Description

FY20 Project Description:

With the rollout of the Zoom conferencing tool, this request is granted for real-time transcription (RTT) services within, or otherwise compatible with, Zoom and not Adobe Connect. This request is being granted: (a) for up to 10 hours of At Large intersessional teleconferences per month; (b) on the basis that it will be run as a pilot/trial for the benefit of the whole community; and (c) with the express requirement that the ALAC prepare and submit a report and review of the quality, sufficiency and recommendations regarding provision and continuation of a RTT service by the close of FY20.

The report is to be submitted to sbr-outcomes@icann.org and is a condition of future resource allocations, if any.

Pilot Project III: FY18 Special Request for RALO real-time captioning of Adobe Connect meetings, in EN, ES and FR.

This is a continuation of our current pilot program of captioning for 5 RALO and/or ALAC monthly meetings, and/or 5 Working Group meetings or webinars over a 6 month period in FY18.

Our goal in this continuation of the pilot is to provide real-time captioning for either 5 RALO meetings a month or 4 RALO and 1 ALAC meeting, and/or 5 working group meetings or webinars a month to enable full participation of all At-Large Users within ICANN. An additional objective of this third phase of the pilot is to test the concept for the implementation of a permanent captioning program to replace the transcription program currently available. The metrics obtained from the second phase of the captioning pilot clearly indicates strong support for captioning.

- More than 91% described captioning as either extremely helpful or helpful.
- More than 75% indicated the ability to understand the session more effectively
- More than 54% had a greater understanding of the topics

The standard of captioning is now at such a high level that it is effectively a transcript. Captioning has the benefit of people being able to check facts and terminology during a call and thus being able to participate in a more informed manner. This is especially valuable for people whose primary language is not English, French or Spanish. On the WS2 Diversity call #9, 61% of participants stated that English was not their primary language. Most of the AFRALO call participants either did not have English as their primary language and/or had low bandwidth and 75% were able to understand the session more effectively and the topic better with captioning. This was even higher in the WS Diversity call at 84%. There were many comments about the advantage of being able to catch up especially if a speaker spoke quickly or the audio was not so clear.

We also want to raise awareness of the importance of including captioning whenever language support is offered. We are targeting RALO meetings since our goal is to increase engagement in ICANN within each of the respective regions. We are also targeting the working groups and webinars for the same reason as well as to promote more engagement from RALOs in these working groups. We think this will lead to more effective participation and engagement within ICANN. This is especially the case for people who are coming from bandwidth challenged countries where lack of bandwidth has limited their participation within ICANN. Adobe Connect is a large user of bandwidth and as such makes it difficult for those with limited bandwidth to fully participate. Adigo calls are helpful in that regard, but often in many places cell coverage is sparse and calls often drop or use up too much of a person's quota.

Participants were enthusiastic and wanted captioning on working group and CCWG calls while 50% of WS Diversity participants wanted captioning on all calls.

The goal of the pilot is to continue to gather the necessary metrics to illustrate the need for captioning not only for accessibility reasons but also for those with limited bandwidth and novice without a clear understanding about the terminology used in key ICANN meetings. The data gained from this third phase of the pilot should help us meet these goals and show the need for captioning ICANN wide. This next phase of the project intends therefore to extend the reach of captioning even further so that it meets the intended goals. This means offering more sessions with captioning including in French and Spanish and reaching out to any persons who have a hearing impairment. It would assist ICANN staff to evaluate the cost-effectiveness of captioning compared to the provision of transcripts after the call.

Approved Request: 5 meetings per month for a semester, 30 for semester for FY18.

Details

ICANN Org sees the value of this request, and has taken the budget for this pilot effort within the core policy development support team budget in FY18. Members of the Policy Development Support Team will collaborate with ICANN's Language Services Team and community proponents for this activity to continue this pilot effort in FY18. The goal of this effort will be to identify a framework for managing and implementing the program across more communities and ICANN work activities. Expected deliverable: a comprehensive ICANN Org report outlining how this service can be effectively rolled out and managed in FY19. Report to be delivered to ICANN Language Services Team by 30 November 2017.

Criteria

Criteria for "Real Time Transcription (RTT) Project

Criteria listed in order of priority. Requests for RTT have to meet at least one of these criteria to be put on the list for captioning.

- 1) Are there persons with disabilities or with limited bandwidth participating?
- 2) Are there webinars of general interest to the ICANN community that would increase the engagement of non-native English speakers?
- 3) Are the meetings or discussions about accessible tools or software?
