# How should process look like?

**Break-out Sessions 1:** how to move from A to B? Which steps in between?

A: trigger event

B: removal from the zone

## Group 1

### Local issue
- How do you solve the locale issue if the gaining registry has one

### Staff allocations
How to keep staff on board?

### Transfer process
• Process of transferring registrations to the gaining registry. If the gaining registry is empty, that is straightforward (Congo to Zaire). If the TLD is going away with no successor: do you play out the renewals until all domains are expired. Or do you do an active cancellation?

### Registry Communication
- Communication between registry and registrars. Community to be given input into the process early.

### IANA re Database
IANA activities regarding database changes

### Trademark issues
• Potential trademark issues.

## Group 2

### Communication between IFO and ccTLD
- Need for communication between IANA functions operator and ccTLD manager

### How many domain names
- How many domains in zone file?

27    Comment Peter Koch: Peter: the next user of the code is not at the table here. The larger TLD will leave
28    more waste (use of name outside the DNS). Renaming a big TLD. Real stakeholder is not here.

## 29    Communication ccTLD

30    • Communication with registrars, broader community. GVT no longer part of that

## 31    Retirement Plan

32    Notion of the need for a plan between IANA functions operator and the ccTLD manager. Need for
33    flexibility in the plan

## 34    Default plan

35    Default plan in case ccTLD manager refused to cooperate in the development of the plan

# 36    Group 3

## 37    Change of code element

## 38    Key -event to removal

## 39    PTI notify manager

## 40    Long - stop date

41    • Long-stop date when domain is removed from root

### 42    Short

43    • Long-stop date: shorter if ccTLD manager is non-responsive?

44    Shorter if no agreement

### 45    Longer
46    If agreed

47    • Process factors, e.g. stop taking new registrations, transfers of domain name holders, registrars
48    transfers, renewals etc., stop accepting disputes

49    Is there a need to stop accepting registrant and registrar transfers?

50    Nick: If you got a 5-year retirement process, the need to be able to renew if it grandfathers into a new
51    ccTLD is important.

52    Kim D: no constraint on what registration period can be. Concept of renewal. Practical solution can't be
53    fully gated at the length of the registration period.

54

## In between steps: agreed

- In between steps to be agreed between PTI and the manager

# Issue Identified

## Reversal name change

What would happen if .CD would change back to .ZR?

Kim D: I assume this would need to go through a new delegation process.

Assuming the local community is in support, this would be a straightforward process.
