANN review. During this work I become familiar with ICANN activities and principles of multistakeholder work.

On my current position I am involved in writing documentation and internal policies for abuse handling for the registrar.

I have good experience with production primary and secondary DNS servers configuration and maintenance.

Most resent experience
