

1 **Scenario: Significant part of geopolitical entity exits geopolitical entity**

2

3 Example: Great Britain leaving European Union. Southern Sudan leaving Sudan.

4 Impact in terms of ISO 3166-1: No change in code element of original entity (EU and SD
5 remain to be listed).

6 Impact in terms of ccTLD: Depending on policy, a significant number of registrations may
7 need to be terminated.

8

9 This scenario should not be covered by the ccNSO Policy on retirement of ccTLDs.

10 Rationale:

- 11 1. Original Code Element is not affected. Hence triggering event as identified does not
12 manifests itself.
- 13 2. ccTLDs registration policy is out of scope of ccNSO policy remit (see Annex C ICANN
14 Bylaws)
