

During our [5 December meeting](#), the RDS PDP WG began deliberation on **Domain Name Management** as a possible legitimate purpose, working from the [purpose document produced by drafting team 2](#). The WG deliberated on the definition of this purpose, whether Domain Name Management is a legitimate purpose for collecting some registration data, and (briefly) the registration data needed for this purpose.

This poll gives all WG members an opportunity to consider and express their views about a proposed WG agreement that surfaced during this call.

Note that we are using a building-block approach to reach points of rough consensus on our charter question of "Purpose:" As such, any agreement on the legitimacy of collecting data for this one purpose does not preclude additional purposes being agreed as legitimate for the same or other data. Poll results will be used to inform deliberation during future WG meetings and on-list.

Any WG member who did not attend the 5 December WG meeting is expected to catch up on WG discussion before taking this poll. Meeting notes and materials, including transcripts and recordings, can be found here: <https://community.icann.org/x/MAByB>

This poll will close at COB Saturday 9 December.

As [previously announced](#), by submitting a response to this poll, you are granting permission for your entire response - including WG member name and response timestamp - to be included in published poll results. Responses submitted by WG members are not assumed to reflect the views of any organization with which they may be affiliated.

*** 1. Your name (must be RDS PDP WG Member - not WG Observer - to participate in polls)**

If you are a WG Observer and wish to participate in polls, you must upgrade to WG Member to do so.

Please do NOT participate in this poll if you are a WG Observer who has not upgraded to WG Member.

2. Domain Name Management:

Those on the 5 December WG call expressed support for the following statement; no objections were raised on the call:

Domain Name Management is a legitimate purpose for collecting some registration data.

Initial agreement during the call was based on the following definition of Domain Name Management produced by the drafting team:

Information collected to create a new domain name registration and ensuring that the domain registration records are under the control of the authorized party and that no unauthorized changes, transfers are made in the record.

Later in the call, an extended definition of Domain Name Management was also proposed:

Information collected to create a new domain name registration, enabling management of the domain name registration, and ensuring that the domain registration records are under the control of the authorized party and that no unauthorized changes, transfers are made in the record.

In considering these, you may also find it useful to refer to the EWG Report definition which the drafting team started from:

Creating, managing and monitoring a Registrant's own domain name (DN), including creating the DN, updating information about the DN, transferring the DN, renewing the DN, deleting the DN, maintaining a DN portfolio, and detecting fraudulent use of the Registrant's own contact information.

Please indicate below which of the following statements best reflects your level of agreement with Domain Name Management as a legitimate purpose for collecting some registration data.

Note: If the purpose is agreed to be legitimate, we will then deliberate on the specific data needed for that purpose.

- Domain Name Management is a legitimate purpose for collecting some registration data, based on the drafting team's definition: Information collected to create a new domain name registration and ensuring that the domain registration records are under the control of the authorized party and that no unauthorized changes, transfers are made in the record.
- Domain Name Management is a legitimate purpose for collecting some registration data, based on the extended definition: Information collected to create a new domain name registration, enabling management of the domain name registration, and ensuring that the domain registration records are under the control of the authorized party and that no unauthorized changes, transfers are made in the record.
- Domain Name Management is a legitimate purpose for collecting some registration data, but I wish to propose my own definition of this purpose in the comment box below.
- Domain Name Management is not a legitimate purpose for collecting any registration data.

Please provide your rationale for disagreeing with this purpose or a proposed alternative definition

Please click the Submit button below to record your responses.

By submitting a response to this poll, you are granting permission for your entire response - including WG member name and response timestamp - to be included in published poll results.

Input gathered through this poll will be used as input to further WG deliberation on charter questions. Thank you for participating in this poll.
