RDAP Pilot

Welcome to the RDAP pilot program community wiki space!

This community wiki space is for the ICANN community to collaborate on a voluntary pilot program for the Registration Data Access Protocol (RDAP) implementation. RDAP enables users to access current registration data and was created as a replacement for the WHOIS protocol.

The goal of this pilot program is to test upcoming features of the upcoming production RDAP service. The pilot program started on 5 September 2017.

All participants in the pilot program are encouraged to provide feedback by subscribing to the gTLD Tech mailing list. Registries and registrars must also complete the "Join the RDAP pilot" form below. Interested pilot users can view the list of RDAP pilot participants at the link below.

NEWS:

25 April 2019 - The working group published RDAP Pilot Report published

27 February 2019 - gTLD registries and registrars are required to implement an RDAP service by 26 August 2019

17 May 2018 - Temporary Specification for gTLD Registration Data that requires RDAP has been published

23 August 2018 – The Board of Directors of the ICANN voted to reaffirm the "Temporary Specification for gTLD Registration Data."

31 August 2018 - Proposed RDAP Profile was posted for Public Comment along with a set of documents that represent a step forward in the community's work on the RDAP.
