What We Need Your Input On

ICANN org is seeking input on two matters:

1. The draft Registration Data Consensus Policy for gTLDs, which sets out Consensus Policy requirements concerning the collection, transfer, and publication of gTLD registration data.

a. Areas that may be of interest include:

- Requirements relating to the transfer of specific registration data from registrar to registry and its impact on the Thick WHOIS Transition Policy for .COM, .NET and .JOBS. See section 7 of Registration Data Consensus Policy.
- Log file requirements relating to communications sent to RDDS/WHOIS Contacts, in particular, a prohibition on the inclusion of personal data in these required log files. See section 11 of Registration Data Consensus Policy.
- Changes to processing requirements for administrative and technical contact data elements. See section 6 of Registration Data Consensus Policy.
- Standardization of practices concerning the Registrant Organization data element, for example, required notifications to the registrant and how and when the value must be published. See Section 6, Section 9 and Addendum II of Registration Data Consensus Policy.
- Changes to the duration of retention requirements for values of data elements. See section 12 of Registration Data Consensus Policy.

2. Updates to the policies and procedures that were impacted by the Registration Data Consensus Policy due to EPDP-TempSpec Phase 1 Recommendation 27

- Recommendation 27 within the [EPDP-TempSpec Phase 1 Final Report](#) notes that as part of implementing the EPDP-TempSpec Phase 1 recommendations and to ensure consistency, updates will need to be made to existing policies and procedures that touch on Registration Data. Consistent with Recommendation 27, the ICANN Board directed ICANN org to work with the IRT to examine and report on the extent to which the EPDP-TempSpec policy recommendations require modification of existing Consensus Policies.
- ICANN org performed a detailed review and analysis of 24 existing policies and procedures. Eighteen of the reviewed policies and procedures were determined to have been impacted by the Registration Data Consensus Policy. Impacts included outdated provision language (e.g., references to administrative contact requirements), high-level issues such as the relevance or inconsistency of an existing policy or procedure with the new Registration Data Consensus Policy, or implications for existing contractual provisions. Three of the reviewed policies and procedures were determined to not be impacted by the Registration Data Consensus Policy. One advisory was reissued rather than redlined as part of the Recommendation 27 review. For a complete list of the reviewed policies and procedures, please refer to EPDP-TempSpec Phase 1 Recommendation 27 list of existing policies and procedures in the Supporting Information section below.

Proposals For Your Input

[Draft Registration Data Consensus Policy for gTLDs](#)

[Provide Your Input](#)

Background

The [Temporary Specification](#) (TempSpec) for Generic Top-Level Domain (gTLD) Registration Data, which modifies existing requirements in the Registrar Accreditation Agreement and Registry Agreement to comply with the European Union's General Data Protection Regulation (GDPR), was adopted by the ICANN Board on 17 May 2018.

Following ICANN Board adoption, the Generic Names Supporting Organization initiated an expedited policy development process (EPDP) to determine if the TempSpec should become an ICANN Consensus Policy as is or with modifications.

Recommendations to be implemented with the help of the community-based Implementation Review Team (IRT) were put forth for the ICANN organization (org). The resulting ICANN Consensus Policy is intended to comply with the GDPR and consider other relevant privacy and data protection laws.

ICANN org worked with the IRT to produce the proposed Registration Data Consensus Policy for gTLDs. This Public Comment proceeding is intended to gather input on the implementation plan for the EPDP-TempSpec:

- Phase 1 [recommendations adopted](#) by the ICANN Board on 15 May 2019
- Phase 2 Priority 2 [recommendations adopted](#) by the ICANN Board on 21 June 2021
- Phase 1 GNSO Council Supplemental Recommendation 12 [adopted](#) by the ICANN Board on 24 February 2022

For more information regarding Registration Data Policy implementation, please consult the [collaborative workspace website](#).

Next Steps

ICANN org will prepare a Public Comment summary report. ICANN org and the IRT will consider Public Comment submissions in preparation for the implementation of the updated Registration Data Consensus Policy for gTLDs. After the implementation plan has been finalized, ICANN's Contracted Parties will be notified of the implementation and compliance deadlines. The publication of the Consensus Policy is planned for the first quarter of 2023 with an effective date of the fourth quarter of 2024.

Supporting Information

This additional information from ICANN org provides more context for this Public Comment Proceeding and may help you review the proposals for input and publish a submission.

FINAL VERSION SUBMITTED (IF RATIFIED)

The final version to be submitted, if the draft is ratified, will be placed here by upon completion of the vote.

Registration Da...22-11Nov-30.pdf

FINAL DRAFT VERSION TO BE VOTED UPON BY THE ALAC

The final draft version to be voted upon by the ALAC will be placed here before the vote is to begin.

DRAFT SUBMITTED FOR DISCUSSION

The first draft submitted will be placed here before the call for comments begins. The Draft should be preceded by the name of the person submitting the draft and the date/time. If, during the discussion, the draft is revised, the older version(S) should be left in place and the new version along with a header line identifying the drafter and date/time should be placed above the older version(s), separated by a Horizontal Rule (available + Insert More Content control).
