A purpose of RDS is to provide authoritative gTLD registration data, such as domain names and their domain contacts and name servers, in accordance with applicable policy.	27.78% 5
A purpose of RDS is to provide authoritative gTLD registration data, such as domain names and their domain contacts and name servers, as authorized by applicable policy.	16.67% 3
A purpose of RDS is to facilitate dissemination of authoritative gTLD registration data, such as domain names and their domain contacts and name servers, in accordance with applicable policy.	16.67% 3
A purpose of RDS is to facilitate dissemination of authoritative gTLD registration data, such as domain names and their domain contacts and name servers, as authorized by applicable policy.	16.67% 3
A purpose of RDS is to facilitate dissemination of gTLD registration data, such as domain names and their domain contacts and name servers, in accordance with applicable policy.	50.00% 9

RDS PDP WG Poll on Purpose - 7 March

A purpose of RDS is to facilitate dissemination of gTLD registration data, such as domain names and their domain contacts and name servers, as authorized by applicable policy.	11.11% 2
Total Respondents: 18	

#	Comment Box: If desired, use this comment box to provide rationale or suggest alternatives.	Date
1	(1) Any of these would likely work, as would the one checked with "provide" swapped in (that option was not provided). (2) In our current RDS, this data is made available both by registrars and (thick) registries. They sometimes differ. Only one can be authoritative. But the system provides both. This is my hesitancy about "authoritative."	3/10/2017 9:21 PM
2	I'm not comfortable with including "authoritative" unless we have a corresponding definition of the word. My concern is based on a belief that people may associate possession with authority and I do not believe that association is always correct.	3/8/2017 7:03 PM
3	My definition of "authoritative" is "the data that's in the registry." That's the standard industry and the historical understanding. It means that contact data in the registry (and thus the RDS) can be inaccurate, but it's what's on the record. "Facilitate dissemination" is a poor substitute that doesn't add anything and may even be inaccurate. "Facilitate" means "to make (an action or process) easy or easier." But either RDS provides registration data or it does not, and a basic purpose of RDS is certainly o provide registration data. "Facilitate dissemination" is more about the HOW or TO WHOM, and those issues are covered under "applicable policy."	3/8/2017 5:16 PM
4	dont think domain-contacts should be in the 'such as' as the WG has not yet decided if 'thick' data is appropriate	3/8/2017 3:39 PM
5	RDS in its simplest form is a data set. It needs to be authoritative and set up in accordance with applicable policy. "As authorized by" is redundant and unnecessary. The "to facilitate dissemination of" is a separate issue. First, what data set to assemble as authoritative. Second, what are the policies around facilitating dissemination (how about simply saying "access").	3/8/2017 3:43 AM

Q3 Is there anything missing from the latest draft statement of purpose (below) that you suggest be added?

Answered: 18 Skipped: 0

Answer Choices	Responses
No, not at this time	72.22% 13
Yes (please describe below)	27.78% 5
Total	18

#	Yes (please describe below)	Date
1	As I mentioned before, as worded it seems like the second paragraph of above statement is defining an RDS incorrectly as a system that collects and maintains data. This paragraph is trying to make the distinction between registration data and directory services but as worded I don't think it draws a clear line.	3/11/2017 8:56 AM
2	actually, I think we are not ready to decide on this statement at this time. It is not clear to me that we are talking about the same things when we discuss the purpose of RDS. More work required.	3/10/2017 10:44 PM
3	I would reworded to say: the purpose of a RDS is to facilitate dissemination of gTLD registration data	3/8/2017 9:35 PM
4	A purpose of RDS policy is to protect the privacy of individuals and ensure that gTLD registration data is disseminated only as authorized by applicable policy.	3/8/2017 7:03 PM
5	as authorized by applicablle policy	3/8/2017 10:44 AM
