

Language Translation Capability Added

We were able to find an alternative method for enabling the Microsoft Bing language translation capability. At present, it is only available on a Space-by-Space basis and is currently being tested/evaluated in this CROPP application.

To operate, just click on the Translate box (upper area of the left Navigation menu), select from one of the 30 languages, and the entire page will be translated. Given that it is a computer-generated translation, there may be errors and peculiarities; however, we hope that it is generally useful in terms of understanding the content.

If you have any comments or questions, please feel free to enter them at the bottom of this Blog note.
