Selected main meeting sessions that may be of interest to At-Large Community members
You may also wish to refer to the main ICANN Meeting Schedule.

Monday 23 June
1000 - 1230: Workshop; Presentation of Recommendations of IDNC WG for IDN Fast Track Process
> The work of the IDNC Working Group to produce a Fast Track process for introduction of IDNs will be presented and discussed.

1330 - 1530: Workshop: JPA Presentation and President’s Strategy Committee Presentation
> The main workshop at the Paris meeting to discuss the completion of the multi-stakeholder model of ICANN and the future of the organisation after the ending of the JPA with the US Government.

1500 - 1630: Workshop: At-Large Review
> The main public session to discuss the At-Large Review and the Draft Final Report presented by the review team.

Wednesday, 25 June

1300 - 1400: GNSO Improvements Implementation
1400 - 1530: Workshop: Board Governance Committee At-Large Review Working Group Discussion
> Workshop involving the Board members responsible for the ALAC Review process and an open discussion in detail of the recommendations in the Draft Final Report.

Thursday, 26 June

900-1200: Workshop. IDNs
> This workshop will provide detailed information about the IDNA protocol. The IDNA protocol is a mechanism to handle non-ASCII characters in domain names in a standard fashion, and it is currently under revision. The protocol is allowing Internet applications, such as browsers, to use domain names with non-ASCII characters by converting them to ASCII labels that the DNS will understand and process. As such the protocol provides the foundation of what characters are considered valid and can be used in IDNs. On top of the protocol restrictions, registry operators will supply additional registration policies to eliminate for example confusion between two visually identical domain names, as much as possible.

The protocol revision is done by the IETF, and as speakers in this session we have the main authors of the proposed revised protocol. They will provide you with important information about what changes are proposed compared to the current version of the protocol, and why these changes are necessary.

1300 - 1430: Workshop: Translation Programme
> This workshop will allow members of the community to hear about developments in the implementation of multilingualism in ICANN, and to see more details of the more than 200 responses to the translation survey conducted in advance of the Paris ICANN meeting.
