Hi,

I am Amr Elsadr, and am one of the NCSG representatives on this team. My background is in healthcare, but have worked most of my career in telemedicine and e-health solutions for healthcare providers and patients. I am currently consulting on hospital information system designs, mainly focused on mapping of information infrastructure as part of the design process.

I've been involved with ICANN since 2009, and during that time have been involved in a few WHOIS-related efforts including the "thick" WHOIS PDP and IRT, as well as the translation and transliteration of contact information PDP (concerned with internationalized registration data) and IRT. I represented the NCSG on the GNSO Council between 2015 and 2017, and served on the ICANN Policy Staff team in 2017 supporting the GNSO, during which time I assisted in supporting the RDS PDP.

Thanks.

Amr
