Background

The National Telecommunications and Information Administration (NTIA) has requested that ICANN “convene a multistakeholder process to develop a plan to transition the U.S. government stewardship role” with regard to the IANA Functions and related root zone management. In making its announcement, the NTIA specified that the transition proposal must have broad community support and meet the following principles:

- Support and enhance the multistakeholder model
- Maintain the security, stability, and resiliency of the Internet DNS
- Meet the needs and expectation of the global customers and partners of the IANA services
- Maintain the openness of the Internet.

NTIA also specified that it would not accept a proposal that replaces the NTIA role with a government-led or an intergovernmental organization solution.

On June 6 ICANN proposed the creation of an IANA Stewardship Transition Coordination Group (ICG) “responsible for preparing a transition proposal reflecting the differing needs of the various affected parties of the IANA functions.”

It was determined that Stewardship Transition proposals for each of the IANA functions should be developed by the directly affected communities, the IETF and IAB for IANA functions related to Internet Protocol Parameters; the RIRs for functions related the management and distribution of numbering resources; and the GNSO and ccNSO for functions related to the Domain Name System. These efforts will inform the work of the ICG, whose responsibility is to develop an overall integrated transition proposal from these autonomously developed components.

Two of IANA’s global directly affected communities, the addressing and Internet protocol parameter communities, have responded to the NTIA’s announcement and the formation of the ICG, by establishing working groups to provide input on their specific needs and expectations with respect to the IANA Stewardship Transition.

This CWG was formed as an integral part of this transition process, and to develop a proposal for the elements of the IANA Stewardship Transition that directly affect the naming community.
