

# Home

This is the online collaborative workspace of the **Cross-Community Working Group (CCWG)** that has been tasked to develop a **Framework of Uniform Operating Principles for Future CCWGs**, workable across all SO/ACs, for the formation, operation, decision making and termination of future CCWGs.

The Charter for this CCWG was drafted by a ccNSO-GNSO Drafting Team and approved by the ccNSO and GNSO Councils in March 2014.

This CCWG was also preceded by a GNSO Drafting Team that developed an initial set of principles in 2012 that was circulated to all other ICANN SOs and ACs for their feedback. This wiki space also contains information - including membership lists and background documentation - on that previous work.
