

Internet Governance in China

- What have been done
- What are we doing
- What are we thinking and planning for future

CNNIC

What we do

Apart from fulfilling its commitment as the operator, administrator and service provider of national network fundamental resources, CNNIC devotes its talent and energy on technology research, industrial analysis and cooperation platform for the global community.

- ✓ **Survey on the development status of China's Internet**
- ✓ **Support for the research of government policies**
- ✓ **Contribute to IG in both China and the world**

International & regional IG events

Workshops

Ecosystem

Chinese Internet Community

TEAMWORK AND COOPERATION

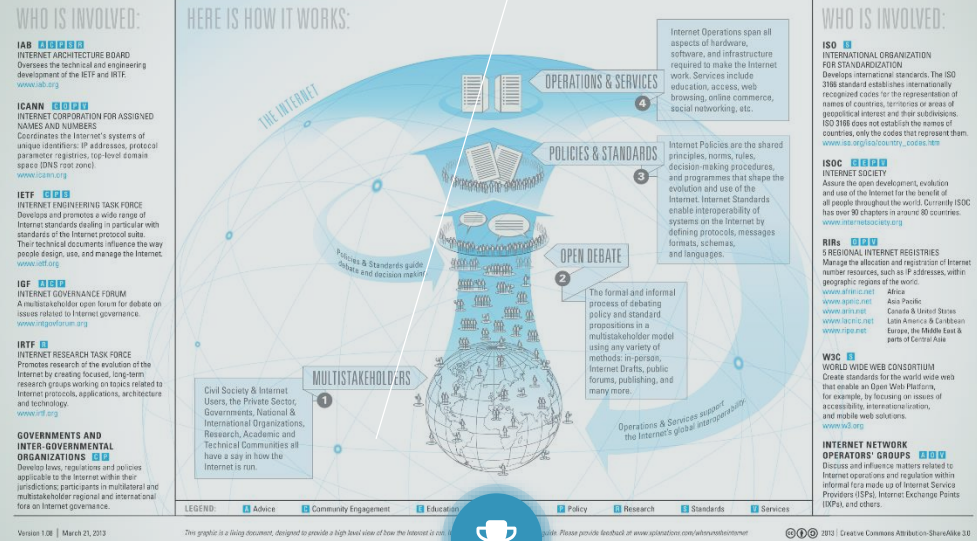

Various actors/stakeholders within Chinese Internet community work together and play different roles in the global Internet Governance ecosystem.

- ✓ Regular community gathering
- ✓ Professional advice from different angles
- ✓ Joint projects & cooperation programs

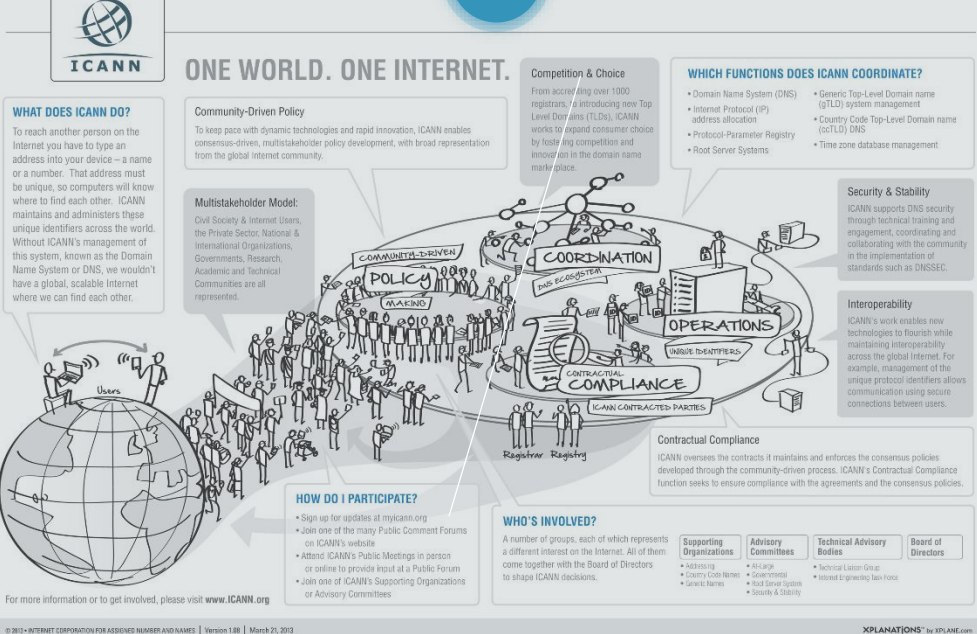

WHO RUNS THE INTERNET?

NO ONE PERSON, COMPANY, ORGANIZATION OR GOVERNMENT RUNS THE INTERNET.

The Internet itself is a globally distributed computer network comprised of many voluntarily interconnected autonomous networks. Similarly, its governance is conducted by a decentralized and international multistakeholder network of interconnected autonomous groups drawing from civil society, the private sector, governments, the academic and research communities, and national and international organizations. They work cooperatively from their respective roles to create shared policies and standards that maintain the Internet's global interoperability for the public good.
